CDC suggests people should wear long-sleeved shirts, stop wearing shorts, stay indoors and even treat clothes with insecticide...

The Independent - SEPTEMBER 21, 2017 Comments

Estimated Range of *Aedes aegypti* in the United States, 2017

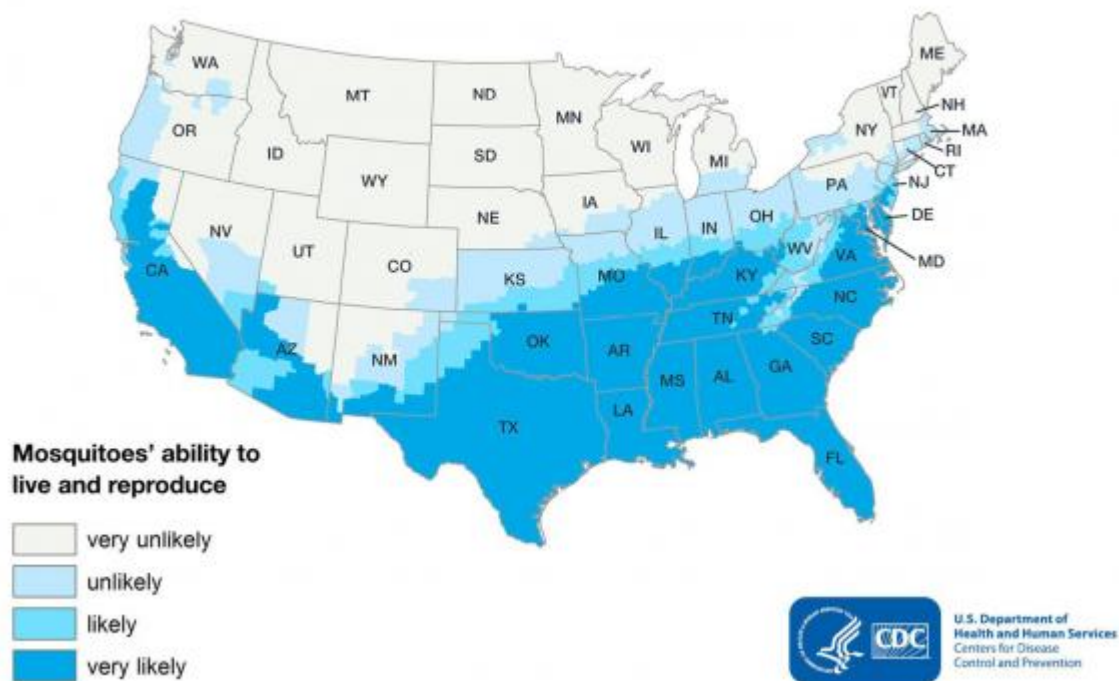

Mosquitoes capable of spreading serious and potentially deadly diseases such as Zika, dengue and yellow fever could invade about three-quarters of mainland United States, the US Centres for Disease Control and Prevention have warned.

The CDC, a US federal agency, has previously warned that climate change could affect human health in many ways including increasing the number of “disease carriers such as mosquitoes and ticks”

CARRIERS SUCH AS MOSQUITOES AND TICKS .

In a paper published in the Journal of Medical Entomology, it revealed maps showing areas where the habitat was suitable for two particular species of mosquito, *Aedes aegypti* or *Aedes albopictus* to survive.

Estimated Range of *Aedes aegypti* in the United States, 2017

A study found 71 per cent of counties in the 48 contiguous states were suitable for *aegypti* and 75 per cent could support *albopictus*.
