Eugene, Oregon

ACKNOWLEDGEMENTS

I am grateful for the assistance of many persons who reviewed this project in progress. George Kramer's comments regarding the database content and format were especially helpful. Judith Reese provided advice and assistance regarding Portland's building permits. James Hamrick reviewed early print-outs and offered encouragement. Sheila Klos and Christine Sundt reviewed the formats of the index/summaries. Christine Sundt also provided frequent assistance with the DataEase computer program. Joy Halliwell was extremely helpful in providing convenient access to microfilm. Cathy Wright and Joanne Halgren assisted in the search for missing issues. Steven Webber made my use of the Portland City Archives a pleasure. Lawrence Smith generously made accessible the archives of the *Daily Journal of Commerce*. Bill Loy assisted with the identification of Portland's districts. Al Urquhart assisted with historic maps of Portland and provided much personal encouragement and support. Finally, I wish to acknowledge the support of the University of Oregon and the School of Architecture and Allied Arts in providing the sabbatical leave which made this project possible.

An Index and Summary of Oregon Building Information
in the *Portland Daily Abstract* (1906-1910)

INTRODUCTION

Newspapers are among the best sources of historic information about Oregon's buildings, but most are unindexed and so tedious to research that they are often ignored. The indexing of these publications is an important goal for architectural historians and preservationists, and the highest priority should probably go to one related series of speciality publications whose major emphasis was the building activity throughout the state.

The *Portland Daily Abstract* was the earliest of these related publications that in 1925 evolved into the *Daily Journal of Commerce*. Together they contain more information about early twentieth-century building activity in Oregon than any other contemporary publications. During these newspapers' first quarter century the building industry was the dynamic center of economic and cultural life to an extent that is difficult to imagine today, and this building activity was the major emphasis of these papers' six daily issues per week. Architects, contractors, building materials and suppliers, and the buildings being designed and built were the major focus of front page articles and other features. Architects were the celebrities of the front-page.

Microfilm of the *Portland Daily Abstract* and the other newspapers which became known as the *Daily Journal of Commerce* exists at the Multnomah County Library in Portland and at the University of Oregon's Knight Library in Eugene.

Phase one of an index of the *Portland Daily Abstract*, described in this document, was conceived as much more than an index. The computer database was expanded to allow a much richer summary and analysis than would have been necessary for an index. Subsequent phases of the index should eventually extend this format to cover about twenty-five years, from the *Portland Daily Abstract's* beginning in mid-1906 until the year 1930, when building activity decreased dramatically and the *Daily Journal of Commerce* began to emphasize other aspects of commerce.

The initial phase of this project had three goals. First, was to develop the methodology and computer software. Second, was to record the data from an initial portion of the twenty-five year period; and third, was to print this data in formats that could be readily used by researchers. These goals have now been met. The first three and one-half years of the publication, from June of 1906 through December of 1909, are done. Four months in 1907 and some additional dates in these first years are missing from the database because the issues for these dates apparently no longer exist (see the "Methodology" section for details).

Most information for the database came from three locations within each issue of the newspaper. The most detailed information came from news articles located on page one. A list on the back page of each issue summarized the current projects and contracts in Architect's offices. The third location was a table on an inner page which listed Portland building permits. Additional information came from advertisements and other features. Some of this information was repeated daily for many issues without change. In these cases, only the earliest date was recorded in the database.

Information in the *Portland Daily Abstract* is so extensive that some limits had to be set concerning what would be included in the database. In general, only information that was related to Oregon was included. Many buildings in other Northwest states and elsewhere were

described, but they were not included unless an Oregon architect was reported to be the designer. An article about a stone quarry in Idaho would be included, since the stone might have been used in Oregon. Some articles were reprinted from other publications and had no information specifically about Oregon, but as an indication of the local awareness of new materials or processes, etc., these articles were also included.

Bridges, roads, and other purely engineering structures were not included, though they were extensively described. New buildings or building alterations which were reported to cost less than \$1000 were not included unless they were reported to be the work of a named architect or had some other special significance.

The database documents information about 9,774 specific buildings or structures, five landscapes, and one object. This includes 7,102 single-family houses, 107 churches, 336 commercial stores, 397 apartment buildings, 170 schools, and many additional categories of use. "Index/Summary Six" of this document contains a list of the buildings in the database sorted by categories of use, except for single-family houses which were so numerous that they were omitted. In addition to information about specific buildings, 1509 records in the database document other categories of information which are not related to a specific building; see Index/Summary One.

Some errors surely exist in this database. The quality of the microfilm was often poor and difficult to read, and errors existed in the newspaper as originally printed. Names of architects and contractors were often misspelled, so these were verified in directories and corrected in the database for consistent usage. It was beyond the scope of this project to similarly verify all names, addresses, and information, so other data is recorded as reported. However, a building was often referred to with different names and addresses, and these inconsistencies had to be identified and corrected if possible, in order to link the information in these articles for later sorting and analysis. This required the selection of the best name and address that could be determined without resort to outside references. Personal judgment was often necessary in this selection and in correcting other data that was entered into the database. Some of these decisions are noted on the "summary" line in the index/summaries, but the limited space on the database forms did not allow for full disclosure of all discrepancies between the original sources and the database. Therefore, researchers should verify all significant information in the original references and other sources.

Unlike a typical research product which is compiled from multiple sources, this database is compiled from one publication only, and the potential for errors is large. The database contains much information that is useful in its present state, but its primary value will be to researchers who will use this information as a first step in broader research that includes additional sources.

An Index and Summary of Oregon Building Information
in the *Portland Daily Abstract* (1906-1910)

INDEX/SUMMARIES:

There are eleven index/summaries which sort the data in the database in various ways:

- One** -- Topics other than specific buildings
- Two (A)** -- Buildings sorted by city and building names (Portland excluded)
- Two (B)** -- Portland buildings sorted by building names
- Three** -- Buildings sorted by names of architect/designers
- Four** -- Buildings sorted by names of contractors and other names
- Five** -- Buildings sorted by significant features
- Six** -- Buildings sorted by use (houses excluded)
- Seven** -- Portland buildings sorted by section and primary street
- Eight** -- Portland buildings sorted by section and second street
- Nine** -- Portland buildings sorted by section and third street
- Ten** -- Portland buildings sorted by district or addition (partial list)

Index/Summaries One, Two and Three contain the most complete references and information. Index/summaries Four through Ten contain partial information only, and it is necessary to look up the building's name in Index/Summary Two (A) or (B) for more complete information and references.

Index/Summary one includes information which does not refer to a specific building in a particular location. This distinguishes this index/summary from the other ten index/summaries, which are organized in reference to specific buildings in particular locations. This index/summary is more like a conventional index, and includes miscellaneous topics such as a description of a stone quarry or a meeting of an organization. A trip by an architect is referenced in this index/summary, but his buildings are listed and described in Index/Summary Three.

Additional information and instructions for using these index/summaries precede each index/summary.

An Index and Summary of Oregon Building Information
in the *Portland Daily Abstract* (1906-1910)

PROJECT METHODOLOGY

PORTLAND DAILY ABSTRACT

The *Portland Daily Abstract* was the first of a related series of newspapers that later became the *Daily Journal of Commerce*, which is still published in Portland today. Between 1912 and 1916 two similar newspapers co-existed with the *Portland Daily Abstract* in Portland. All five of the following publications were similar in content and should be included in this project's database up to the year 1930, when building activity slowed dramatically and reporting shifted to other commercial matters. At the University of Oregon, microfilm of these newspapers is boxed together with the *Daily Journal of Commerce*, except for the *Oregon Building Record*, which is boxed separately.

<i>Portland Daily Abstract</i>	(June 1906 to July 1916)
<i>Portland Daily Examiner</i>	(March 1912 to December 1913)
<i>Oregon Building Record</i>	(January 1914 to May 1916)
<i>Daily Record-Abstract</i>	(July 1916 to September 1925)
<i>Daily Journal of Commerce</i>	(October 1925 to present)

The current publisher of the *Daily Journal of Commerce* retains bound original issues which begin with the first issues of the *Portland Daily Abstract* in June, 1906. The Multnomah County Library in Portland retains original issues except for a few of the earliest years. No other original issues from the early years are known to exist. Microfilm of the above periodicals exists at the Multnomah County Library and the University of Oregon's Knight Library. The Oregon Historical Society Library does not include the earliest years in its microfilm. The Multnomah County Library and Knight Library microfilms were filmed at the University of Oregon and are identical. The quality of the microfilm is often poor, and many early issues are missing, especially in 1907.

The missing issues from the first two years of publication that are missing from the microfilm are also missing from the original issues stored at the *Daily Journal of Commerce* building in Portland. These missing issues apparently no longer exist anywhere. The missing material includes these dates:

- July 2, 4, and 27 (page 1 only), 1906
- August 29, 1906
- November 2, 1906
- January 5, 1907
- April 30, 1907
- May 30, 1907
- June 29, 1907
- the entire months of July, August, and September, 1907
- October 3, 4, and 19, 1907
- the entire month of November, 1907
- January 11, 1908
- June 30 (all pages after 4), 1909
- December 31 (all pages after 3), 1909

Several issues are missing on the microfilm but exist in the original issues stored at the *Daily Journal of Commerce* building. These issues were included in the database for this project, and

the source was noted on the index/summaries "summary" line as a "DJC copy" or with a similar note to indicate that it is not on the microfilm. The issues which are missing from the microfilm but exist in the DJC's storage include:

- August 7 through 20, 22, 26 (page 4 and 5 only), 1908
- August 25 through 28, 1908 are very bad copies on the microfilm
- November 5, 1908
- February 2 (page 4), and 3 (page 1), 1909
- March 13 (page 4), and 15 (page 1), 1909
- June 29 (page 3 not readable), 1909

Except for the few original issues that were used when no microfilm existed, all data for this database was entered into the computer from microfilm.

Another publication, the weekly *Pacific Builder and Engineer*, also began publication in 1906 and contains unindexed information which would be a desirable and compatible addition to this database. The *Pacific Builder and Engineer* has few of the long articles and details of the *Portland Daily Abstract* and the other predecessor newspapers to the *Daily Journal of Commerce*; but the *Pacific Builder* provides much information which is not in these other publications. It published weekly lists of building permits and other brief descriptions of building activity throughout the Northwest. This information is especially valuable for buildings that are not located in Portland, since Portland has retained its old building permit records and most other Oregon communities have not. The *Pacific Builder* provides the only surviving record of these permits and building activity for many communities. The 1906-08 volumes of the *Pacific Builder and Engineer* are available only at the University of Washington's Suzzallo Library. Volumes for 1909 and the following years are available at the Multnomah County Library in Portland and may be loaned through inter-library loan.

Future additions to the database should reconsider the most appropriate means of including data from the Portland building permits. These permits were listed in each issue of the *Portland Daily Abstract*, and this data was recorded in the database. The data listed for each permit was so brief, and the building often of so little significance, that it often seemed questionable whether to include these permits in the database. The importance of including this data is now clear however. It is not possible to always know during the data-entry process which data will prove useful and which will not, so future extensions of the database should continue to include all permits with a dollar value over an arbitrary minimal amount (\$1000 was used so far, but this should probably increase in later years). Some errors were made by the *Portland Daily Abstract* in reporting the permits. Future extensions of this database should use the more accurate and complete hand-written information on the original permit forms, which are available on microfilm reels at the Portland Building's first floor Permit Center. Duplicate reels can be purchased. These microfilm reels of Portland building permits were filmed in chronological order and are stored in a cabinet apart from the other permits and information which are filed by address. The address files often do not include the early permits, and the front desk employees who respond to public inquiries are usually unaware of the chronological microfilm reels, but they are available for public viewing.

No firm plan currently exists for the future continuation of this database. Grants may be available to continue the project in five-year increments. During the first phase of the project when procedures and software were being developed and tested, the author personally recorded all data in the database, making frequent changes to the computer forms and procedures as the project progressed. Now that the first phase is completed, subsequent recording of data can be accomplished by any person who is generally familiar with the subject matter and who exercises care. Recording and printing a five-year increment of the database will probably take such a person about 1 1/2 to 2 years. Persons interested in the continuation of this project, in more

information about the computer database and software applications, or in on-line use of the database should contact Michael Shellenbarger, School of Architecture and Allied Arts, University of Oregon. If Professor Shellenbarger is unavailable, contact Christine Sundt, slide librarian at the School of Architecture and Allied Arts branch library. To use the database on-line, the user must have a 286-type computer or better, and the Dataease program.

COMPUTER DATABASE

An IBM-compatible 386 computer was used for this relational database. "DataEase" software was the database program, and all applications were developed specifically for this project. Two primary data-collection forms were created; FORM ONE was a general index form for recording information that was not related to a specific building in a particular location. FORM TWO recorded information that was related to a specific building in a particular location. FORM TWO is much more complex than FORM ONE, primarily to allow for information about the location and description of the building. The database contains 1509 records on FORM ONE and 12,074 records on FORM TWO. The FORM TWO records contain information about 9772 buildings and structures, five landscapes, and one object.

Eight additional forms provide related data about architects and contractors, building uses, index categories, conversion of Portland street names, etc. Names of Districts are recorded on 278 records. Names and data about architects are recorded on 420 records. Names and data about contractors and other persons are recorded on 2379 records. Portland street name changes require 3674 records. This highly integrated set of forms allowed many data-entry operations to be performed automatically and insured consistent usage and spelling.

Data was entered chronologically by the dates of the *Portland Daily Abstract*, except for the few issues that were missing from the microfilm and were added later from the original paper issues. When the building's name was entered, the computer immediately searched for records with the same name. Previous records with this name could then be displayed to verify that the name was used only for records about the same building. Often, however, earlier records about the same building used a somewhat different name, and the computer operator could search for these records using other likely names and location information. Related records which were not found at this time would usually be located later by inspection of lists which sorted the records in the database by location. Building names were then changed to be identical on all related records. It was important to identify records which applied to the same building so that the information in related records would be grouped together under the same name in the index/summaries.

Space was provided on each form for entering two separate references. This saved computer storage space when the second reference continued the first or added little new information. However, when two references occur on the same form, some minor confusion results. Illustrations were rare, but if one is noted, it is not clear which of the two references has it. The "Building Status" field reports the more recent status. The "summary" line is followed by a word in brackets which indicates the amount of additional information that is contained in the references, but it is not clear which reference contains this amount of information.

When a Portland street address was entered, the computer automatically searched 3674 records which recorded changes in street names. The current street name was then entered automatically. If an old street name had more than one current name, the computer displayed the available choices plus information to assist in selecting the appropriate choice. Historic maps of Portland were very helpful in identifying street changes and choices. When the complete street address was entered, the computer automatically determined the proper section

designation (NE, SW, etc.) for each street. Appendix A. is a list of Portland street name changes compiled for this project, and includes a bibliography of maps.

There are many other features of the database that substantially reduced the amount of time necessary to accurately record information. It does not seem necessary to fully describe all of these features and forms however. Some lists of the choices that were developed for fields on FORM TWO may be of interest. For the "Architect/Designer's role," these choices were available:

- | | |
|---------------|---------------|
| • design | • contracting |
| • co-design | • may design? |
| • consultant | • maybe role? |
| • interviewee | • unclear |
| • competitor | |

For the "Project Type" field of FORM TWO, the following choices were available. "Presume new" was often selected, since reported descriptions often implied that the project was new construction, without clearly stating so. "New" seemed potentially misleading under such circumstances, and its use was reserved for work that was reported as new work.

- | | |
|-----------------------|----------------------|
| • new | • landscape |
| • alteration/addition | • new and alteration |
| • presume new | • building moving |
| • other | • demolition |
| • new or alteration? | • partial raze |

Choices for the "Building Use" field on FORM TWO were adapted from a list used by the Oregon State Historic Preservation Office. The complete list of uses developed for the database appears at the beginning of Index/Summary Six. Choices were added to this list during the data-entry process as needed. Information in the *Portland Daily Abstract* was not always adequate to select a precise use. For example, a building's use was sometimes described as "barn", without additional information which would categorize it as "agriculture/barn". Consequently, both of these categories were available for use. Similarly, "garage" and "automobile garage" both appear. "Mill" categories were not always clear. See Index/Summary Six for lists of the buildings in the database sorted by use.

For the "Building Status" field of FORM TWO, the following choices were available:

- | | |
|--------------------------|-----------------------|
| • intends to build | • status unclear |
| • architect interview | • damaged |
| • architect selected | • razed or destroyed |
| • designer interview | • destroyed by fire |
| • designer selected | • to be razed |
| • design not begun | • damaged by fire |
| • design in progress | • moved to new site |
| • plans are ready | • no intent to build |
| • soon out to bidders | • description/history |
| • in bidding process | • to be moved |
| • contract awarded | • not built |
| • building permit issued | • being razed |
| • under construction | • building deferred |
| • construction done | • to partially raze |
| • construction done? | |
| • built; unclear when | |

An Index and Summary of Oregon Building Information
in the *Portland Daily Abstract* (1906-1910)

INDEX/SUMMARY ONE -- TOPICS OTHER THAN SPECIFIC BUILDINGS

Instructions:

This index/summary includes information which does not refer to a specific building in a particular location. This distinguishes this index/summary from the other ten index/summaries, which are organized in reference to specific buildings in particular locations. This index/summary is more like a conventional index, and includes miscellaneous topics such as a description of a stone quarry or a meeting of an organization. A trip by an architect is referenced in this index/summary, but his buildings are listed and described in Index/Summary Three. The data for Index/Summary One is recorded on 1509 records in the database. Many references are indexed under more than one heading. All index/summaries include a one-line summary of the contents of the reference, followed by a one-word note [+ "*much*", "*some*", "*minor*", or "*none*"] which indicates how much additional information is contained in the referenced documents. The index topics include:

- Architectural League of the Pacific Coast
- Architects - California
- Architects - Oregon
- Architects - Washington
- Architectural practice
- Architecture, styles
- Artists/craftsmen - Portland
- Bathing - Portland
- Builders and developers - Portland
- Building and materials, asbestos
- Building and materials, brick
- Building and materials, brick, tile, ceramic
- Building and materials, cement and concrete
- Building and materials, ceramic tile
- Building and materials, elevators
- Building and materials, escalators
- Building and materials, glass
- Building and materials, industrialized building
- Building and materials, iron and steel
- Building and materials, lime
- Building and materials, masonry (general)
- Building and materials, mechanical/electrical
- Building and materials, metals
- Building and materials, miscellaneous
- Building and materials, plaster and stucco
- Building and materials, roofing
- Building and materials, sheet metal
- Building and materials, stone
- Building and materials, terra cotta
- Building and materials, windows and doors
- Building and materials, wood
- Building contracts, specifications
- Building inspection - Portland

Building laws - Portland
Building permits - Portland
Building statistics - Northwest
Children, facilities for
City planning
Columbia Beach - growth & development
Construction equipment
Contractors - Oregon
Contractors - Portland
Coos Bay, Oregon (Marshfield)
Cottage Grove - growth & development
Engineers - Portland
Eugene - growth & development
Fires and fire protection - Canada
Fires and fire protection - Portland
Fires and fire protection - United States
Government Camp - growth & development
Harrisburg - growth & development
Interior decoration - residential
Labor strikes & disputes - Portland
Minorities and women, Chinese
Minorities and women, Indians, American
Minorities and women, Irish
Minorities and women, Italians
Minorities and women, women
Oregon - growth & development
Polk County, Oregon - growth & development
Portland (region) - growth & development
Portland - bibliography
Portland - districts, additions
Portland - growth & development
Portland - street car lines
Portland - streets
Portland Architectural Club
Portland Association of Architects
Publications, building
Real estate - investment
Roads and Highways - Oregon
Salem - growth & development
Seaside - growth & development
Sunset Beach - growth & development
Trains - Oregon Electric RR
Warrenton - growth & development
Woodburn - growth & development

**INDEX/SUMMARY ONE -
TOPICS OTHER THAN SPECIFIC BUILDINGS**

Blue Diamond Pressed Stone Co. bankrupt; sell Sellwood plant, foot of Marion St. [+ some]
{03/18/09 p05,c3 Bids for}

concrete expert committee

William L. Grondahl, R. L. Donald, J. W. Moffatt, to examine E. 28th St. bridge [+ some]
{12/03/08 p01,c3 Concrete}

concrete piling

Mitchell-Lewis Staver bldg., Morrison & 2nd, has Portland's 1st concrete piling [+ minor]
{06/13/06 p01,c3 Concrete }

for Portland Mitchell... warehouse; cast in driven metal tubes; withdrawal stuck [+ some]
{08/31/06 p01,c4 Interest.} and {09/05/06 p01,c4 Has Firm}

incorporated by Thomas Bilyeu, J. M. Crook, David Loring; make and drive piles [+ some]
{06/06/08 p01,c3 Files}

Portland Concrete Pile & Equip. Co. incorporated; patented collapsible forms [+ much]
{07/22/08 p01,c3 New}

absolutely immune from decay; now most used foundation for heavy struc. in East [+ much]
{07/23/08 p01,c4 About}

seven years ago were unknown; today use is becoming widely extended [+ some]
{07/28/08 p01,c4 More}

Portland Concrete Pile & Equip. Co. adver.; drawing of pile form; quick; cheap [+ some]
{08/24/08 p06,c1 An oppor.} *Illustration: other*

Portland Conc. Pile & Equip. Co. expand nationally; new pile methods profitable [+ much]
{06/08/09 p01,c3 Concrete}

Portland Conc. Pile...Co. growing rapidly; in Galveston, Texas; new equipment [+ much]
{10/01/09 p01,c3 Concrete}

concrete reinforcing

concrete contractor advocates twisted rods, and speculates about pipe reinforc. [+ much]
{06/11/07 p01,c4 concrete}

Kahn system reinforcing planned for 5 story Hotel (Marshfield, Himebaugh) [+ some]
{01/17/08 p01,c4 Marshfld.}

General Fireproofing Co. reinforcing in San Francisco, Portland Public Market [+ much]
{12/31/08 p01,c4 Steel for}

concrete shingle

Albert Voigt, Portland, patents cement shingle, indestructible and fire proof [+ some]
{12/26/07 p01,c3 A New}

concrete tiles

Cement Products Co. incorporated, Portland; for brick, block, cast stone, tiles [+ some]
{08/10/06 p01,c4 New}

concrete water pipe

Engineer Grondahl advocates; durable; wood, iron, steel inferior; [no microfilm] [+ much]
{08/13/08 p01,c4 Sensible}

concrete wharves

proposed by local engineers Bilyeu and Grondahl; permanent, no maintenance [+ much]
{09/09/08 p01,c4 Concrete} *Illustration: other*

INDEX/SUMMARY ONE - TOPICS OTHER THAN SPECIFIC BUILDINGS

Format: *Index topics [also see Index/Summaries 3, 4, and 5]*

Summary [+ more information in references: none, minor, some, much]

{references in Portland Daily Abstract: date, page & column number, heading} Illustration?

Crowe, F. T., & Company

supplies Atlas, Western States, Portland & Mankato Bricklayers' Cement, lime... [+ *some*]
{10/01/07 p01,c4 F. T.}

durability

architect Ernest Kroner predicts Portland's concrete bldgs. will last 5000 years [+ *some*]
{02/11/07 p01,c3 Durabil.}

Dyer Molding Machine Company

new co.; plant in Kenton; makes concrete blocks, etc.; owner trained in England [+ *much*]
{08/28/08 p01,c3 Cement}

Elbram cast "marble"

Pacific Brick & Marble Co. to make; durable, cheap; for wainscots, floors, etc. [+ *much*]
{04/26/09 p01,c4 New} and {05/25/09 p01,c4 A New}

Elliott-Regan Company

makes cast stone, conc. blocks; no factory, makes on site; co. formed June, 1907 [+ *much*]
{10/07/07 p08,c5 Elliott-} and {10/11/07 p04,c3 Elliott}

fire test results

Underwriter's labs report on low heat transmission, failure of concrete block [+ *some*]
{08/25/09 p01,c3 Brick}

foundations

report from US Geological Survey that cement foundations are the most durable [+ *minor*]
{06/07/06 p01,c2 Cement}

freeze protection, new concrete

"huge bonfires are kept burning night and day in newly excavated basements" [+ *some*]
{12/24/09 p01,c4 Central}

Ideal Concrete Construction Co.

incorporated Febr. 21 to make cement blocks, brick, cement, construct buildings [+ *much*]
{03/14/08 p01,c4 New}

imported cement to Oregon

three ships of cement from Sweden on the way to Portland; cement famine to end [+ *minor*]
{06/04/06 p01,c3 Cement}

Portland cargos of cement expected from Europe and on each Asiatic steamer [+ *minor*]
{07/03/06 p01,c3 Cement}

Aragonia arrived in Portland from Orient with 10,000 barrels of cement; more due [+ *minor*]
{07/09/06 p01,c3 Cement}

Nicomedia arrived in Portland July 22 with 10,000 barrels of Asano cement [+ *minor*]
{07/24/06 p01,c4 Cement}

French barque Laennee arrived at Astoria with 18,000 barrels cement for Portland [+ *minor*]
{08/08/06 p04,c4 Cement}

10,000 barrels from Heidelberg, Germany to Portland; 300 for Markell Building [+ *some*]
{01/07/07 p01,c3 Big}

INDEX/SUMMARY ONE - TOPICS OTHER THAN SPECIFIC BUILDINGS

England first, then Holland, Germany, Belgium; now England; Or. & Cal. potential [+ *some*]
 {04/08/07 p01,c3 Lime and}
 ship arrivals from Rotterdam with 20,000 barrels, and Antwerp with full cargo [+ *minor*]
 {04/09/07 p01,c3 Cement}
 D. B. Rate & Co. adv.: Portland Cement Werk, Schifferdecker & Sohne, Heidelberg [+ *minor*]
 {05/10/07 p01,c1 D. B.}
 5 ships w/brands: Dragon, Chain, Budenheim, Rhinoceros (English), Elsa, Vise [+ *some*]
 {01/16/08 p01,c4 Cement}
 W. P. Fuller brands: Dragon, Chain, Budenheim, Rhinoceros (English), Elsa, Vise [+ *some*]
 {01/22/08 p01,c1 Cement}
 Portland used 500,000 barrels of imported cement in 1907; 300,000 barrels coming [+ *much*]
 {01/28/08 p01,c3 Regarding}
 Italian ship with cement from Hamburg in port; returning to Italy with wheat [+ *some*]
 {06/20/08 p01,c4 Why So}
 Chain, Stronghold, and Anchor brands (City of Portland approved) from importers [+ *some*]
 {07/22/08 p06,c5 Cement}

imported cement to U. S.

import of German cement to U. S. now almost ceased, due to American rotary-oven [+ *some*]
 {02/18/08 p01,c4 American}

lime

500 barrels daily from Roach Harbor, San Juan Island, Puget Sd.; 5000 barrel/mo. [+ *some*]
 {05/08/07 p01,c3 Building} and {01/31/08 p01,c3 Lime}

Marshall Brothers, Portland

advertisement: everything in cement constr.; plain, ornamental, reinforc. blocks [+ *some*]
 {08/23/09 p07,c5 Marshall}

national manufacturers combine

Northern American Cement Company forms association of manufacturers, markets [+ *much*]
 {10/08/08 p01,c3 \$10,00...}

Parrish & Thompson

maker of conc. blocks, ornaments, succeeded by Thompson, Clayfield & Froedsen [+ *some*]
 {09/28/08 p01,c4 Thompson}

Portland Cement plant, Portland

to build Portland plant within a year; 1000 barrels/day; [not on microfilm] [+ *some*]
 {08/20/08 p01,c3 Local}

Portland Cement required by law

new Portland ordinance requires Portland Cement in all buildings; height limits [+ *much*]
 {01/18/09 p01,c4 Interest}

Portland Cement supply

est. 100,000 barrels in Portland now; Nottingham & Co. expects big June cargo [+ *minor*]
 {03/15/07 p01,c3 Building}

Portland Concrete Pile...Co.
