NOTICE OF ADOPTED AMENDMENT

12/23/2010

TO: Subscribers to Notice of Adopted Plan  
or Land Use Regulation Amendments

FROM: Plan Amendment Program Specialist

SUBJECT: City of Pendleton Plan Amendment  
DLCD File Number 007-10

The Department of Land Conservation and Development (DLCD) received the attached notice of adoption. Due to the size of amended material submitted, a complete copy has not been attached. A Copy of the adopted plan amendment is available for review at the DLCD office in Salem and the local government office.

Appeal Procedures\*

DLCD ACKNOWLEDGMENT or DEADLINE TO APPEAL: Tuesday, January 04, 2011

This amendment was submitted to DLCD for review prior to adoption with less than the required 45-day notice. Pursuant to ORS 197.830(2)(b) only persons who participated in the local government proceedings leading to adoption of the amendment are eligible to appeal this decision to the Land Use Board of Appeals (LUBA).

If you wish to appeal, you must file a notice of intent to appeal with the Land Use Board of Appeals (LUBA) no later than 21 days from the date the decision was mailed to you by the local government. If you have questions, check with the local government to determine the appeal deadline. Copies of the notice of intent to appeal must be served upon the local government and others who received written notice of the final decision from the local government. The notice of intent to appeal must be served and filed in the form and manner prescribed by LUBA, (OAR Chapter 661, Division 10). Please call LUBA at 503-373-1265, if you have questions about appeal procedures.

\*NOTE: The Acknowledgment or Appeal Deadline is based upon the date the decision was mailed by local government. A decision may have been mailed to you on a different date than it was mailed to DLCD. As a result, your appeal deadline may be earlier than the above date specified. NO LUBA Notification to the jurisdiction of an appeal by the deadline, this Plan Amendment is acknowledged.

Cc: Evan MacKenzie, City of Pendleton  
Gloria Gardiner, DLCD Urban Planning Specialist  
Grant Young, DLCD Regional Representative  
Bill Holmstrom, DLCD Transportation Planner

FORM 2

DLCD

# Notice of Adoption

In person  electronic  mailed

DATE  
STAMP

DEPT OF

DEC 17 2010

LAND CONSERVATION  
AND DEVELOPMENT  
For Office Use Only

This Form 2 must be mailed to DLCD within **5-Working Days after the Final Ordinance is signed** by the public Official Designated by the jurisdiction and all other requirements of ORS 197.615 and OAR 660-018-000

Jurisdiction: **City of Pendleton**

Local file number: **AMD10-03 / Ord. 3806**

Date of Adoption: **12/07/2010**

Date Mailed: **12/14/2010**

Was a Notice of Proposed Amendment (Form 1) mailed to DLCD?  Yes  No Date: 08/20/2010

Comprehensive Plan Text Amendment

Comprehensive Plan Map Amendment

Land Use Regulation Amendment

Zoning Map Amendment

New Land Use Regulation

Other: **TSP Amendment**

Summarize the adopted amendment. Do not use technical terms. Do not write "See Attached".

Adoption of an Interchange Area Management Plan (IAMP) for Interstate 84 Exit 209 (at US395). Plan will result in reconfiguration of intersections immediately north and south of the interchange, with associated direct and indirect impacts on abutting properties, including new access management. Impacts will require eventual condemnation of entire parcels or portions thereof as identified in Plan documents. No impacts will occur until financing is available for improvements.

Does the Adoption differ from proposal? No, no explanation is necessary Minor refinements only.

Plan Map Changed from: **n/a**

to: **n/a**

Zone Map Changed from: **n/a**

to: **n/a**

Location: **In vicinity of Interstate 84 exit 209**

Acres Involved: **n/a**

Specify Density: Previous: **n/a**

New: **n/a**

Applicable statewide planning goals:

**1** **2** **3** **4** **5** **6** **7** **8** **9** 10 11 12 13 14 15 16 17 18 19

Was an Exception Adopted?  YES  NO

Did DLCD receive a Notice of Proposed Amendment...

45-days prior to first evidentiary hearing?

Yes  No

If no, do the statewide planning goals apply?

Yes  No

If no, did Emergency Circumstances require immediate adoption?

Yes  No

DLCD file No. 007-10 (18484) [16458]

## **ADOPTION SUBMITTAL REQUIREMENTS**

**This Form 2 must be received by DLCD no later than 5 days after the ordinance has been signed by the public official designated by the jurisdiction to sign the approved ordinance(s)**  
per ORS [197.615](#) and OAR [Chapter 660, Division 18](#)

1. This Form 2 must be submitted by local jurisdictions only (not by applicant).
2. When submitting, please print this **Form 2** on light **green paper if available**.
3. Send this Form 2 and One (1) Complete Paper Copy and One (1) Electronic Digital CD (documents and maps) of the Adopted Amendment to the address in number 6:
4. **Electronic Submittals: Form 2 – Notice of Adoption will not be accepted via email or any electronic or digital format at this time.**
5. The Adopted Materials must include the final decision signed by the official designated by the jurisdiction. The Final Decision must include approved signed ordinance(s), finding(s), exhibit(s), and any map(s).
6. **DLCD Notice of Adoption must be submitted in One (1) Complete Paper Copy and One (1) Electronic Digital CD via United States Postal Service, Common Carrier or Hand Carried to the DLCD Salem Office and stamped with the incoming date stamp.** (for submittal instructions, also see # 5)] **MAIL the PAPER COPY and CD of the Adopted Amendment to:**

**ATTENTION: PLAN AMENDMENT SPECIALIST  
DEPARTMENT OF LAND CONSERVATION AND DEVELOPMENT  
635 CAPITOL STREET NE, SUITE 150  
SALEM, OREGON 97301-2540**

7. Submittal of this Notice of Adoption must include the signed ordinance(s), finding(s), exhibit(s) and any other supplementary information (see [ORS 197.615](#) ).
8. Deadline to appeals to LUBA is calculated **twenty-one (21) days** from the receipt (postmark date) of adoption (see [ORS 197.830 to 197.845](#) ).
9. In addition to sending the Form 2 - Notice of Adoption to DLCD, please notify persons who participated in the local hearing and requested notice of the final decision at the same time the adoption packet is mailed to DLCD (see [ORS 197.615](#) ).
10. **Need More Copies?** You can now access these forms online at <http://www.lcd.state.or.us/>. You may also call the DLCD Office at (503) 373-0050; or Fax your request to: (503) 378-5518.

**ORDINANCE NO. 3806**

**AN ORDINANCE AMENDING ORDINANCE NO. 3442 (THE COMPREHENSIVE PLAN), ORDINANCE NO. 3743 (THE TRANSPORTATION SYSTEM PLAN), AND ORDINANCE NO. 3250 (THE ZONING ORDINANCE) THROUGH ADOPTION OF THE "I-84/US395 INTERCHANGE AREA MANAGEMENT PLAN" (IAMP).**

**Whereas,** The City of Pendleton Comprehensive Plan was adopted in 1983 and updated in 1990, and;

**Whereas,** The Transportation System Plan (TSP) was adopted in 1996 and updated in 2007 and constitutes the Goal 12 (Transportation) element of the Comprehensive Plan, and;

**Whereas,** Adoption of the Exit 209 IAMP does not have the potential to result in trip generation that will exceed existing growth assumptions, and;

**Whereas,** Adoption of the IAMP will result in (potential) trip generation that is either unchanged or reduced relative to what might be contemplated under the base zones, and;

**Whereas,** No significant impact to any existing or proposed transportation facility is anticipated; no new residential/commercial/industrial development could be permitted as a result of approval that would necessitate upgrades to existing facilities or new unplanned facilities, and;

**Whereas,** The proposal has the potential to reduce principle reliance on the automobile by improving facilities and connections for people who may use other modes such as walking and bicycling, and;

**Whereas,** No specific conditions of approval are necessary in order to insure compliance with the TPR or the City of Pendleton TSP, and;

**Whereas,** The Plan itself is an amendment to the City of Pendleton Comprehensive Plan Goal 12 element; no further amendments are proposed or warranted, and;

**Whereas,** The request complies with Goal 12 (the Transportation Planning Rule), and;

**Whereas,** The proposal is consistent with the standards and criteria for an amendment to the Comprehensive Plan, because it implements the Goals and Policies outlined in the Transportation System Plan. As a legislative amendment to the Comprehensive Plan, any ordinance adopted by the City Council and not appealed shall by its very nature be consistent with the Plan, and;

**Whereas,** The proposal is consistent with the standards and criteria for an amendment to the Zoning Ordinance, because it complies with the provisions of the City of Pendleton Transportation System Plan. Adoption of the IAMP will not permit new land uses or levels that are inconsistent with the functional classification of an existing or planned transportation facility, and;

**Whereas,** Specific conditions are not necessary to ensure that approval of this request will protect the best interests of the property owner(s), surrounding property or neighborhood, and/or the City as a whole.

**NOW, THEREFORE, THE CITY OF PENDLETON ORDAINS AS FOLLOWS:**

1. The I-84/US395 Interchange Area Management Plan (IAMP), attached as “**Exhibit A**” hereto is adopted as Appendix E to the City of Pendleton Transportation System Plan.
2. The City of Pendleton Zoning Ordinance (Ordinance #3250, as amended) is hereby amended as recommended in the September 16, 2010 letter from Angelo Planning Group, attached as “**Exhibit B.**”

**ARTICLE XXIII. I-84 EXIT 209 INTERCHANGE OVERLAY DISTRICT (IOD)**

**SECTION 175. PURPOSE**

The purpose of the Exit 209 Interchange Overlay District (Exit 209 IOD) is the long-range preservation of operational efficiency and safety of the I-84/US 395 Interchange. “The transportation function of the I-84/US 395 Interchange is principally to provide safe and efficient access to downtown Pendleton and the commercial and residential areas south of I-84, including local traffic traveling between these two areas. In addition to this primary function, the I-84/US 395 Interchange remains an important facility for accessing the Eastern Oregon Correctional Facility, Blue Mountain Community College, the residential areas north of downtown, and the planned relocation of St. Anthony Hospital. The interchange also serves regional traffic coming from/going to US 395 south of Pendleton, and both OR 11 and OR 37 north of downtown.”

**SECTION 176. APPLICABILITY**

The provisions of this Article shall apply to any administrative, quasi-judicial, or legislative land use application for a parcel wholly or partially within the Exit 209 IOD, as defined in this section. These provisions shall apply to all new development and redevelopment applications that meet one or more of the following conditions:

- a) New residential, commercial, public/institutional or industrial development.
- b) Expansion of single-family or duplex residential development valued in excess of thirty (30%) percent of the most recent assessed value of the improvements on the property.
- c) Reconstruction of a single-family or duplex residential casualty loss valued in excess of one hundred thirty (130%) percent of the most recent assessed value of the structure.
- d) Expansion of multiple family, commercial, public/institutional or industrial development valued in excess of fifteen (15%) percent of the most recent assessed value of the improvements on the property.
- e) Reconstruction of multiple family, commercial, public/institutional or industrial casualty loss in excess of one hundred fifteen (115%) percent of the most recent assessed value of the structure.
- f) Change in use (occupancy class) of a building as defined by the Uniform Building Code. Development values within this section shall be determined by the City Manager based on the Building Valuation Data published and updated periodically by the State of Oregon Building Codes Agency for use in determining building permit valuations and the records of the Umatilla County Assessor’s Office. Any conflict between the standards of the IOD and those contained within other chapters of the Zoning or Subdivision Ordinance shall be resolved in favor of the IOD. The boundary of the Exit 209 IOD is shown on the Pendleton Comprehensive Land Use Plan Map and Zoning Map.

**SECTION 177. PERMITTED LAND USES**

Uses permitted outright or conditionally in the underlying zoning district are permitted subject to other applicable provisions in the Zoning and Subdivision Ordinance.

#### **SECTION 178. ACCESS MANAGEMENT**

In addition to the requirements of OAR 734-051, parcels wholly or partially within the Exit 209 IOD are governed by the Access Management Plan in the I-84/US 395 Interchange Area Management Plan (IAMP). The following applies to all land use and development applications for parcels within the IAMP Overlay District as defined in Section 98 A Access Approval

1. Access to local streets within the Exit 209 IOD shall be subject to joint review by the City and the Oregon Department of Transportation (ODOT). Coordination of this review will occur pursuant to Section 102.
2. Approval of an access permit is an administrative action and is based on the standards contained in this Article and the Access Management Plan in the I-84/US 395 IAMP

#### **SECTION 179. SUPPLEMENTAL TRANSPORTATION SYSTEM DEVELOPMENT CHARGE**

Development or redevelopment of parcels within the IOD will be assessed a Supplemental Transportation System Development Charge (STSDC) that will be dedicated to transportation improvements in the vicinity of the I-84/US 395 Interchange, as identified in the adopted I-84/US 395 IAMP. The STSDC will be based on weekday p.m. peak hour trips generated by a proposed development and calculated pursuant to TIS requirements in Ordinance 3481 (Building Standards), Section 5 of the City's code, and referred to in Section 102.

#### **SECTION 180. ADMINISTRATION**

This section establishes the responsibilities of the City and ODOT to monitor and evaluate vehicle trip generation and impacts on the I-84/US 395 Interchange from development approval under this section.

- A. Transportation Assessment Report. For all development applications subject to Section 98 of this Article and located within the Exit 209 IOD, the applicant shall prepare and submit to the City a Transportation Assessment Report that documents the following:
  1. Expected weekday p.m. peak hour trip generation.
  2. Identifies how the development complies with the IAMP and what off-site improvements will be constructed as part of the development.
  3. Reviews proposed site-access driveways and streets to ensure compliance with the IAMP Access Management Plan/Strategy and that adequate intersection sight distance and traffic control will be provided.
  4. Reviews on-site parking and circulation plan to ensure safe and efficient travel for all modes of travel and includes AutoTurn analyses for anticipated trucks and emergency service vehicles.
- B. Transportation Impact Study
  1. A Transportation Impact Study (TIS) shall be required for all zone change and comprehensive plan amendments that result in an increase in trips as compared to uses permitted under the existing designation and for all development applications for parcels partially or wholly within the Exit 209 IOD.
  2. The TIS shall be developed according to the requirements of Section 5 (Development Requirements) of Ordinance 3481 (Construction and Building), shall document all elements required as part of the Transportation Assessment Report, Section 102(A) of this Article, and shall demonstrate the level of impact of the proposed development on the surrounding street system and the I-84/US 395 Interchange.
  3. The scope of the TIS and determination of impact or effect shall be coordinated with the City of Pendleton and ODOT.

#### C. Agency Coordination

1. The City shall not deem the land use application complete unless the application includes a Traffic Assessment Report or, if required, a TIS prepared in accordance with the requirements of Section 5 (Development Requirements) of Ordinance 3481 (Building Standards).
  2. The City shall provide written notification to ODOT once the application is deemed complete. This notice shall include an invitation to ODOT to participate in the City's site review meeting(s), pursuant to City pre-application requirements.
  3. ODOT shall have at least 10 days, measured from the date the notice to agencies was mailed, to provide written comments to the City. If ODOT does not provide written comments during this 10-day period, the City staff report will be issued without consideration of ODOT comments.
- D. **Monitoring Responsibilities.** The details of City monitoring responsibilities will be established in the I-84/US 395 Interchange Area Supplemental Transportation SDC (STSDC) Ordinance and the approved I-84/US 395 IAMP City of Pendleton/Oregon Department of Transportation Intergovernmental Agreement (IGA).
1. The City will develop an Annual IAMP Report that details program management issues and recommends index adjustments to the STSDC rates for the coming year. The City will provide the Annual IAMP Report to ODOT to allow for coordination of management issues, such as updating the monitoring process and the timing for the next IAMP update.
  2. The agencies will review the IAMP pursuant to the review triggers. This review shall be conducted through a meeting initiated by the City of Pendleton or ODOT and shall include all affected agencies.
  3. IAMP review triggers may be based on criteria such as set time periods, queuing thresholds, and alternative mobility standards. They shall be specified in the implementation section of the IAMP and in the City/ODOT IGA.

#### IAMP Review Triggers

- a. Periodically, the implementation program shall be evaluated to ensure it is accomplishing the goals and objectives of the IAMP.
  - b. Events that will trigger an IAMP review include:
    - 1) Every fifth year from the date of IAMP adoption or latest update.
    - 2) Plan map and zone changes that have a "significant effect" per the Transportation Planning Rule and impact the I-84/US 395 Interchange, or that are located within the IOD.
    - 3) The 95th-percentile northbound left-turn queue at the existing SW Emigrant Avenue/SW 20th Street intersection backs past the I-84/US 395 Westbound ramp terminal.
    - 4) The 95th-percentile southbound left-turn queue at the US 395/SW Hailey Avenue-SW Tutuilla Creek Road intersection spills into the US 395 through lanes and backs up into the I-84/US 395 Eastbound ramp terminal.
  - 5) Mobility measures at the I-84 ramp terminals exceed the adopted alternative mobility standard of a volume-to-capacity ratio of 0.86 along US 395 from the I-84 Westbound ramp terminal to the realigned SW Hailey Avenue intersection.
4. In addition to the established triggers for IAMP review, the agencies can request a review of the IAMP at any time if, in their determination, specific land use or transportation changes warrant a review of the underlying assumptions and/or recommendations within the IAMP.
  5. If the participants in the IAMP review meeting agree that an IAMP amendment is not warranted after examining the impacts of the conditions that triggered the review, a recommendation of "no action" may be documented and submitted in the form of a letter to the City of Pendleton City Council and the Oregon Transportation Commission (OTC).

6. If the need for an update to the plan is found during IAMP review, review participants will initiate an IAMP update process. Initial steps in updating the IAMP will include scoping the planning process, identifying funding, and outlining a schedule for plan completion. Once completed, IAMP updates shall be required to be legislatively adopted as amendments to the City of Pendleton TSP and Comprehensive Plan and as an update to the OHP, requiring a City Council public hearing and an OTC hearing.

**SECTION 181. COMPREHENSIVE PLAN AND ZONING MAP AND TEXT AMENDMENTS**

This section applies to all Comprehensive Plan Map and Zoning Map amendments for parcels wholly or partially within the IOD and code amendments that affect development within the IOD.

A. Transportation Planning Rule Requirements. Applications for Comprehensive Plan amendments, Zoning Map amendments, or development regulation amendments shall determine whether the proposed change will significantly affect a collector or arterial transportation facility and must meet the requirements of Oregon Administrative Rule (OAR) 660-012-0060.

**PASSED** by the City Council and approved by the Mayor December 7, 2010.

# Memorandum

**Date:** September 16, 2010  
**To:** I-84/US 395 IAMP Project Team  
**From:** Shayna Rehberg, AICP  
Darci Rudzinski, AICP  
**Re:** I-84/US 395 Interchange Area Management Plan  
Proposed IAMP Policies and Code Amendments

---

## Overview

This memorandum presents proposed regulatory language that, once adopted, will be used to implement the I-84/US 395 Interchange Area Management Plan (IAMP). Proposed language is being provided in conformance with Oregon Administrative Rule (OAR) 734-051-0155(2), which states "prior to adoption by the Oregon Transportation Commission, the Department will work with local governments on any amendments to local comprehensive plans and transportation system plans and local land use and subdivision codes to ensure the proposed... Interchange Area Management Plan is consistent with the local plan and codes."

The IAMP and its implementing measures must also comply with the Transportation Planning Rule (TPR). The TPR requires that local governments adopt land use regulations consistent with state and federal requirements "to protect transportation facilities, corridors, and sites for their identified functions (OAR 660-012-0045(2))." To comply with OAR 734-051 and OAR 660-012 and ensure that local land use actions are consistent with the transportation facility planning within the IAMP, it is recommended that the City adopt policy language in the IAMP and a new section in its Zoning Ordinance for an interchange zoning overlay district.

## Overlay Districts

A zoning overlay district defines an area in which special regulations apply. The use and development standards of the underlying zoning district typically continue to apply, with the provision that if there is a conflict between the two districts, the overlay district shall prevail. In the case of interchange-related overlay districts, the special regulations tend to address additional access management and impact study requirements for the interchange area, in accordance with the TPR requirements that transportation facilities be protected for their identified function.

An additional transportation system development charge (SDC) may also apply in an interchange area but these requirements are established in a separate ordinance and not in the code language for the interchange overlay district. The applicable area for a supplemental transportation SDC may also have different boundaries than the overlay district.

## Adoption Process

As described in Section 8 of the IAMP, a legislative process for Comprehensive Plan text amendments will be required for the City of Pendleton to amend its Transportation System Plan (TSP) and Comprehensive Plan to incorporate the I-84/US 395 IAMP. As part of this legislative process, the City will also need to amend its Development Code (Zoning Ordinance) and it's

Comprehensive Plan Land Use Map and Zoning Map to include the new overlay district. The maps will be amended to reflect the interchange management study area (IMSA) as shown in Figure 1.

***For Discussion:** The IMSA to the south of the interchange currently extends to SW 30<sup>th</sup> Street. The IMSA is sufficient for purposes of determining access management, but does not capture the extent of the area where future development will likely occur. Given the development potential south of the current study area that would use the interchange, particularly the relocation of St. Anthony Hospital, the City may wish to extend the overlay district boundary to include land along the US 395 corridor and Tutuilla Road south to the city limits. Consideration should be given any new development on the south side of the interstate – generally addressed in 3481.*

This memorandum presents proposed and recommended policy and code language to be adopted as part of the IAMP process. As done above, where there are elements of the policy and code recommendations that need to be discussed or otherwise reviewed, those issues are identified by a change in font and in the subsections beginning “For Discussion” or “For Review.”

### **Proposed Policy Language**

The IAMP should include policy language that clearly states the function and purpose of the interchange. A statement of the function of the I-84/US 395 Interchange has been developed during the IAMP process in collaboration with the Technical and Public Advisory Committees. It is included in Section 8 of the IAMP, and once an adopted part of the City’s TSP and Comprehensive Plan, all subsequent land use actions will need to be consistent with this function and policy statement.

The transportation function of the I-84/US 395 Interchange is principally to provide safe and efficient access to downtown Pendleton and the residential and commercial areas south of I-84, including local traffic traveling between these two areas. In addition to this primary function, the I-84/US 395 Interchange remains an important facility for accessing the Eastern Oregon Correctional Facility, Blue Mountain Community College, the residential areas north of downtown, and the planned relocation of St. Anthony Hospital. The interchange also serves regional traffic coming from/going to US 395 south of Pendleton, and both OR 11 and OR 37 north of downtown.

Proposed policies may also identify strategies such as alternative mobility standards and trip allocations or budgets that serve to protect the identified function of the interchange. Trip allocations and budgets present more of an administrative burden, and in the case of the I-84/US 395 Interchange, it is recommended that only alternative mobility standards be adopted to assist in protecting interchange function.

While standard volume-to-capacity (v/c) ratios are established in the Oregon Highway Plan (OHP), there are cases in which more permissive or restrictive standards are needed to accomplish adopted transportation and land use goals. It is recommended that the following alternative mobility standards be incorporated into the IAMP implementation section and be adopted as part of the IAMP and, as a facility plan, as an amendment to the OHP.

- A volume-to-capacity ratio of 0.86 along US 395 from the I-84 Westbound ramp terminal to the realigned SW Hailey Avenue intersection.

### **Proposed Code Language for the City of Pendleton Development Ordinance**

Pursuant to the City’s existing Zoning Ordinance, site plan review is required primarily for multi-family housing development and development within some of the City’s special use zoning subdistricts such

as the Airport Industrial (AI) and Business Park (BP) subdistricts. The proposed Interchange Overlay District (IOD) would require site plan review for all development and redevelopment in the overlay district, so as to ensure the application of special access management and impact study requirements in the district.

*For Review: Currently, there is not a discrete and global section in the City's code regarding Site Plan Review or pre-application requirements. If these sections are developed in the future, references in the proposed IOD shall be updated.*

The City has existing adopted standards for traffic impact studies (TISs) in Ordinance 3481 (Building Standards), Section 5 (Development Requirements). A TIS is required for all development that is projected to have an impact on transportation corridors or intersections identified to be of local or regional significance. Intersections of significance include all intersections with arterial or collector roadway functional classifications as established in the City's TSP. These existing standards provide for extensive application of TIS requirements, and the overlay district should ensure universal application of these requirements for all development and redevelopment in the district. Redevelopment shall be defined in the code language in terms of the extent of redevelopment and its potential for generating traffic. Similarly, zone changes and/or Comprehensive Plan amendments would also be required to prepare and submit a TIS pursuant to the requirements and references in the new overlay district.

The recommended language also addresses TPR Section -0060, which requires that amendments to functional plans, acknowledged Comprehensive Plans, and land use regulations that significantly affect an existing or planned transportation facility ensure that the allowed land uses are consistent with the identified function, capacity, and performance standards of the facility.

Finally, to reflect the collaboration required in planning for and managing the interchange area, adopting the following recommended code language will codify how the City will coordinate with ODOT in reviewing land use and development applications in the Pendleton Interchange Overlay District. Monitoring and updates to the IAMP will occur according to specific terms established in the implementation section (Section 8) of the IAMP and an intergovernmental agreement (IGA) between the City of Pendleton and ODOT. General terms for monitoring and updates are provided in the following proposed code language.

Please note: the specific Article and Section numbers may be revised prior to adoption in order to account for recent changes to the Subdivision Ordinance.

## **ARTICLE XXIII. INTERCHANGE OVERLAY DISTRICT (IOD)**

*Note: Code numbering and lettering will be modified as needed to be incorporated into the City's existing Zoning Ordinance. City staff anticipates a new Article will be inserted at the end of the Ordinance, beginning at Section 175.*

### **SECTION 175. PURPOSE**

The purpose of the Exit 209 Interchange Overlay District (Exit 209 IOD) is the long-range preservation of operational efficiency and safety of the I-84/US 395 Interchange. "The transportation function of the I-84/US 395 Interchange is principally to provide safe and efficient access to downtown Pendleton and the commercial and residential areas south of I-84, including local traffic traveling between these two areas. In addition to this primary function, the I-84/US 395 Interchange remains an important facility for accessing the Eastern Oregon Correctional Facility, Blue Mountain Community College, the residential areas north of downtown, and the planned relocation of St. Anthony Hospital. The interchange also serves regional traffic coming from/going to US 395 south of Pendleton, and both OR 11 and OR 37 north of downtown."

### **SECTION 176. APPLICABILITY**

The provisions of this Article shall apply to any administrative, quasi-judicial, or legislative land use application for a parcel wholly or partially within the Exit 209 IOD, as defined in this section. These provisions shall apply to all new development and redevelopment applications that meet one or more of the following conditions:

- a) New residential, commercial, public/institutional or industrial development.
- b) Expansion of single-family or duplex residential development valued in excess of thirty (30%) percent of the most recent assessed value of the improvements on the property.
- c) Reconstruction of a single-family or duplex residential casualty loss valued in excess of one hundred thirty (130%) percent of the most recent assessed value of the structure.
- d) Expansion of multiple family, commercial, public/institutional or industrial development valued in excess of fifteen (15%) percent of the most recent assessed value of the improvements on the property.
- e) Reconstruction of multiple family, commercial, public/institutional or industrial casualty loss in excess of one hundred fifteen (115%) percent of the most recent assessed value of the structure.
- f) Change in use (occupancy class) of a building as defined by the Uniform Building Code.

Development values within this section shall be determined by the City Manager based on the Building Valuation Data published and updated periodically by the State of Oregon Building Codes Agency for use in determining building permit valuations and the records of the Umatilla County Assessor's Office.

Any conflict between the standards of the IOD and those contained within other chapters of the Zoning or Subdivision Ordinance shall be resolved in favor of the IOD.

The boundary of the Exit 209 IOD is shown on the Pendleton Comprehensive Land Use Plan Map and Zoning Map.

***For Discussion:*** The IAMP study area (Figure 1), which is also the proposed IOD, extends south to SW 30<sup>th</sup> Street. Given the development potential south of the current study area that would use the interchange, determine whether to extend the IOD boundary to include land along the US 395 corridor south to the city limits. Also, confirm that the definitions of redevelopment in a-f, which are taken from existing City requirements (Ordinance 3481, Construction and Building, Section 4), are appropriate here.

#### **SECTION 177. PERMITTED LAND USES**

Uses permitted outright or conditionally in the underlying zoning district are permitted subject to other applicable provisions in the Zoning and Subdivision Ordinance.

#### **SECTION 178. ACCESS MANAGEMENT**

In addition to the requirements of OAR 734-051, parcels wholly or partially within the Exit 209 IOD are governed by the Access Management Plan in the I-84/US 395 Interchange Area Management Plan (IAMP). The following applies to all land use and development applications for parcels within the IAMP Overlay District as defined in Section 98.

##### **A. Access Approval**

1. Access to local streets within the Exit 209 IOD shall be subject to joint review by the City and the Oregon Department of Transportation (ODOT). Coordination of this review will occur pursuant to Section 102.
2. Approval of an access permit is an administrative action and is based on the standards contained in this Article and the Access Management Plan in the I-84/US 395 IAMP.

***For Discussion:*** Transportation study requirements proposed in Section 102 should be sufficient to demonstrate compliance with the IAMP and its Access Management Plan, and a set of amendments to create local access management standards citywide are not required at this time. It is understood that ODOT access management standards apply to US 395 in the IMSA.

#### **SECTION 179. SUPPLEMENTAL TRANSPORTATION SYSTEM DEVELOPMENT CHARGE**

Development or redevelopment of parcels within the IOD will be assessed a Supplemental Transportation System Development Charge (STSDC) that will be dedicated to transportation improvements in the vicinity of the I-84/US 395 Interchange, as identified in the adopted I-84/US 395 IAMP. The STSDC will be based on weekday p.m. peak hour trips generated by a proposed development and calculated pursuant to TIS requirements in Ordinance 3481 (Building Standards), Section 5 of the City's code, and referred to in Section 102.

***For Discussion:*** A supplemental transportation SDC for the IAMP area needs to be discussed. A separate ordinance or set of ordinance amendments would need to be developed, including definition of the area to which the supplemental SDC would apply, the methodology for calculating the SDC, and the list of projects in the interchange area for which the SDC would be eligible. Peak hour trips in this area are often the result of parents driving kids to Sunridge Middle School, which may result in a peak longer than an hour in both the a.m. and p.m.

## **SECTION 180. ADMINISTRATION**

This section establishes the responsibilities of the City and ODOT to monitor and evaluate vehicle trip generation and impacts on the I-84/US 395 Interchange from development approval under this section.

### **A. Transportation Assessment Report**

For all development applications subject to Section 98 of this Article and located within the Exit 209 IOD, the applicant shall prepare and submit to the City a Transportation Assessment Report that documents the following:

1. Expected weekday p.m. peak hour trip generation.
2. Identifies how the development complies with the IAMP and what off-site improvements will be constructed as part of the development.
3. Reviews proposed site-access driveways and streets to ensure compliance with the IAMP Access Management Plan/Strategy and that adequate intersection sight distance and traffic control will be provided.
4. Reviews on-site parking and circulation plan to ensure safe and efficient travel for all modes of travel and includes AutoTurn analyses for anticipated trucks and emergency service vehicles.

### **B. Transportation Impact Study**

1. A Transportation Impact Study (TIS) shall be required for all zone change and comprehensive plan amendments that result in an increase in trips as compared to uses permitted under the existing designation and for all development applications for parcels partially or wholly within the Exit 209 IOD.
2. The TIS shall be developed according to the requirements of Section 5 (Development Requirements) of Ordinance 3481 (Construction and Building), shall document all elements required as part of the Transportation Assessment Report, Section 102(A) of this Article, and shall demonstrate the level of impact of the proposed development on the surrounding street system and the I-84/US 395 Interchange.
3. The scope of the TIS and determination of impact or effect shall be coordinated with the City of Pendleton and ODOT.

***For Discussion:** For simplicity, existing TIS requirements are referred to in the proposed language above rather than being written out in full. The only additional specification being proposed here is requiring a TIS for zone changes and plan amendments, a level of analysis that is already necessary to comply with the TPR. The City may want to reconsider whether TIS requirements can be waived by the Public Works Director in the Exit 209 IOD, as is currently permitted in Ordinance 3481, Section 5, Subsection B(1).*

### **C. Agency Coordination**

1. The City shall not deem the land use application complete unless the application includes a Traffic Assessment Report or, if required, a TIS prepared in accordance with the

requirements of Section 5 (Development Requirements) of Ordinance 3481 (Building Standards).

2. The City shall provide written notification to ODOT once the application is deemed complete. This notice shall include an invitation to ODOT to participate in the City's site review meeting(s), pursuant to City pre-application requirements.
3. ODOT shall have at least 10 days, measured from the date the notice to agencies was mailed, to provide written comments to the City. If ODOT does not provide written comments during this 10-day period, the City staff report will be issued without consideration of ODOT comments.

***For Discussion:** For consistency and ease of administration, the time period suggested in C.3 above is consistent with the City's current notification and review process.*

#### D. Monitoring Responsibilities

The details of City monitoring responsibilities will be established in the I-84/US 395 Interchange Area Supplemental Transportation SDC (STSDC) Ordinance and the approved I-84/US 395 IAMP City of Pendleton/Oregon Department of Transportation Intergovernmental Agreement (IGA).

1. The City will develop an Annual IAMP Report that details program management issues and recommends index adjustments to the STSDC rates for the coming year. The City will provide the Annual IAMP Report to ODOT to allow for coordination of management issues, such as updating the monitoring process and the timing for the next IAMP update.
2. The agencies will review the IAMP pursuant to the review triggers. This review shall be conducted through a meeting initiated by the City of Pendleton or ODOT and shall include all affected agencies.
3. IAMP review triggers may be based on criteria such as set time periods, queuing thresholds, and alternative mobility standards. They shall be specified in the implementation section of the IAMP and in the City/ODOT IGA.

#### IAMP Review Triggers

- a. Periodically, the implementation program shall be evaluated to ensure it is accomplishing the goals and objectives of the IAMP.
- b. Events that will trigger an IAMP review include:
  - 1) Every *fifth* year from the date of IAMP adoption or latest update.
  - 2) Plan map and zone changes that have a "significant effect" per the Transportation Planning Rule and impact the I-84/US 395 Interchange, or that are located within the IOD.
  - 3) The 95th-percentile northbound left-turn queue at the existing SW Emigrant Avenue/SW 20th Street intersection backs past the I-84/US 395 Westbound ramp terminal.

- 4) The 95th-percentile southbound left-turn queue at the US 395/SW Hailey Avenue-SW Tutuilla Creek Road intersection spills into the US 395 through lanes and backs up into the I-84/US 395 Eastbound ramp terminal.
- 5) Mobility measures at the I-84 ramp terminals exceed the adopted alternative mobility standard of a volume-to-capacity ratio of 0.86 along US 395 from the I-84 Westbound ramp terminal to the realigned SW Hailey Avenue intersection.

***For Discussion:** Review triggers may be codified (as proposed above), could be adopted at the policy level through the IAMP document itself, and/or could be enacted through the provisions of an intergovernmental agreement (IGA) between the City and ODOT.*

4. In addition to the established triggers for IAMP review, the agencies can request a review of the IAMP at any time if, in their determination, specific land use or transportation changes warrant a review of the underlying assumptions and/or recommendations within the IAMP.
5. If the participants in the IAMP review meeting agree that an IAMP amendment is not warranted after examining the impacts of the conditions that triggered the review, a recommendation of "no action" may be documented and submitted in the form of a letter to the City of Pendleton City Council and the Oregon Transportation Commission (OTC).
6. If the need for an update to the plan is found during IAMP review, review participants will initiate an IAMP update process. Initial steps in updating the IAMP will include scoping the planning process, identifying funding, and outlining a schedule for plan completion. Once completed, IAMP updates shall be required to be legislatively adopted as amendments to the City of Pendleton TSP and Comprehensive Plan and as an update to the OHP, requiring a City Council public hearing and an OTC hearing.

## **SECTION 181. COMPREHENSIVE PLAN AND ZONING MAP AND TEXT AMENDMENTS**

This section applies to all Comprehensive Plan Map and Zoning Map amendments for parcels wholly or partially within the IOD and code amendments that affect development within the IOD.

- A. **Transportation Planning Rule Requirements.** Applications for Comprehensive Plan amendments, Zoning Map amendments, or development regulation amendments shall determine whether the proposed change will significantly affect a collector or arterial transportation facility and must meet the requirements of Oregon Administrative Rule (OAR) 660-012-0060.

***For Discussion:** While it is implicit that local Comprehensive Plan and code amendments will be required to comply with state land use and transportation planning regulations, it is recommended to make this explicit in the City's code, particularly in the interchange overlay district. The City's existing code regarding amendments (Article XII) does not currently make explicit reference to the TPR.*

**KITTELSON & ASSOCIATES, INC.**  
TRANSPORTATION ENGINEERING / PLANNING

**CITY OF PENDLETON PLANNING COMMISSION**

**Staff report and recommendation**

**FILE NO.:** AMD10-03 (Legislative Amendment to the Comprehensive Plan)

**PREPARED:** October 14, 2010

**HEARING DATE:** October 21, 2010

**APPLICANT(S):** Evan MacKenzie, Planner  
Representing the City of Pendleton  
500 SW Dorion Avenue  
Pendleton, OR 97801

Matt Hughart  
Kittelson & Associates, Inc.  
610 SW Alder Street, Suite 700  
Portland, OR 97205

**OWNER(S):** City of Pendleton

**SITE LOCATION:** Interstate 84/US395 Interchange, and lands within roughly ½ mile.

**PROPOSAL:** Adoption of an Interchange Area Master Plan (IAMP) for the I-84/US395 Interchange.

**REVIEWED BY:** Evan MacKenzie, City Planner

**ATTACHMENTS:** Application and supplemental materials  
Public Notice and map of noticed area  
I-84/US395 Interchange Area Master Plan

**TESTIMONY:** No written testimony received at the time this report was prepared.

**SUMMARY:** Adoption of an Interchange Area Master Plan (IAMP) for the I-84/US395 Interchange, which also includes an amendment to the City of Pendleton Comprehensive Plan Goal 12 (Transportation) element.

**APPLICABLE CRITERIA AND STANDARDS:**

The criteria for approval of a text or map amendment to the Zoning Ordinance or Comprehensive Plan are contained in Article XXI (Sections 147-150) of the Zoning Ordinance. State of Oregon Goal 12 (The Transportation Planning Rule, or TPR) is found in Oregon Administrative Rules (OAR) 660-015-0000(12).

The proposed development must comply with applicable provisions contained in Chapter 10 of the General Ordinances of the City of Pendleton, and the City of Pendleton Comprehensive Plan. Generally, unless otherwise noted, if a request is found to be consistent with the General Ordinances, it is considered consistent with the Comprehensive Plan. Amendments to the Plan, unless appealed, become consistent upon adoption.

The action contemplated is a legislative matter. Action on this request requires a hearing by both the Planning Commission (in the form of a recommendation to Council) and City Council (adoption by ordinance). The action is not subject to the "120 Day Rule" established in ORS 227.178.

**(ZONING ORDINANCE) SECTION 2. PURPOSE:** The text of this Ordinance and zoning map constitute the zoning ordinance and regulations for the area within the Urban Growth Boundary of the City of Pendleton and are adopted to protect and promote the public health, safety and welfare, and to provide the economic and social advantages which result from the orderly and planned use of land resources.

## **1. STATE OF OREGON GOAL 12: TRANSPORTATION PLANNING RULE**

### **OAR 660-015-0000(12)**

To provide and encourage a safe, convenient and economic transportation system.

Transportation planning in Oregon is guided by Statewide Planning Goal 12 and the Transportation Planning Rule (TPR, OAR 660-012). The Pendleton Transportation System Plan (TSP) was adopted in 2007 to meet the requirements of the TPR. Any proposed rezone may change the underlying assumptions of the TSP, and requires analysis, findings and conclusions to determine consistency with the function, capacity and performance standards of the TSP.

This process is specifically addressed in Section 0060, and requires a two-part analysis. Findings shall address whether or not the proposed amendment would “significantly affect” the transportation system as defined in subsections (1) and (4). If the amendment would result in a significant effect, then approval shall be conditioned upon mitigation measures as described in subsections (2) and (3).

Requirements of the TPR generally dictate the applicant submit a Traffic Impact Analysis (TIA) from a Registered Traffic Engineer documenting differential in potential trip generation between the existing and proposed zones. If the proposed zone has the potential for increased trip generation over the existing zone, the analysis shall calculate any projected change in the Level of Service (LOS) for affected intersections. Any analysis shall be coordinated with ODOT to ensure the methods used meet accepted standards. Analysis shall also account for additional public facilities such as sidewalks, bicycle lanes or other non-motorized facilities not accounted for in the TSP.

Alternately, the applicant or the City may rely on trip generation figures from the Institute of Transportation Engineers (ITE). If the City is to allow consideration based on generalities, a “worst case scenario” should be assumed, much as it would be under a TIA.

### **OAR 660-012-0060 - Plan and Land Use Regulation Amendments**

- (1) Where an amendment to a functional plan, an acknowledged comprehensive plan, or a land use regulation would significantly affect an existing or planned transportation facility, the local government shall put in place measures as provided in section (2) of this rule to assure that allowed land uses are consistent with the identified function, capacity, and performance standards (e.g. level of service, volume to capacity ratio, etc.) of the facility. A plan or land use regulation amendment significantly affects a transportation facility if it would:
  - (a) Change the functional classification of an existing or planned transportation facility (exclusive of correction of map errors in an adopted plan);
  - (b) Change standards implementing a functional classification system; or
  - (c) As measured at the end of the planning period identified in the adopted transportation system plan:
    - (A) Allow land uses or levels of development that would result in types or levels of travel or access that are inconsistent with the functional classification of an existing or planned transportation facility;
    - (B) Reduce the performance of an existing or planned transportation facility below the minimum acceptable performance standard identified in the TSP or comprehensive plan; or
    - (C) Worsen the performance of an existing or planned transportation facility that is otherwise projected to perform below the minimum acceptable performance standard identified in the TSP or comprehensive plan.

**Findings:** The City of Pendleton Transportation System Plan (TSP) was adopted in 2007. The TSP constitutes the Goal 12 element of the Comprehensive Plan. Interstate 84 and US395/Southgate are both ODOT facilities, Southgate is classified as an Arterial in the TSP. SW Emigrant and Frazer are also ODOT facilities, and are classified as Arterials in the TSP. All remaining streets within the vicinity of the interchange are under the jurisdiction of the City of Pendleton.

Adoption of the IAMP will not change the type and intensity of uses permitted outright, permitted conditionally, or prohibited within the respective zones. Adoption of the IAMP will result in no change to

(potential) trip generation. Because no new or additional uses are contemplated, a detailed analysis of trip generation under the existing zones and the proposed IAMP overlay is not warranted.

No development is proposed, or would be permitted through adoption of the IAMP, that would result in types or levels of travel or access that are inconsistent with the functional classification of an existing or planned transportation facility. Adoption of the IAMP would not worsen the performance of an existing or planned transportation facility that is otherwise projected to perform below the minimum acceptable performance standard identified in the TSP or Comprehensive Plan.

The proposed IAMP will serve to assist both the City and ODOT in accommodating traffic growth in the entire Pendleton area, so that future amendments to the TSP may not be necessary, or may be delayed.

**Conclusion:** Approval of the request would have no immediate or long-term (trip generation) impact on existing transportation facilities. Approval of the request would not significantly affect an existing or planned transportation facility due to increased trip generation. **No requirement exists to comply with the standards contained in Section (2) below.**

- (2) Where a local government determines that there would be a significant effect, compliance with section (1) shall be accomplished through one or a combination of the following:
  - (a) Adopting measures that demonstrate allowed land uses are consistent with the planned function, capacity, and performance standards of the transportation facility.
  - (b) Amending the TSP or comprehensive plan to provide transportation facilities, improvements or services adequate to support the proposed land uses consistent with the requirements of this division; such amendments shall include a funding plan or mechanism consistent with section (4) or include an amendment to the transportation finance plan so that the facility, improvement, or service will be provided by the end of the planning period.
  - (c) Altering land use designations, densities, or design requirements to reduce demand for automobile travel and meet travel needs through other modes.
  - (d) Amending the TSP to modify the planned function, capacity or performance standards of the transportation facility.
  - (e) Providing other measures as a condition of development or through a development agreement or similar funding method, including transportation system management measures, demand management or minor transportation improvements. Local governments shall as part of the amendment specify when measures or improvements provided pursuant to this subsection will be provided.

**Findings:** Findings and conclusions from previous sections are included herein by reference. Approval of the request would not significantly affect an existing or planned transportation facility; no action pursuant to Section 2 is required.

The purpose of the IAMP is to anticipate traffic growth, and plan for it before it happens. If the IAMP is not adopted, it is possible that the City would have to consider a development moratorium along Tutuilla Road, and perhaps on the entire south side of the City in the not-too-distant future.

**Conclusion: Criterion is not applicable.**

- (3) Notwithstanding sections (1) and (2) of this rule, a local government may approve an amendment that would significantly affect an existing transportation facility without assuring that the allowed land uses are consistent with the function, capacity and performance standards of the facility where:
  - (a) The facility is already performing below the minimum acceptable performance standard identified in the TSP or comprehensive plan on the date the amendment application is submitted;
  - (b) In the absence of the amendment, planned transportation facilities, improvements and services as set forth in section (4) of this rule would not be adequate to achieve consistency with the identified function, capacity or performance standard for that facility by the end of the planning period identified in the adopted TSP;

- (c) Development resulting from the amendment will, at a minimum, mitigate the impacts of the amendment in a manner that avoids further degradation to the performance of the facility by the time of the development through one or a combination of transportation improvements or measures;
- (d) The amendment does not involve property located in an interchange area as defined in paragraph (4)(d)(C); and
- (e) For affected state highways, ODOT provides a written statement that the proposed funding and timing for the identified mitigation improvements or measures are, at a minimum, sufficient to avoid further degradation to the performance of the affected state highway. However, if a local government provides the appropriate ODOT regional office with written notice of a proposed amendment in a manner that provides ODOT reasonable opportunity to submit a written statement into the record of the local government proceeding, and ODOT does not provide a written statement, then the local government may proceed with applying subsections (a) through (d) of this section.

**Findings:** Findings and conclusions from previous sections are included herein by reference. Approval of the request would not significantly affect an existing or planned transportation facility; no action pursuant to Section 3 is required.

**Conclusion: Criterion is not applicable.**

- (4) Determinations under sections (1)-(3) of this rule shall be coordinated with affected transportation facility and service providers and other affected local governments.
  - (a) In determining whether an amendment has a significant effect on an existing or planned transportation facility under subsection (1)(c) of this rule, local governments shall rely on existing transportation facilities and services and on the planned transportation facilities, improvements and services set forth in subsections (b) and (c) below.
  - (b) Outside of interstate interchange areas, the following are considered planned facilities, improvements and services:
    - (A) Transportation facilities, improvements or services that are funded for construction or implementation in the Statewide Transportation Improvement Program or a locally or regionally adopted transportation improvement program or capital improvement plan or program of transportation service provider.
    - (B) Transportation facilities, improvements or services that are authorized in a local transportation system plan and for which a funding plan or mechanism is in place or approved. These include, but are not limited to, transportation facilities, improvements or services for which: transportation systems development charge revenues are being collected; a local improvement district or reimbursement district has been established or will be established prior to development; a development agreement has been adopted; or conditions of approval to fund the improvement have been adopted.
    - (C) Transportation facilities, improvements or services in a metropolitan planning organization (MPO) area that are part of the area's federally approved, financially constrained regional transportation system plan.
    - (D) Improvements to state highways that are included as planned improvements in a regional or local transportation system plan or comprehensive plan when ODOT provides a written statement that the improvements are reasonably likely to be provided by the end of the planning period.
    - (E) Improvements to regional and local roads, streets or other transportation facilities or services that are included as planned improvements in a regional or local transportation system plan or comprehensive plan when the local government(s) or transportation service provider(s) responsible for the facility, improvement or service provides a written statement that the facility, improvement or service is reasonably likely to be provided by the end of the planning period.
  - (c) Within interstate interchange areas, the improvements included in (b)(A)-(C) are considered planned facilities, improvements and services, except where:
    - (A) ODOT provides a written statement that the proposed funding and timing of mitigation measures are sufficient to avoid a significant adverse impact on the Interstate Highway system, then local governments may also rely on the improvements identified in paragraphs (b)(D) and (E) of this section; or

- (B) There is an adopted interchange area management plan, then local governments may also rely on the improvements identified in that plan and which are also identified in paragraphs (b)(D) and (E) of this section.
- (d) As used in this section and section (3):
- (A) Planned interchange means new interchanges and relocation of existing interchanges that are authorized in an adopted transportation system plan or comprehensive plan;
  - (B) Interstate highway means Interstates 5, 82, 84, 105, 205 and 405; and
  - (C) Interstate interchange area means:
    - (i) Property within one-half mile of an existing or planned interchange on an Interstate Highway as measured from the center point of the interchange; or
    - (ii) The interchange area as defined in the Interchange Area Management Plan adopted as an amendment to the Oregon Highway Plan.
- (e) For purposes of this section, a written statement provided pursuant to paragraphs (b)(D), (b)(E) or (c)(A) provided by ODOT, a local government or transportation facility provider, as appropriate, shall be conclusive in determining whether a transportation facility, improvement or service is a planned transportation facility, improvement or service. In the absence of a written statement, a local government can only rely upon planned transportation facilities, improvements and services identified in paragraphs (b)(A)-(C) to determine whether there is a significant effect that requires application of the remedies in section (2).

**Findings:** Findings and conclusions from previous sections are included herein by reference. All streets within the vicinity of the Exit 209 interchange are either City of Pendleton or ODOT facilities; no Umatilla County facilities are impacted by the proposal. All existing facilities are shown on the City of Pendleton Transportation System Plan map, and are also recognized on the ODOT Oregon Transportation Map (Pendleton). There is one planned facility within the immediate vicinity (SW 19<sup>th</sup> Street extending south from Tutuilla Road). Outside of the recommendations contained in the IAMP, there have been no discussions regarding changes to existing facilities. No new facilities outside those in existing plans are necessary or under consideration, but the redesign, widening, or realignment of several existing facilities is contemplated.

There is currently no IAMP in place for Exit 209. Adoption of this IAMP will establish a new set of priorities and projects within the vicinity, for both the City of Pendleton and ODOT. The redesign, widening, or realignment of several facilities is contemplated on ODOT facilities (US395 and SW Emigrant/Frazer) as well as several City facilities (SW Hailey/Tutuilla Road, SW 20<sup>th</sup> Street, and SW Court Avenue). Some of the changes will require purchase/condemnation of private property. None of these changes are anticipated under the existing TSP.

**Conclusion:** All facilities impacted by the proposal are pre-existing facilities documented in the City of Pendleton TSP and/or ODOT plans. Some changes are proposed to existing facilities, including widening and/or realignment, but no new facilities are proposed where none exist today. **Criterion is met.**

- (5) The presence of a transportation facility or improvement shall not be a basis for an exception to allow residential, commercial, institutional or industrial development on rural lands under this division or OAR 660-004-0022 and 660-004-0028.

**Findings:** The subject property is within the City of Pendleton Urban Growth Boundary. No residential, commercial, institutional or industrial development is proposed. No exception to a State Goal is proposed, and none is required in order to consider approval of the request. This criterion is not applicable.

**Conclusion: Criterion is not applicable.**

- (6) In determining whether proposed land uses would affect or be consistent with planned transportation facilities as provided in 0060(1) and (2), local governments shall give full credit for potential reduction in vehicle trips for uses located in mixed-use, pedestrian-friendly centers, and neighborhoods as provided in (a)-(d) below;
- (a) Absent adopted local standards or detailed information about the vehicle trip reduction benefits of mixed-use, pedestrian-friendly development, local governments shall assume that uses located within a

mixed-use, pedestrian-friendly center, or neighborhood, will generate 10% fewer daily and peak hour trips than are specified in available published estimates, such as those provided by the Institute of Transportation Engineers (ITE) Trip Generation Manual that do not specifically account for the effects of mixed-use, pedestrian-friendly development. The 10% reduction allowed for by this section shall be available only if uses which rely solely on auto trips, such as gas stations, car washes, storage facilities, and motels are prohibited;

- (b) Local governments shall use detailed or local information about the trip reduction benefits of mixed-use, pedestrian-friendly development where such information is available and presented to the local government. Local governments may, based on such information, allow reductions greater than the 10% reduction required in (a);
- (c) Where a local government assumes or estimates lower vehicle trip generation as provided in (a) or (b) above, it shall assure through conditions of approval, site plans, or approval standards that subsequent development approvals support the development of a mixed-use, pedestrian-friendly center or neighborhood and provide for on-site bike and pedestrian connectivity and access to transit as provided for in 0045(3) and (4). The provision of on-site bike and pedestrian connectivity and access to transit may be accomplished through application of acknowledged ordinance provisions which comply with 0045(3) and (4) or through conditions of approval or findings adopted with the plan amendment that assure compliance with these rule requirements at the time of development approval; and
- (d) The purpose of this section is to provide an incentive for the designation and implementation of pedestrian-friendly, mixed-use centers and neighborhoods by lowering the regulatory barriers to plan amendments, which accomplish this type of development. The actual trip reduction benefits of mixed-use, pedestrian-friendly development will vary from case to case and may be somewhat higher or lower than presumed pursuant to (a) above. The Commission concludes that this assumption is warranted given general information about the expected effects of mixed-use, pedestrian-friendly development and its intent to encourage changes to plans and development patterns. Nothing in this section is intended to affect the application of provisions in local plans or ordinances, which provide for the calculation or assessment of systems development charges or in preparing conformity determinations required under the federal Clean Air Act.

**Findings:** Findings and conclusions from previous sections are included herein by reference. No changes are proposed that would increase the number or type of allowable uses, which could increase trip generation over full build-out under the existing zoning. No development is proposed as part of this request, and no additional would be permitted upon approval of this request.

**Conclusion: Criterion is not applicable.**

- (7) Amendments to acknowledged comprehensive plans and land use regulations which meet all of the criteria listed in (a)-(c) below shall include an amendment to the comprehensive plan, transportation system plan the adoption of a local street plan, access management plan, future street plan or other binding local transportation plan to provide for on-site alignment of streets or accessways with existing and planned arterial, collector, and local streets surrounding the site as necessary to implement the requirements in Section 0020(2)(b) and Section 0045(3) of this division:
  - (a) The plan or land use regulation amendment results in designation of two or more acres of land for commercial use;
  - (b) The local government has not adopted a TSP or local street plan which complies with Section 0020(2)(b) or, in the Portland Metropolitan Area, has not complied with Metro's requirement for street connectivity as contained in Title 6, Section 3 of the Urban Growth Management Functional Plan; and
  - (c) The proposed amendment would significantly affect a transportation facility as provided in 0060(1).

**Findings:** The proposal itself is an amendment to the Transportation System Plan, which is a component of the City of Pendleton Comprehensive Plan. The proposal will not result in a change in designation (zoning) on any property, nor will it result in a change in trip generation. As noted previously, the proposed IAMP will serve to assist both the City and ODOT in accommodating traffic growth in the entire Pendleton area.

**Conclusion:** No additional amendment is necessary pursuant to this section. **Criterion is not applicable.**

- (8) A "mixed-use, pedestrian-friendly center or neighborhood" for the purposes of this rule, means:
- (a) Any one of the following:
    - (A) An existing central business district or downtown;
    - (B) An area designated as a central city, regional center, town center or main street in the Portland Metro 2040 Regional Growth Concept;
    - (C) An area designated in an acknowledged comprehensive plan as a transit oriented development or a pedestrian district; or
    - (D) An area designated as a special transportation area as provided for in the Oregon Highway Plan.
  - (b) An area other than those listed in (a) which includes or is planned to include the following characteristics:
    - (A) A concentration of a variety of land uses in a well-defined area, including the following:
      - (i) Medium to high-density residential development (12 or more units per acre);
      - (ii) Offices or office buildings;
      - (iii) Retail stores and services;
      - (iv) Restaurants; and
      - (v) Public open space or private open space which is available for public use, such as a park or plaza.
    - (B) Generally include civic or cultural uses;
    - (C) A core commercial area where multi-story buildings are permitted;
    - (D) Buildings and building entrances oriented to streets;
    - (E) Street connections and crossings that make the center safe and conveniently accessible from adjacent areas;
    - (F) A network of streets and, where appropriate, accessways and major driveways that make it attractive and highly convenient for people to walk between uses within the center or neighborhood, including streets and major driveways within the center with wide sidewalks and other features, including pedestrian-oriented street crossings, street trees, pedestrian-scale lighting and on-street parking;
    - (G) One or more transit stops (in urban areas with fixed route transit service); and
    - (H) Limit or do not allow low-intensity or land extensive uses, such as most industrial uses, automobile sales and services, and drive-through services.

**Findings:** No new mixed-use areas are proposed. This criterion is not applicable.

**Conclusion: Criterion is not applicable.**

**Summary conclusions, Goal 12:** Approval of the request does not have the potential to result in trip generation that will exceed existing growth assumptions; rather, the intent of the IAMP is to accommodate projected growth. One of the intents of the IAMP is to plan for upgrades to existing facilities or new (unplanned) facilities which are necessary in order to accommodate anticipated growth. No conditions of approval are necessary in order to insure compliance with the TPR or the City of Pendleton TSP. **The IAMP itself constitutes an amendment to the City of Pendleton Comprehensive Plan Goal 12 element.**

## **7. ZONING ORDINANCE ARTICLE XXI. AMENDMENTS**

**SECTION 147. AUTHORIZATION TO INITIATE AMENDMENTS.** An amendment to the text of this Ordinance or to a zoning map may be initiated by the City Council, the Planning Commission or by application of the property owner for an amendment by filing an application with the City Manager using forms prescribed pursuant to Section 157 of this Ordinance.

**SECTION 148. COMPLIANCE WITH COMPREHENSIVE PLAN.** An amendment to the text of this Ordinance or to a zoning map shall comply with the provisions of the City of Pendleton Comprehensive Plan text and Comprehensive Land Use Map. Any deviation from this section shall be preceded by an amendment to the Comprehensive Plan Text or to the Comprehensive Land Use Map.

**SECTION 149. PUBLIC HEARING ON AMENDMENTS.** The Planning Commission shall conduct a public hearing on the proposed amendment according to the procedures of Section 161 of this Ordinance at its earliest practicable meeting after it is proposed and shall, within forty (40) days after the hearing, recommend to the City Council approval, disapproval or modification of the proposed amendment. After receiving the recommendation of the Planning Commission, the City Council shall hold a public hearing on the proposed amendment and render a final decision within one hundred twenty (120) days after application submittal unless longer review is agreed upon by the City and applicant. Public hearings on amendments encompassing lands of a mobile home park shall be conducted after notification of park tenants at least twenty (20) but no more than forty (40) days prior to the hearing. (Section 149, as amended by Ordinance No. 3428, passed May 2, 1989.)

**SECTION 150A. ZONING MAP.** An amendment to the text of this Ordinance or to a zoning map shall comply with the provisions of the City of Pendleton Transportation System Plan. More intense development may be permitted where amendments to this Ordinance include amendments to the performance standards for the facility to allow such intense development. No amendments may allow land uses or levels that are inconsistent with the functional classification of an existing or planned transportation facility. (Section 150A, as added by Ordinance No. 3745, passed June 19, 2007.)

**SECTION 150. RECORD OF AMENDMENTS.** The City Recorder shall maintain records of amendments to the text and zoning map of this Ordinance in a form convenient for use by the public.

**Findings:** The application was submitted by City staff on behalf of the City and the consultant team hired by ODOT. The City of Pendleton Comprehensive Plan includes a Goal 12 (Transportation) element, known as the Transportation System Plan. The proposal constitutes an amendment to the TSP, which in turn constitutes an amendment to the Comprehensive Plan. The Transportation Vision, contained on pages 6 and 7 of the TSP, identifies the following priorities:

- Better bike and pedestrian access
- Establish a fixed-route bus service
- Improve the aesthetic appearance of the street
- Enhance the street environment, particularly for pedestrians
- Provide other routes for local traffic
- Encourage drivers to drive at safe speeds
- Increase the economic vitality of the community
- Minimize conflicts between highway users: pedestrians, bicyclists, transit, freight carriers and motorists

Although a lot of time during advisory committee meetings and open houses was dedicated to the very legitimate concerns expressed by local merchants regarding impacts to their properties, very little time was spent on the potential results of inaction. The City and ODOT are aware that the intersections at and near both sides of the interchange are approaching failure, especially during “school peak” hours. Certain movements tend to queue back into other intersections, which in turn causes those intersections to fail or approach failure. All projections assume an increase in traffic over time; if the City and ODOT do not work to either reduce traffic volume or mitigate the results of increased traffic, not only will existing development become less attractive but the City may have to consider a moratorium on new development on the entire south side of the City. Neither of these options serves to increase the economic vitality of Pendleton. The whole reason the Comprehensive Plan and its implementing ordinances exist is in order to avoid such a situation through either deliberate action or inaction.

The proposed action was noticed to property owners within 250 feet of the directly impacted area on September 28, 2010, and noticed in the *East Oregonian* on or before Saturday, October 16 as an agenda item for the October 21, 2010 Planning Commission meeting. As a legislative matter, the Planning Commission shall make a recommendation to the City Council, who must adopt the IAMP by ordinance.

**CONCLUSION:** Staff considers the criterion met but defers to the Planning Commission for their judgment on the matter. The Commission must make a finding that this criterion has been satisfied (or not) in order to forward a recommendation to the City Council.

## 7. SUMMARY FINDINGS:

- A. The City of Pendleton Comprehensive Plan was adopted in 1983 and updated in 1990.
- B. The Transportation System Plan (TSP) was adopted in 2007 and constitutes the Goal 12 (Transportation) element of the Comprehensive Plan.
- C. Adoption of the Exit 209 IAMP does not have the potential to result in trip generation that will exceed existing growth assumptions.
- D. Adoption of the IAMP will result in (potential) trip generation that is either unchanged or reduced relative to what might be contemplated under the base zones.
- E. No significant impact to any existing or proposed transportation facility is anticipated; no new residential/commercial/industrial development could occur as a result of approval that would necessitate upgrades to existing facilities or new unplanned facilities.
- F. The proposal has the potential to reduce principle reliance on the automobile by improving facilities and connections for people who may use other modes such as walking and bicycling.
- G. No specific conditions of approval are necessary in order to insure compliance with the TPR or the City of Pendleton TSP.
- H. The Plan is an amendment to the City of Pendleton Comprehensive Plan Goal 12 element; no further amendments are proposed or warranted.
- I. The proposal is consistent with the standards and criteria for an amendment to the Comprehensive Plan, because it implements the Goals and Policies outlined in the Transportation System Plan. As a legislative amendment to the Comprehensive Plan, any ordinance adopted by the City Council and not appealed shall by its very nature be consistent with the Plan.
- J. The proposal is consistent with the standards and criteria for an amendment to the Zoning Ordinance, because it complies with the provisions of the City of Pendleton Transportation System Plan. Adoption of the IAMP will not permit new land uses or levels that are inconsistent with the functional classification of an existing or planned transportation facility.

## 8. SUMMARY CONCLUSIONS:

- A. The request complies with Goal 12 (Transportation Planning Rule)
- B. The request generally complies with criteria for a legislative amendment to the Comprehensive Plan map and/or text.
- C. The request generally complies with criteria for a legislative amendment to the Zoning Ordinance Map and/or text.
- D. Specific conditions are not necessary to ensure that approval of this request will protect the best interests of the property owner(s), surrounding property or neighborhood, and/or the City as a whole.

A request for a map or text amendment may not be approved unless all applicable decision criteria and standards are found met. In this case, staff was able to make findings and conclusions that all criteria are met. Pursuant to testimony presented and/or deliberations conducted at the hearing the Commission may make its own findings and conclusions regarding the approval criteria or conditions of approval.

## 9. SUGGESTED MOTIONS

**For approval** (staff recommends approval of both motions):

- 1. I move that the Commission adopt the findings and conclusions prepared by staff, as set forth in action AMD10-03 above (*or as amended by the Commission, if applicable*).
- 2. I move that the request for an amendment to Ordinances No. 3442 and 3250 (the Comprehensive Plan, Comprehensive Plan Map, the Zoning Ordinance, and Zoning Map) through adoption of the "I84/US 395 Exit 209 Interchange Area Master Plan," a mixed-use, form-based code overlay covering approximately 9.97 acres in the C-1 Central Commercial zone, as set forth in action **AMD10-03** be **recommended for APPROVAL to the City Council**, based on the information, findings and conclusions set forth above.

**For denial:**

1. I move that the Commission adopt the findings and conclusions made by the Commission at this hearing, specifically showing that the proposal set forth in action **AMD10-03 DOES NOT meet the applicable approval criteria** (*must note criteria cited*).
2. I move that the request for an amendment to Ordinances No. 3442 and 3250 (the Comprehensive Plan, Comprehensive Plan Map, the Zoning Ordinance, and Zoning Map) through adoption of the "I84/US 395 Exit 209 Interchange Area Master Plan," a mixed-use, form-based code overlay covering approximately 9.97 acres in the C-1 Central Commercial zone, as set forth in action **AMD10-03 be recommended for DENIAL to the City Council**, based on the information, findings and conclusions set forth above.

**10. RECOMMENDED CONDITIONS OF APPROVAL**

Staff has not recommended any specific conditions be attached to an approval, if granted.

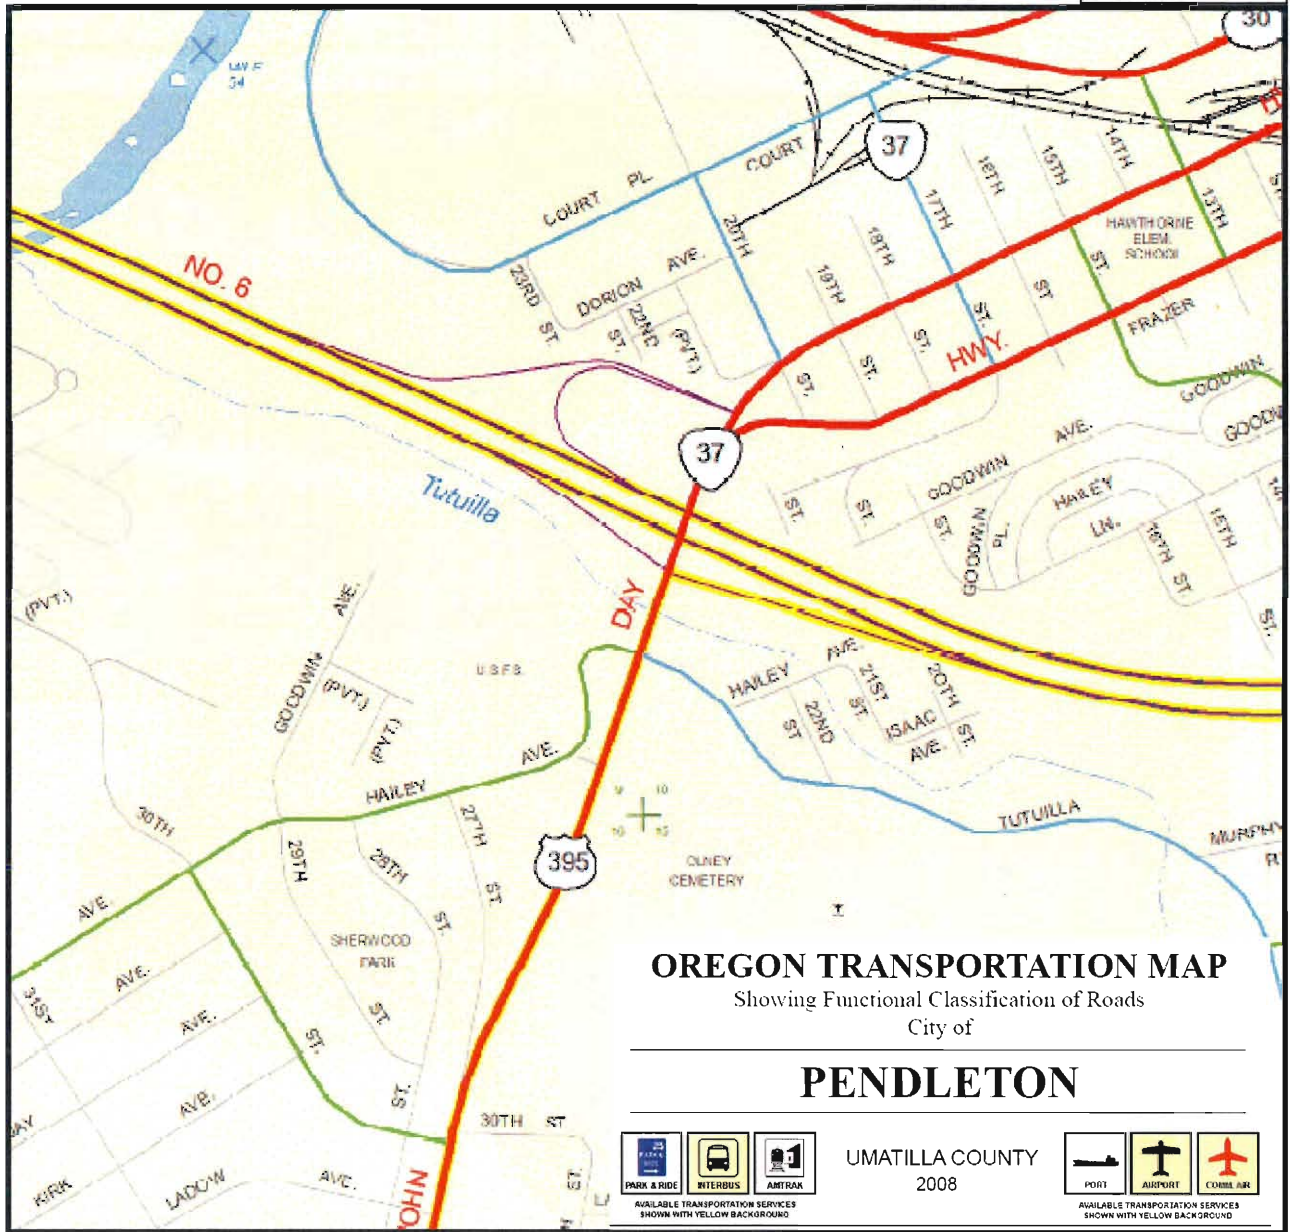

The applicant has the burden of proof regarding all requests affecting this subject property, and they recognize that it is the sole obligation of the applicant to substantiate this request. If any administrative review, suit or action is instituted in connection with any appeal of this decision, the applicant shall be required to: (1) reimburse the city of all costs incurred in defending this action, including, but not limited to, attorneys fees, staff costs, and materials and other related cost; (2) notify the city that the applicant does not desire to undertake such costs and will drop the request; or (3) defend the city's actions on behalf of the city.

The applicant shall notify the City Manager within five days from the city's receipt of any notice of appeal by delivering a written statement to the City Manager advising the City Manager whether the applicant will reimburse the City for all costs as described above; desires to drop the request; or intends to defend the City's actions on behalf of the City.

In the absence of written communication from the applicant within the allotted five days, the City may, at its option, presume the applicant desires to drop the request and the City shall have no obligation to defend the appeal.

In appeals involving questions of City wide significance, the City may participate in the proceedings described herein at its own expense. Nothing in this condition affects the applicant's right to retain independent counsel in making its own legal appearance on appeal.

If any proceeding, including recession, is instituted by the applicant, in which the City is a party, in connection with any controversy arising out of this request, the applicant will indemnify and hold the City harmless from any costs of the action, including a reasonable amount to be fixed by the court as attorney fees in such suit or action, both at trial and on appeal.

**CITY OF PENDLETON PLANNING COMMISSION**

**Staff report, supplemental**

**FILE NO.:** AMD10-03 (Legislative Amendment to the Comprehensive Plan)

**PREPARED:** October 28, 2010

**HEARING DATE:** November 4, 2010

**APPLICANT(S):** *Evan MacKenzie, Planner  
Representing the City of Pendleton  
500 SW Dorion Avenue  
Pendleton, OR 97801*

*Matt Hughart  
Kittelson & Associates, Inc.  
610 SW Alder Street, Suite 700  
Portland, OR 97205*

**OWNER(S):** *City of Pendleton*

**SITE LOCATION:** *Interstate 84/US395 Interchange, and lands within roughly ½ mile.*

**PROPOSAL:** *Adoption of an Interchange Area Master Plan (IAMP) for the I-84/US395 Interchange.*

**REVIEWED BY:** *Evan MacKenzie, City Planner*

**ATTACHMENTS:** *Exhibit A – Hand-delivered invitation to participate in PAC*

**TESTIMONY:** *No written testimony received at the time this report was prepared.*

**SUMMARY:** *Adoption of an Interchange Area Master Plan (IAMP) for the I-84/US395 Interchange, which also includes an amendment to the City of Pendleton Comprehensive Plan Goal 12 (Transportation) element.*

The Planning Commission considered this matter at its October 21, 2010 meeting. The Commission heard an oral staff report, presentation from the applicant, testimony from those in favor, and testimony from those in opposition. There being no further public testimony, the hearing was closed and the Commission began deliberations. A motion was made to continue the hearing to the November 4, 2010 meeting, in order to allow the Commission adequate time to discuss the matter at hand.

This report is a supplement to the October 14, 2010 staff report. The report addresses testimony that was received after the deadline to provide written testimony (for inclusion in the packets with the staff report). Neither staff nor the applicant had time to properly respond to the testimony presented, which in turn prevented the Commission from making adequate findings and conclusions to justify a recommendation to the City Council.

This report is not intended to rebut any testimony presented by Doug Hattenhauer at the October 21 meeting, but rather to afford the Commission the opportunity to respond to the issues raised.

**Key:** This report has been arranged by font to assist the Commission in identifying issues.

Issues raised by Mr. Hattenhauer based on fax read into record at the hearing are in **Calibri** and are justified left

Any language by staff is in **Times New Roman** and is justified

All code language (both local and State) is in **Agency FB** and is justified

1. What are the impact fees and how will the fees be assessed and against which property owners, etc?

Fees are discussed on pages 5 and 6 of the September 16, 2010 memorandum from Angelo Planning Group, which addresses implementation strategies. The memorandum is available on the City web site.

**SECTION 179. SUPPLEMENTAL TRANSPORTATION SYSTEM DEVELOPMENT CHARGE**

**For Discussion:** A supplemental transportation SDC for the IAMP area needs to be discussed. A separate ordinance or set of ordinance amendments would need to be developed, including definition of the area to which the supplemental SDC would apply, the methodology for calculating the SDC, and the list of projects in the interchange area for which the SDC would be eligible. Peak hour trips in this area are often the result of parents driving kids to Sunridge Middle School, which may result in a peak longer than an hour in both the a.m. and p.m.

A supplemental SDC within the IAMP area has been considered as one possible method of funding assistance. Establishing a supplemental SDC, and determining what that SDC should be, is not within the scope of an

IAMP. The Plan merely offers such fees as one possible source of funding, should the City Council wish to go in that direction.

2. ODOT did not include in its plan to extend the East off-Ramp to help minimize any queuing issues that ODOT has indicated might occur within the existing plan. Why did ODOT not consider extending the off-ramp?

The Commission may wish to reopen the hearing to new testimony from the applicant and/or ODOT staff in order to respond to this question. Additional queuing capacity (distance) does not improve through-put efficiency of the intersection; it merely allows the ramp to store more vehicles. Efficiency is not improved because it does not permit any additional vehicles to pass through an intersection during a given cycle.

3. Phase 3 of the plan has greatest impact on existing properties on the Southside. Our company would encourage before Phase 3 could be implemented that the Plan requires ODOT and the City to allow another public hearing before the planning commission and Council to ensure the plan makes sense 10-12 years later. We are asking that the Planning Commission include in the plan to be presented to the council that a hearing would be required before Phase 3 could be implemented.

Given the amount of time between identifying a problem, coming up with a plan to mitigate the problem, adopting said plan, securing funds to design improvements to implement the plan, and perhaps waiting again to secure funds for construction, delaying action until future public hearings occur has the potential to delay construction an additional 5-15 years.

The purpose of the Plan is to establish specific standards to evaluate when future improvements should occur. Those triggers are specifically outlined in Section 180 IMPLEMENTATION (Subsection D. Monitoring Responsibilities) on page 7 of the September 16, 2010 memorandum from Angelo Planning Group, reproduced below:

#### D. Monitoring Responsibilities

The details of City monitoring responsibilities will be established in the I-84/US 395 Interchange Area Supplemental Transportation SDC (STSDC) Ordinance and the approved I-84/US 395 IAMP City of Pendleton/Oregon Department of Transportation Intergovernmental Agreement (IGA).

1. The City will develop an Annual IAMP Report that details program management issues and recommends index adjustments to the STSDC rates for the coming year. The City will provide the Annual IAMP Report to ODOT to allow for coordination of management issues, such as updating the monitoring process and the timing for the next IAMP update.
2. The agencies will review the IAMP pursuant to the review triggers. This review shall be conducted through a meeting initiated by the City of Pendleton or ODOT and shall include all affected agencies.
3. IAMP review triggers may be based on criteria such as set time periods, queuing thresholds, and alternative mobility standards. They shall be specified in the implementation section of the IAMP and in the City/ODOT IGA.

#### IAMP Review Triggers

- a. Periodically, the implementation program shall be evaluated to ensure it is accomplishing the goals and objectives of the IAMP.
- b. Events that will trigger an IAMP review include:
  - 1) Every fifth year from the date of IAMP adoption or latest update. I-84/US 395 IAMP: Proposed Policies and Code
  - 2) Plan map and zone changes that have a "significant effect" per the Transportation Planning Rule and impact the I-84/US 395 Interchange, or that are located within the IOD.
  - 3) The 95th-percentile northbound left-turn queue at the existing SW Emigrant Avenue/SW 20th Street intersection backs past the I-84/US 395 Westbound ramp terminal.
  - 4) The 95th-percentile southbound left-turn queue at the US 395/SW Hailey Avenue-SW Tutuilla Creek Road intersection spills into the US 395 through lanes and backs up into the I-84/US 395 Eastbound ramp terminal.
  - 5) Mobility measures at the I-84 ramp terminals exceed the adopted alternative mobility standard of a volume-to-capacity ratio of 0.86 along US 395 from the I-84 Westbound ramp terminal to the realigned SW Hailey Avenue intersection.

***For Discussion:*** Review triggers may be codified (as proposed above), could be adopted at the policy level through the IAMP document itself, and/or could be enacted through the provisions of an intergovernmental agreement (IGA) between the City and ODOT.

4. In addition to the established triggers for IAMP review, the agencies can request a review of the IAMP at any time if, in their determination, specific land use or transportation changes warrant a review of the underlying assumptions and/or recommendations within the IAMP.
  5. If the participants in the IAMP review meeting agree that an IAMP amendment is not warranted after examining the impacts of the conditions that triggered the review, a recommendation of "no action" may be documented and submitted in the form of a letter to the City of Pendleton City Council and the Oregon Transportation Commission (OTC).
  6. If the need for an update to the plan is found during IAMP review, review participants will initiate an IAMP update process. Initial steps in updating the IAMP will include scoping the planning process, identifying funding, and outlining a schedule for plan completion. Once completed, IAMP updates shall be required to be legislatively adopted as amendments to the City of Pendleton TSP and Comprehensive Plan and as an update to the OHP, requiring a City Council public hearing and an OTC hearing.
4. We are concerned with the costs of the plan. Plan only has best guesses but not necessarily realistic. ODOT is required under Access Management Plan 734-051-0155 (5)(g) CONSIDER WHETHER IMPROVEMENTS TO LOCAL STREET NETWORKS ARE FEASIBLE. There has not been any feasibility studies made only guesses as to the costs of the projects. Cost of the projects does not meet the feasibility standards as required by ODOT rules and guidelines.

The Commission may wish to reopen the hearing to new testimony from the applicant and/or ODOT staff in order to respond to this question. The language referenced above is reproduced below:

**Oregon Administrative Rules, Division 51  
Highway Approaches, Access Control, Spacing Standards and Medians  
734-051-0155**

**Access Management Plans and Interchange Area Management Plans**

- (1) The Department encourages the development of Access Management Plans and Interchange Area Management Plans to maintain and improve highway performance and safety by improving system efficiency and management before adding capacity. Access Management Plans and Interchange Area Management Plans:
  - (a) Must be consistent with Oregon Highway Plan;
  - (b) Must be used to evaluate development proposals; and
  - (c) May be used to determine mitigation for development proposals.
- (2) Access Management Plans and Interchange Area Management Plans must be adopted by the Oregon Transportation Commission as a transportation facility plan consistent with the provisions of OAR 731-015-0065. Prior to adoption by the Oregon Transportation Commission, the Department will work with local governments on any amendments to local comprehensive plans and transportation system plans and local land use and subdivision codes to ensure the proposed Access Management Plan and Interchange Area Management Plan is consistent with the local plan and codes.
- (3) The priority for developing Access Management Plans should be placed on facilities with high traffic volumes or facilities that provide important statewide or regional connectivity where:
  - (a) Existing developments do not meet spacing standards;
  - (b) Existing development patterns, land ownership patterns, and land use plans are likely to result in a need for deviations; or
  - (c) An Access Management Plan would preserve or enhance the safe and efficient operation of a state highway or interchange.
- (4) An Access Management Plan may be developed:
  - (a) By the Department;
  - (b) By local jurisdictions; or
  - (c) By consultants.
- (5) An Access Management Plan must comply with all of the following criteria, unless the Plan documents why a criterion is not applicable:
  - (a) Include sufficient area to address highway operation and safety issues and development of adjoining properties including local access and circulation.
  - (b) Describe the roadway network, right-of-way, access control, and land parcels in the analysis area.
  - (c) Be developed in coordination with local governments and property owners in the affected area.
  - (d) Be consistent with any applicable Interchange Area Management Plan, corridor plan, or other facility plan adopted by the Oregon Transportation Commission.
  - (e) Include policies, provisions and standards from local comprehensive plans, transportation system plans, and land use and subdivision codes that are relied upon for consistency and that are relied upon to implement the Access Management Plan.

- (f) Contain short, medium, and long-range actions to improve operations and safety and preserve the functional integrity of the highway system.
  - (g) Consider whether improvements to local street networks are feasible.**
  - (h) Promote safe and efficient operation of the state highway consistent with the highway classification and the highway segment designation.
  - (i) Consider the use of the adjoining property consistent with the comprehensive plan designation and zoning of the area.
  - (j) Provide a comprehensive, area-wide solution for local access and circulation that minimizes use of the state highway for local access and circulation.
- (6) The Department encourages the development of an Interchange Area Management Plan to plan for and manage grade-separated interchange areas to ensure safe and efficient operation between connecting roadways:
- (a) Interchange Area Management Plans are developed by the Department and local governmental agencies to protect the function of interchanges by maximizing the capacity of the interchanges for safe movement from the mainline facility, to provide safe and efficient operations between connecting roadways, and to minimize the need for major improvements of existing interchanges;
  - (b) The Department will work with local governments to prioritize the development of Interchange Area Management Plans to maximize the operational life and preserve and improve safety of existing interchanges not scheduled for significant improvements; and
  - (c) Priority should be placed on those facilities on the Interstate system with cross roads carrying high volumes or providing important statewide or regional connectivity.
- (7) An Interchange Area Management Plan is required for new interchanges and should be developed for significant modifications to existing interchanges. An Interchange Area Management Plan must comply with the following criteria, unless the Plan documents why compliance with a criterion is not applicable:
- (a) Be developed no later than the time an interchange is designed or is being redesigned.
  - (b) Identify opportunities to improve operations and safety in conjunction with roadway projects and property development or redevelopment and adopt policies, provisions, and development standards to capture those opportunities.
  - (c) Include short, medium, and long-range actions to improve operations and safety within the designated study area.
  - (d) Consider current and future traffic volumes and flows, roadway geometry, traffic control devices, current and planned land uses and zoning, and the location of all current and planned approaches.
  - (e) Provide adequate assurance of the safe operation of the facility through the design traffic forecast period, typically 20 years.
  - (f) Consider existing and proposed uses of all the property within the designated study area consistent with its comprehensive plan designations and zoning.
  - (g) Be consistent with any applicable Access Management Plan, corridor plan or other facility plan adopted by the Oregon Transportation Commission.
  - (h) Include polices, provisions and standards from local comprehensive plans, transportation system plans, and land use and subdivision codes that are relied upon for consistency and that are relied upon to implement the Interchange Area Management Plan.

Staff, as a participant in the Technical Advisory Committee and an attendee at the Public Advisory Committee meetings, notes that a variety of options were considered prior to recommendation of the final plan submitted for approval. The feasibility of each plan was evaluated, as shown in Section 6 of the draft IAMP. The evaluation criteria included:

- Operations
- Non-Vehicular Travel
- ROW Impacts
- Cost and Feasibility
- Environmental Impacts
- Compatibility
- Access Spacing

Both advisory committees recommended the same preferred alternatives for the north and south sides of the Exit 209 interchange based on the evaluation criteria.

5. ODOT has failed to take into account the impact to existing businesses by the changes proposed. We would ask the planning commission to make part of the plan a requirement by ODOT to assess the impact the changes will have on existing business from any loss of access as proposed in the plan. How is ODOT mitigating any losses to property owners for loss of business because of access changes?

Staff refers to the notes from the previous question, above. Cost and feasibility studies within Section 6 included an evaluation of business impacts. What was not included in this analysis was an estimate of lost value to properties south of the interchange that would not be permitted to develop if an IAMP is not implemented.

6. ODOT has failed in the plan to address who or whom will be paying for the changes to be made in the plan. What costs will be paid by the property owners? Who is going to pay for the new driveways?

Neither the City nor ODOT may pursue funding until a plan is adopted both locally and at the State level; adoption of a Plan allows all parties to consider and pursue all funding options. The City and ODOT would be “putting the cart before the horse” if they were to require public improvements or seek funds for same from local businesses or property owners to construct said improvements before a plan to do so was adopted. This level of detail is not part of the scope of an IAMP.

Pursuant to City of Pendleton Ordinance No. 3481, the City may require direct mitigation from any new development. Traffic Impact Studies are used to determine impacts, and propose mitigations. Under existing requirements, the types of development Pendleton is most likely to see may proceed without a TIS. This leaves the City without a procedure to identify and assess traffic impacts resulting from new development, and consequently leaves the City without a method of pursuing mitigation. Upon adoption of the IAMP, it will be easier for the City and ODOT to monitor impacts, pursue a plan for mitigation, assess the cost of mitigation measures, and assign the appropriate costs to the appropriate parties.

### **Ordinance No. 3481**

SECTION 5. Development Requirements. The following requirements shall pertain to all development falling under the categories identified in

#### **B. Transportation Impact Study**

- (1) A transportation impact study shall be required for all development applications in which the proposed development is projected to have an impact upon any affected transportation corridor or intersection of local significance, unless the development application is exempt from the provisions of (A) 7 this section or the requirement for a study has been waived by the Public Works Director.
- (2) A transportation impact study shall include, at a minimum, an analysis of the following elements:
  - (a) Trip generation, modal split, distribution, and assignment for the proposed development; and
  - (b) An analysis of the projected impact of the proposed development upon the current operating level of any affected transportation corridor or intersection of regional significance.

A transportation impact study shall be prepared by and/or under the supervision of a registered professional traffic engineer in the state of Oregon.

A transportation impact study shall be based on traffic counts obtained within twenty (12) months of the date of the development application. The traffic counts shall reflect representative traffic conditions within transportation corridors and at intersections of significance. The Public Works Director may request new counts be taken or estimated when recent development renders counts from within the previous 12 month period to no longer be accurate.

A transportation impact study shall analyze impacts on affected transportation corridors or intersections of significance between the subject development and the state highway system. The City staff will provide the list of these intersections for different areas of the City, based on analysis from the State Transportation Planning and Analysis Unit (TPAU). Intersections of significance shall include all those with an arterial or collector level roadway as defined in the TSP.

The Public Works director reserves the right to require an applicant to provide additional data and/or analysis as part of a particular transportation impact study, where the Public Works director determines that additional information or analysis is required to implement the standards and requirements contained in this section.

No traffic impact study shall be required, pursuant to the provisions of this section, where the proposed development will include fewer than 50 single family residential units, 83 multi family units, or 50,000 square feet of non-residential space.

Upon the written request of an applicant, the Public Works Director may waive the requirement for a transportation impact study, or limit the scope of analysis and required elements of a traffic impact study where the Public Works Director determines that the potential transportation impacts upon the affected transportation corridor.

The Traffic Impact Study will be used to determine impacts, and propose mitigations. The City will negotiate with the applicant to determine the most appropriate mitigations. These mitigations shall then be provided by the applicant or an equivalent payment must be made so that the City can initiate the required transportation system improvement project. These improvements must be proportionate and directly related to the impacts of the proposed development.

7. ODOT in this plan is attempting to enforce its 1320 foot rule when ODOT is already granting separation in traffic will before this distance. ODOT says where possible it should provide this access distance but it is not mandatory as the plan tries to call for. We ask as far as our driveways (access) the 1320 separation be eliminated.

Staff recommends the Commission reopen the hearing to testimony from either the consultant or ODOT staff to address the ¼ mile standard and what justification may exist for exceptions.

8. The plan calls for a raised median in the long term on pg. 134. It would also restrict traffic to right-in/right-out. We would ask that before this could be implemented in the plan that it would require a hearing in front of the planning commission and City Council before this phase could be accomplished. There has been no feasibility plan as to the cost to businesses if this plan would be implemented. This should be required prior to adoption of this provision. Fig. 7-6 shows plan in blue and states to be implemented in phase 3 which is in error. This provision should be in Phase four (4). Also the advisory committee (businesses) had made a recommendation to avoid any medians that has apparently been ignored.

As noted above, under the specific IAMP triggers outlined in the Plan, improvements will not be contemplated until such time as certain thresholds are met. The center median would not occur until Phase 3 of the Plan, when traffic reaches a point that uncontrolled left turn movements into or out of the identified properties reduces the efficiency and safety of the entire system. It is the City's understanding that ODOT is fully within its powers to install a center median whether or not the IAMP is adopted, if certain warrants are met. The applicant and/or ODOT staff may provide the Commission with additional information on this matter, should the Commission elect to reopen the hearing.

9. Before phase 3 could be enforced on the South side we would ask that it would be required in the plan that the proposed SW 30<sup>th</sup> Ave. would have to be developed. This should extend the life of the intersection will beyond the 20 year study plan (IAMP). Phase three (3) possible could be delayed or not required at all because of the 95% or trigger point.

The City is well aware of the efficiency gains that would occur through construction of any new connection between Southgate and Tutuilla Road, SW 30<sup>th</sup> or otherwise. The IAMP recommends construction of a 30<sup>th</sup> Street extension as a City project complementary to the IAMP improvements, recognizing that any such project will not be eligible for IAMP funding. Direct connection between a SW 30<sup>th</sup> extension and IAMP improvements is therefore not feasible.

10. A trigger point is the 95<sup>th</sup> – percentile as to the phasing plans. We would ask that if these trigger points are reached that a public hearing would be required at the planning commission and City Council before any of the phases could be implemented. This should help make sure that all parties are on the same page at that point instead of guessing 12 to 15 years prior to what is current reality.

The IAMP lays out clear triggers to require improvements, which are well above the standard triggers. The Commission may request testimony from either the applicant or ODOT staff to address the “standard” triggers for improvements/mitigation to occur.

11. ODOT has failed to inform the property owner in writing and/or verbally the potential of closing one or more access points to individuals properties other than the hearing process we are going through today. ODOT is required under and Access plan that the plan is to be developed with local governments and property owners in the affected area. ODOT has failed to do so or insured that other have done so. We had asked previously

how are business will be impacted, the traffic flow that ODOT is proposing for our location, turning radius for ingress and egress, etc. We have heard nothing. These issues should all be addressed prior to any approval by the commission. We ask that before this plan is approved that ODOT and City address each property owners concerns and how the plan impacts the business, and if the business is viable once the plan is implemented. For instance the IAMP proposes to close one of our access points but have not address any of the above issues. For instance if a customer comes into our property from the freeway how is that customer going to get back to the freeway under Phase 3. These issue should be resolved before the Council approves any plan.

City staff, the consultant team, and ODOT worked together to involve the public from the earliest phase of this project. City staff personally delivered a notice to all properties along Southgate as well as every property that was identified as potentially affected north of Exit 209 the week of June 5, 2009. The notice invited all persons to participate in the Public Advisory Committee (PAC). Those who expressed interest were all included in the PAC and provided the critical public input that resulted in the Plan currently under consideration. Other members of the public were always welcome to attend the PAC meetings, and those who chose to do so were given the opportunity to provide input. The alteration or closure of individual driveways was discussed during this process, with the understanding that detailed examination of such specifics was not the intent of the Plan.

12. Our access points our grandfathered in under Division 51 rules. We asked ODOT to address this issue but ODOT has failed to do so. Please consider the following:
  - A. ODOT has failed to recognize our access points are grandfathered in.
  - B. Our site was one of the first businesses built on Southgate at present location when freeway access was available. ODOT has granted us access and made improvements to our access prior to April 1, 2000
  - C. ODOT's OAR 734-051-0035(2) provides that "Division 51 rules do not affect existing rights of owners of grandfathered approaches, except where these rules specifically state their application to grandfathered approaches, as in OAR 734-051-0045, Change of use of an approach."
  - D. Under OAR 734-051-0135 et seq., outline the provisions for granting deviations from Access Management spacing Standards This rule, including OAR 734-051-0135 (3) does not specifically provide that it applies to grandfathered approaches. Hence, access management spacing standards, and deviations there from, only apply to our property if there is a change in use or there exists a legitimate and expressly identified safety concern. OAR 734-051-0125(1)(c). None has been identified..
  - E. Under OAR 734-051-0045 applies to grandfathered approaches if there is a change of use as defined by ODOT standards and if we do not change use then unless there is a safety concern our access is not subject to modification per the OAR'S.

Staff requests the Commission reopen the hearing to testimony and direct question on this matter to either the applicant or ODOT staff, in order to address this concern to their satisfaction.

In summary we need to maintain our existing access points ingress and egress. Right-in and Right-out is not acceptable to our current and future business clientele, installing a median would be unacceptable to our customer base now and in the future, ODOT needs to show cause as to safety issues that have not been addressed if they are going to take away our grandfathered rights, allow for public hearing in the future on any trigger points before implementation, ODOT pay for loss of business to property owners when losing access, feasibility of the project has not been confirmed, etc.

**Letter faxed to City on Tuesday, October 19, 2010 (original was provided at October 21 meeting)**

1. On page 120 of the Plan (August 2010 version) calls for impact fees and these impact fees need to be defined as how they will be assessed, amounts, and against which property owners before this plan is sent to the Council.

Please see the first question from the original letter, addressed on page 1 of this report.

2. We are concerned with the cost of the plan. Plan only has best guess approach but not necessarily realistic. ODOT is required under Access Management Plan 734-051-0155 (5)(g) CONSIDER WHETHER IMPROVEMENTS TO LOCAL STREET NETWORKS ARE FEASIBLE. Potential costs do not meet feasibility standards as required by ODOT rules and guidelines. On page 120 the Plan states: "The AMP/S contains an access management plan"... Plan therefore needs to address if local networks are feasible. We ask that before any plan is adopted that the plan determines if indeed it is feasible to move forward. (Plan states on pg 124 cost estimates based on 2010 dollars.

Please see response to question 4 of original letter on page 3 of this report.

3. The plan fails to address who will be paying for the changes to be made in the plan. What costs will be paid by the property owners, tax payers, etc for the changes to be made in the IAMP? The commission should make sure prior to sending to the Council these issues and or obligations have been met.

Please see responses to questions 1, 4 and 6 from previous letter.

4. We ask that the planning commission before adoption of the IAMP that the following be required in the plan:
  - A. Require as part of the plan the extension of the EAST OFF Ramp to help minimize and queuing issues that ODOT has addressed as concerns in the plan. Extending the off ramp would minimize any queuing issues at the first stop light to prevent any interference with the freeway traffic. The cost would be very minimal to ODOT to extend the off ramp.
  - B. Require as part of the plan before phase 3 could be implemented that SW 30<sup>th</sup> Ave. be developed. This should extend the life of the existing intersections. This alone should help alleviate the need for the new SW Hailey Avenue Intersection at least within the 20 year horizon or triggering the 95<sup>th</sup>-percentile southbound left-turn queue at the US 395/SW Hailey Avenue-SE Tutuilla Creek Road intersection. The development of SW 30<sup>th</sup> if developed properly would help alleviate this trigger point that ODOT is concerned with.
- A) Please see response to Question 2 of the original letter on page 2 of this report. The cost to extend the eastbound off ramp would be very high relative to the minimal benefits.
- B) Please see response to Question 9 on page 6 of this report. The IAMP recommends that the City consider amending its TSP to include the SW 30<sup>th</sup> extension from Southgate to Tutuilla instead of the Ladow connection that is currently proposed. The 30<sup>th</sup> Street extension (recommendation) is not part of the IAMP and would not be eligible for funding for design or construction from the same sources.
5. ODOT plan in an ideal world would ask that there is not access within 1320 feet of any interchange. On the South side this is impractical. ODOT rules state is should require access but it is not mandatory as to the 1320 foot requirement as ODOT plan calls for or implies. ODOT is already granting separation with the stop light at Tutuilla/Hailey/395 intersection. The plan calls for elimination of one of our driveways in Phase 3 based on above criteria of 1320 feet.

Please see response to question 7 of original letter on page 6 of this report.

6. ODOT has failed to inform the property owner in writing and/or verbally the potential of closing one or more access points to individual property owners other than the hearing process we are going through today. ODOT is required under 734-051-0155 Access Management Plans (5)(c) "be developed in coordination with local governments and property owners in affected areas", ODOT has failed to meet this provision. We would ask that the planning commission make this a required recommendation before this plan is sent on the Council. ODOT is proposing to take one of our driveways and provide a different access:

- A. Pg. 133 – U S 395 plan states: "One driveway into the 76 gas station will remain" has not been discussed with me or my company. ODOT has failed to explain which driveway, turning radius of Trucks fueling the site, access to and from site, etc.
- B. "A new access roadway into the gas station from SW Hailey Avenue will be constructed in order to allow for minimal out-of-direction travel and safe and efficient access has never been discussed with our company or the property owner.

Again we ask that these issues be reviewed with the property owner prior to any approval by the Commission as to this plan before being sent to the

Council.

734-051-0155 was reproduced in its entirety in response to question 4 of the original letter. The Plan was developed "in coordination with local governments and property owners in affected areas" as mandated by Division 51. Mr. Hattenhauer was contacted in June of 2009 when the City sought volunteers to participate in the PAC. Although he did not indicate an interest in participating, he was in attendance at later meetings of the PAC and was afforded the opportunity to provide input.

As noted previously, an IAMP is a general plan; specifics regarding actual alignment of roads and closure/relocation of driveways are not within the scope or budget of the project. Final design details will not be resolved until a budget is secured to examine each property "on the ground."

7. Our access points are grandfathered in under Division 51 rules; we asked ODOT to address this issue but ODOT has failed to do so. Please consider the following:
- A. ODOT has failed to recognize our access points are grandfathered in.
  - B. Our site was one of the first businesses built on Southgate at present location when freeway access was first available. ODOT has granted us access and made improvements to our access prior to April 1, 2000.
  - C. ODOT's OAR 734-051-0035(2) provides that "Division 51 rules do not affect existing rights of owners of grandfathered approaches, except where these rules specifically state their application to grandfathered approaches, as in OAR 734-051-0045. Change of use of an approach."
  - D. Under OAR 734-051-0135 et seq., outline the provisions for granting deviations from Access Management spacing Standards. This rule, including OAR 734-051-0135 (3) does not specifically provide that it applies to grandfathered approaches. Hence, access management spacing standards, and deviations there from only apply to our property if there is a change in use or there exists a legitimate and expressly identified safety concern, OAR 734-051-0125 (1)(c). None has been identified.
  - E. Under OAR 734-051-0045 applies to grandfathered approaches if there is a change of use as defined by ODOT standards and if we do not change use then unless there is a safety concern our access is not subject to modification per the OAR's.

Based on A-E above the commission needs to address grandfather issues before sending to the Council

This same question was posed in question 12 of the previous letter. ODOT controls all access to ODOT facilities,  
*Planning Commission Staff Report, supplemental (AMD10-03) –I-84/US395 IAMP*

and may, at its discretion, require changes to access if certain warrants are met. Warrants generally pertain to capacity and safety issues, which are interrelated. As traffic increases, safety generally decreases. These changes to either improve safety or maintain/improve mobility standards, may be required by ODOT at any time, with or without an adopted IAMP.

The City is not in a position to interpret ODOT standards, especially those regarding to grandfathered approaches. The remaining sections of 734-051 referenced above should be addressed by new testimony from either the applicant or ODOT staff should the Commission elect to reopen the hearing.

8. The plan calls for a raised median in the long term plan on pg. 134 as well as potentially restricting traffic to right-in/right-out from SW Tutuilla Creek Road to the new SW Hailey Avenue intersection. In Fig. 7-6 shows plan in blue and states to be implemented in Phase 3 which must be an error. A long term plan should be considered Phase 4 if at all. The advisory committee for businesses had made a recommendation to avoid any medians on US 395 (Southgate). We would ask that this is beyond the 20 year horizon and be taken out of the plan or if at the very least would require a future hearing in front of the planning commission and the Council before the Long Term Phase could be built or enforced by ODOT.

City staff reminds all parties that Southgate/US 395 is an ODOT facility. As in question 7 above, ODOT may require changes to an ODOT facility, including installation of a center median, at any time certain warrants are met. Installation of such traffic safety measures would not require a hearing before either the Planning Commission or the City Council.

9. ODOT has failed to take into account the impact to existing businesses by the changes proposed. We ask that the commission as part of the plan that ODOT assess the impact to any business that will lose existing access. Require ODOT to address any mitigation as to property owner's loss of business because of the plan.

The purpose of an IAMP is to ensure the long-term functionality of one of the largest single investments in Pendleton, public or private. ODOT and the City both recognize that long term trends indicate the intersections north and south of Interstate 84 Exit 209 will fail within the 20 year planning period; some movements at these intersections are already at failure during peak periods. The potential impacts of doing nothing include:

- A) Traffic will increase to the point that driver and pedestrian safety will both plummet;
- B) Traffic congestion will increase to the point that travel times will no longer be predictable;
- C) The likelihood of delays will encourage interstate travelers to stop at other exits for food and fuel, skipping Exit 209 entirely;
- D) When the US395/Hailey/Tutuilla intersection is at failure, the City may have no choice but to implement a building moratorium on the entire south side of town. Such a moratorium could make hundreds of acres of land inside the City limits zoned both residential and commercial unbuildable. Such a moratorium could even prevent St Anthony Hospital from relocating to it property on Southgate. Staff is unable to calculate an estimate of the lost value to these property owners.

10. The plan is a long range plan and plan calls for no reviews once plan is adopted by the planning commission or the Council. The third phase may not ever take place or if required it is 12-15 years away. We ask the Commission that once ODOT wants to enforce the trigger points that a requirement in the plan is that it would require a review by the commission and council so that all parties have an opportunity to determine that everyone is on the same page and this plan is the best going forward.

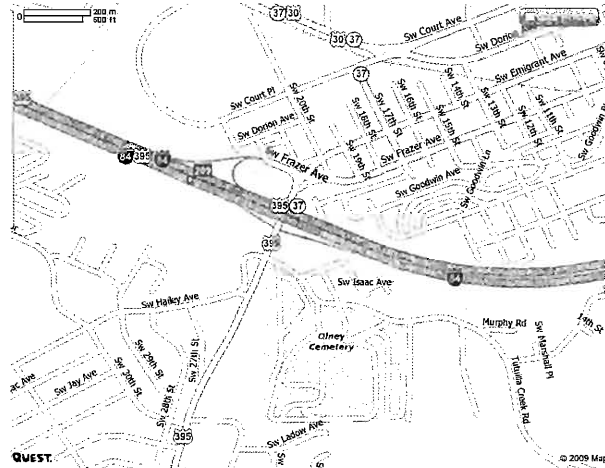

Please see question 3 on page 2 of this report.

***City of Pendleton Announces Work to Begin on a Management Plan for I-84 Exit 209 (Southgate, Emigrant/Frazer), Seeks Citizen Input***

**June 5, 2009**

The City of Pendleton Planning Department is working with ODOT to create an Interchange Area Management Plan (IAMP) for Interstate 84 Exit 209. The Plan will serve to maintain the functionality of the interchange area for the next 20 years. Property owners within 1/3 mile of the interchange may be impacted directly through changes in the traffic network, or access to it (driveways). Any person who uses the interchange area may expect to see changes as a result of the new Plan.

**The City is seeking five property owners/merchants from each side of the interchange to participate in a Citizens Advisory Committee.** Members of this committee will work with City staff, ODOT and a consultant team to identify preferred alternatives for access ramps and the transportation network in the vicinity of the ramps, with a specific emphasis on minimizing harmful traffic impacts on the interchange. Participants will explore options to improve transportation in and around the interchange area for vehicles, bicyclists and pedestrians. Members will be expected to attend several meetings, typically held on Thursdays during business hours. **The first meeting is tentatively scheduled for Thursday, June 25.**

The City and ODOT are working together to make sure travel to and within the City of Pendleton is quick, easy and trouble-free for the foreseeable future. The Advisory Committee will help us accomplish this task.

There will be public hearings prior to adoption to ensure the public has access to all materials and recommendations. All materials are public documents and will be available in the Planning Department offices or online; copies of all materials will be available for a reasonable cost.

For additional information on any aspect of the project, or to participate in the Advisory Committee, contact Evan MacKenzie or visit the Planning Department page at [www.pendleton.or.us](http://www.pendleton.or.us).

***The City of Pendleton Planning Department administers the City's Zoning and Subdivision Ordinances, and is also responsible for long-range planning responsibilities within Pendleton and its Urban Growth Boundary.***

## Preface

The development of this plan was guided by the Project Management Team (PMT), Technical Advisory Committee (TAC), and Public Advisory Committee (PAC). The PMT, TAC, and PAC members are identified below, along with members of the consultant team. The PMT members were all part of the TAC and primarily coordinated between meetings on project management tasks related to project schedule and meeting logistics. The PMT included representation from ODOT, the City of Pendleton, and the consultant team. The TAC and PAC members were responsible for reviewing all work products and guiding the planning work. They devoted a substantial amount of time and effort to the development of the I-84/US 395 Interchange Area Management Plan (IAMP), and their participation was instrumental in the development of the recommendations that are presented in this plan.

## **Glossary of Frequently Used Acronyms**

**AMP** – Access Management Plan

**HDM** – Oregon Department of Transportation Highway Design Manual

**IAMP** – Interchange Area Management Plan

**IMSA** – Interchange Management Study Area

**LOS** – Level of Service

**OHP** – Oregon Department of Transportation Oregon Highway Plan

**PAC** – Public Advisory Committee

**PMT** – Project Management Team

**TAC** – Technical Advisory Committee

**TSP** – Transportation System Plan

**V/C** – Volume to Capacity Ratio

**Section 1**  
Introduction

## Introduction

An Interchange Area Management Plan (IAMP) has been prepared for the Interstate-84 (I-84) / US 395 Interchange in Pendleton, Oregon. The following section provides an overview of the purpose and intent of the IAMP and defines: the interchange function, the project goals and objectives, and the study area. These elements have been defined through a collaborative effort between the project Technical Advisory Committee (TAC) and Public Advisory Committee (PAC).

## PURPOSE AND INTENT

The IAMP is a strategic and dynamic transportation plan that is designed to protect the long-term function of the I-84/US 395 interchange by preserving the capacity of the interchange while providing safe and efficient operations between connecting roadways. The IAMP identifies land use management strategies, short-, medium-, and long-term transportation improvements, access management plans, and strategies to fund identified improvements.

The IAMP planning efforts have resulted in policies, ordinances, and other provisions that will be adopted into the City of Pendleton's Transportation System Plan (TSP) and Comprehensive Plan. The IAMP will be adopted by the Oregon Transportation Commission (OTC) as an amendment to the Oregon Highway Plan.

## PROBLEM STATEMENT

Because of topographic constraints and the construction of I-84, there are only two existing opportunities for access between the areas of Pendleton to the north and south of I-84: US 395 and OR 11. The resulting level of cross-town traffic, especially in the vicinity of the I-84 interchange with US-395, makes it very difficult for motorists exiting the freeway to access downtown, and subsequently, both of the ramp termini operate over capacity. Queues on the eastbound off-ramp are forecast to back onto the mainline of I-84 by the year 2025. Traffic operations within the vicinity of the interchange are also poor. In particular, the operations of the Tutuilla Creek-Hailey Road/US 395 and the 20<sup>th</sup> Street/Court Place intersections will all need to be improved. There are several direct accesses from commercial properties onto US 395 south of the interchange. The Oregon Department of Transportation (ODOT) initiated the IAMP process to ensure that growth and development will occur in the interchange study area without compromising the operation of the interchange. The IAMP identifies transportation improvements, land-use strategies, and implementation policies. It also satisfies the requirements of Oregon Administrative Rule (OAR) 734-051 and has been developed according to the ODOT IAMP guidelines.

## **INTERCHANGE DESCRIPTION**

The I-84/US 395 interchange is an urban interchange that connects US 395, a statewide highway and freight route, with I-84. It is one of five interchanges serving Pendleton. US 395 serves as a major connection between the north and south sides of the Pendleton community. It is a five-lane facility through the I-84 interchange area and then transitions into a couplet facility north of the freeway comprised of SW Frazer and SW Emigrant Avenues. This couplet provides access to downtown Pendleton. Much of the traffic flow in this area is focused on the SW Emigrant Ave/SW 20<sup>th</sup> St intersection, with traffic coming to and from the US 30 couplet of SW Court Avenue and SW Dorion Avenue and US 30 (Westgate Avenue). These roads also provide access to downtown, as well as to the Eastern Oregon Correctional Facility, Eastern Oregon Regional Airport at Pendleton, Pendleton Round-up grounds, and other industrial and residential areas. The couplet also connects to OR 11, which travels north into Milton-Freewater, Oregon and Walla Walla, WA. To the south, US 395 serves commercial uses and connections to residential areas before continuing south through the communities of John Day and Burns.

The land uses within the immediate vicinity of the interchange are primarily commercial. Residential areas are located off local streets connecting to US 395 and along the Frazer-Emigrant couplet.

### ***Interchange Function Statement***

Following is the function and policy definition for the I-84/US 395 Interchange:

*“The transportation function of the I-84/US 395 Interchange is principally to provide safe and efficient access to downtown Pendleton and the residential areas south of I-84, including local traffic traveling between these two areas. In addition to this primary function, the I-84/US 395 Interchange remains an important facility for accessing the Eastern Oregon Correctional Facility, Blue Mountain Community College, and the residential areas north of downtown. The interchange also serves regional traffic coming from/going to US 395 south of Pendleton and OR 11 northeast of downtown.”*

## **INTERCHANGE MANAGEMENT STUDY AREA**

To provide a comprehensive study and to achieve effective results, the Interchange Management Study Area (IMSA) includes developable and re-developable properties and major roadways that would significantly affect the interchange function over the next 20 years. The IMSA includes properties within ½-mile, and in some cases beyond, from the existing I-84 interchange as defined by the IAMP Guidelines. The IMSA also takes into account facilities and properties that will impact the operations of the interchange and any natural or cultural resources in the vicinity of the interchange.

The IMSA map is shown in Figure 1-1. Figure 1-1 identifies key features and boundaries of the area included in the IAMP. As shown on the IMSA map, two study boundaries are identified: the IAMP Operations and Access Study area and the Land Use Study Area. The following describes the criteria used to create the IMSA map.

H:\profile\9627 - I-84 US 395 IAMP\dwg\figs\9627\_fig-01.dwg Aug 16, 2010 - 4:03pm - jsommerville Layout Tab: Fig. 1-1

**LEGEND**

- - - MINIMUM 1,320-FOOT IAMP LIMITS
- IAMP OPERATION/ACCESS STUDY AREA
- INTERCHANGE MANAGEMENT STUDY AREA (IMSA)

**INTERCHANGE MANAGEMENT STUDY AREA (IMSA)  
PENDLETON, OREGON**

**FIGURE  
1-1**

### **Operations and Access Study Area**

The Operations and Access Study Area includes all access points and intersections within ¼-mile from the existing I-84 interchange and encompass key intersections that have potential to affect traffic operations in the interchange area over the planning period. This study boundary identifies the area for which operational analysis was completed and specifically requires an Access Management Plan (AMP). The study intersections included:

- I-84/US 395 Eastbound Ramp Terminal
- I-84/US 395 Westbound Ramp Terminal
- SW Dorian Avenue / SW 20<sup>th</sup> Street
- SW Court Avenue / SW 20<sup>th</sup> Street
- SW Emigrant Avenue / SW 17<sup>th</sup> Street
- SW Frazer Avenue / SW 17<sup>th</sup> Street
- SW Emigrant Avenue / SW 18<sup>th</sup> Street
- SW Emigrant Avenue / SW 19<sup>th</sup> Street
- SW Frazer Avenue / SW 19<sup>th</sup> Street
- SW Emigrant Avenue / SW 20<sup>th</sup> Street
- US 395 / SW Hailey Avenue
- US 395 / SW 30<sup>th</sup> Street

### **Land Use Study Area**

The Land Use Study Area includes all properties located roughly within a ½-mile of the interchange. The Land Use Study Area extends beyond a ½-mile in places to incorporate developable and re-developable properties that are expected to significantly affect the interchange function over the next 20 years. Properties identified with potential to affect the interchange include those that are expected to utilize the interchange as their primary connection to I-84 or those that may be necessary to examine to improve local circulation.

### **GOALS AND OBJECTIVES**

The IAMP process is intended to protect the function of the interchange for the next 20 years while accounting for changes in land use and traffic patterns. Potential capacity for additional residential development south of the interchange will impact the traffic patterns over this period. As stated in Policy 3C of the 1999 Oregon Highway Plan, “it is the policy of the State of Oregon to plan for and manage grade-separated interchange areas to ensure safe and efficient operation between connecting roadways.” From this definition, the goals and objectives of the I-84/US 395 IAMP are to:

- Protect the function and operation of the existing local street network within the IMSA.

- Ensure changes to the planned land use are consistent with protecting the long-term function of the interchange and the local street system.
- Ensure that the interchange will function to support future local economic development.
- Identify the existing and potential land use designations, intensities, conditions, and actions that could have a *favorable* effect on the facility, or an *adverse* effect on the facility.
- Manage the allowed land uses within the vicinity of the interchange to provide for future economic growth over the next 20 years.
- Identify and prioritize transportation improvements needed to maintain acceptable traffic operations at the proposed interchange while providing safe access to adjacent land uses.
- Apply access management techniques and develop a planned local-roadway infrastructure.
- Collaborate throughout the planning process with design professionals, jurisdictional representatives, developers, and local property owners and citizens.
- Comply with the intent of Statewide Planning Goal 1: Public Involvement, 2: Land Use Planning, 5: Natural Resources, 6: Air, Water and Land Resources Quality, 7: Areas Subject to Natural hazards, 8: Recreation Needs, 9: Economic Development, 12: Transportation, and 14: Urban Growth Boundaries.
- Develop implementation policies to be adopted into the City comprehensive plans, transportation system plans, interchange access standards, and zoning ordinances, as appropriate.

## EVALUATION CRITERIA

Based on the above objectives, the following evaluation criteria were assembled to ensure that each identified concept would be evaluated for consistency with the overall intent of the community and the project. The six evaluation criteria are as outlined below:

- **Transportation Operations:** This category consists of those criteria that assess the ability for vehicles to travel through and within the IMSA. Special considerations within this category include safety, local connectivity and mobility, including freight mobility.
- **Land Use:** This category consists of those criteria that assess right-of-way impacts, consistency with adopted land use and economic development plans, transportation capacity impacts of changes in land use intensity, impacts to utilities, and impacts to existing and proposed developments.
- **Economic Development:** This category consists of those criteria that assess the potential for near-term growth (1-5 years), mid-term growth (5-15 years), and long-term growth (15-25 years)
- **Cost:** This category consists of those criteria that assess the practicality of a design concept from a construction cost and feasibility perspective.
- **Environmental, Social, and Equity factors:** This category consists of those criteria that assess the degree to which a concept is compatible with the natural and built environment

including environmental impacts (i.e., storm water drainage and hazardous waste) and socio-economic impacts (i.e., stakeholders' needs).

- **Accessibility:** This category consists of those criteria that assess the ability to access properties and businesses within the IMSA to/from the regional transportation network including the balance between local access and roadway function, future access for undeveloped properties, and adherence to the access spacing standards.

## **DEVELOPMENT OF THE IAMP**

The I-84/US 395 IAMP has been guided by the Technical Advisory Committee (TAC) and Public Advisory Committee (PAC), as well as area residents and business owners. TAC and PAC roster lists are provided in the Preface of this document and in Section 2. Regular TAC and PAC meetings held throughout the course of the project have provided opportunities for the two committees to review and guide the technical analysis prepared by the consultant team and the overall project direction. *A summary of the individual TAC and PAC meetings is provided in the Technical Appendix.*

### **Public Involvement**

In addition to the regular TAC and PAC meetings, local citizens, property owners, and business owners provided their input by participating in three public workshops. The first workshop provided participants with background information on the project and then gave them the opportunity to develop and present their ideas for design concepts. At the second workshop, participants provided their input on the design concepts that had previously been developed. The third workshop focused on a review of the draft IAMP. Members of the public also submitted comments directly to the project management team either through correspondence or by attending a TAC or PAC meeting. In fact, a number of area business and property owners attended the final PAC meetings and provided feedback that was instrumental to the development of the preferred transportation improvement plan. In addition, adoption of the plan will have included public hearings before the City of Pendleton Planning Commission and Council and the Oregon Transportation Commission.

## **IAMP ORGANIZATION AND METHODOLOGY**

The development of the I-84/US 395 IAMP began in May 2009 with the first meeting of the Project Management Team (PMT) and City and ODOT staff. Work with the TAC and PAC began shortly thereafter in June 2009. Since June 2009, these groups participated in an extensive process that involved reviewing existing and future transportation conditions, future land use analyses, interchange design and local access and circulation concepts, and financing options.

Sections 1 through 9 comprise Volume 1 of the IAMP and provide the main substance of the plan. These are supplemented by Technical Appendices in Volume 2 which contains the technical memoranda documenting each step in the process. The organization and description of each element of the IAMP are outlined below:

**Section 1** describes the IAMP process, purpose, and goals and outlines the remainder of the document;

**Section 2** details the interagency and public involvement program;

**Section 3** provides the plan and policy review;

**Section 4** outlines the existing land use patterns and transportation facilities within the IMSA;

**Section 5** documents the future land use and transportation conditions and how they were addressed by the planning effort;

**Section 6** provides a description of the concepts analysis and transportation planning efforts involving the selection of a preferred interchange form, supporting local access and circulation network, access management plan, and land use management plan;

**Section 7** is the I-84/US 395 IAMP, including the local circulation and access elements and the transportation improvement projects that are necessary to ensure the continued long-term safety and function of the interchange;

**Section 8** provides guidance on IAMP adoption, monitoring, and updates; and,

**Section 9** documents how the I-84/US 395 IAMP complies with the Oregon Administrative Rules for the development of an interchange area management plan as well as the Oregon Highway Plan.

**Section 2**  
Interagency and Public  
Involvement Program

## Interagency and Public Involvement Program

As part of the I-84/US 395 Interchange Area Management Plan (IAMP), interagency and public involvement occurred through: a kick-off meeting with agency staff; a Technical Advisory Committee (TAC) and a Public Advisory Committee (PAC) that had regular meetings; three public workshops involving local citizens, property owners, and business owners; a joint work session of the City of Pendleton Planning Commission and City Council that was open to the public; and public adoption hearings in front of the City of Pendleton Planning Commission and Council and the Oregon Transportation Commission. An overview of the TAC and PAC meetings and public workshops is summarized below.

### TECHNICAL ADVISORY AND PUBLIC ADVISORY COMMITTEES

The TAC and PAC guided the planning work and were responsible for reviewing all work products, providing input on all planning recommendations, such as the IMSA, goals and objectives, technical analysis, and the proposed concepts. Ultimately the TAC and PAC helped select the preferred interchange form, local circulation/access, land use management, and coordination elements of the IAMP. In addition, a Project Management Team (PMT) performed a coordination function, planning and executing project management tasks related to project schedule and meeting logistics. The PMT included representation from ODOT, the City of Pendleton, and the consultant team and were all members of the TAC.

Membership on the TAC and PAC was established through input from City and ODOT representatives. A proposed TAC and PAC membership roster was presented and finalized at a project kick-off meeting held May 13<sup>th</sup>, 2009. A list of TAC and PAC members is included in Table 2-1 and 2-2.

**TABLE 2-1 TECHNICAL ADVISORY COMMITTEE**

<b>Agency</b>	<b>Name</b>	<b>Position/Title</b>	<b>Role</b>
City of Pendleton	Evan MacKenzie	City of Pendleton Senior Planner	City Project Manager PMT and TAC
	Bob Patterson	City of Pendleton Public Works Director	TAC
	Tim Simmons	City of Pendleton City Engineer	TAC
	Pete Wells	City of Pendleton City Attorney	TAC
	Larry Dalrymple	City of Pendleton Eastern Oregon Regional Airport Manager	TAC
	Larry Lehman	City of Pendleton City manager	TAC
DLCD	Grant Young	DLCD Field Representative	TAC
Economic Revitalization Team	Scott Fairley	Eastern Oregon Coordinator	TAC
ODOT Region 5	Patrick Knight	ODOT Region 5 Planner	ODOT Project Manager PMT and TAC
	Donald Fine	ODOT Region 5 Traffic Operations & Analysis	TAC
	Tom Kuhlman	ODOT Region 5 Traffic Section Manager	TAC
ODOT District 12	Ken Patterson	ODOT District 12 Area Manager (Interim)	TAC
ODOT Statewide Office	Dave Warrick	ODOT Interchange Engineer	TAC
Umatilla County	Oliver Pahl / Tamra Mabbott	Umatilla County	TAC

**TABLE 2-2 PUBLIC ADVISORY COMMITTEE**

<b>Name</b>	<b>Representing</b>
Bill Arrington	D&B Supply
Chuck Wood	City of Pendleton Planning Commission
Craig Smith	St. Anthony's Hospital
Dan Ball	Pendleton Bicycle Club
Dan Ceniga	City of Pendleton City Council
Dan Mitzimberg	City of Pendleton Transportation Commission
Dave Byrd	City of Pendleton Parks & Recreation
Don Russell	Time-to-Wash
Eric Fanciullo	Denny's Restaurant
Harry Snyder	Dean's Market
Jef Farley	Real Estate and Housing
John Brenne	City of Pendleton City Council
Justin Pearce	City of Pendleton City Council
Loren Schmucker	Keystone RV
Phil Houk	City of Pendleton City Council
Rich Britton	Bank of the West
Rick Oliver	First Church of God
Stacey Bowen	Safeway
Vern Wilcox	Wilcox Furniture
Vince Crawford	City of Pendleton Planning Commission

The TAC members were selected in order to provide representation from key components of interested government agencies. PAC members were selected in order to provide a good representation of City officials, area property and business owners, and other interested citizen groups. In addition to the PAC members, a number of area property and business owners regularly attended PAC meetings and actively participated in the process. An outline of all of the TAC and PAC meetings is included below.

**PUBLIC INVOLVEMENT PLAN**

To ensure that adequate project coordination and public participation occurred throughout the development of the I-84/US 395 IAMP, a series of TAC and PAC meetings, public workshops, and public joint work sessions were held over the course of the project. The City of Pendleton also conducted public hearings to adopt the plan. A summary of all of the meetings associated with the project, as well as the meeting objectives, are summarized in Table 2-3.

**TABLE 2-3 MEETING SUMMARY**

Meeting Event	Date/Location	Meeting Purpose/Objectives
Kick-off Meeting	May 13 <sup>th</sup> 2009/ Pendleton – City Hall	<ul style="list-style-type: none"> <li>- Review Project Goals</li> <li>- Review TAC and PAC Membership</li> <li>- Review Project Schedule</li> </ul>
TAC/PAC Meeting #1	June 25 <sup>th</sup> , 2009/ Pendleton – Vert Club Room	<ul style="list-style-type: none"> <li>- Review Project Schedule and Approach</li> <li>- Presentation: IAMP 101</li> <li>- Review Tech Memorandums #1 and #2 (IAMP Definition and Background and Plans and Policy Review)</li> </ul> <p>The purpose of Meeting #1 was to introduce the I-84/US 395 IAMP project and the consultant team; review the project schedule; review the project goals, objectives, and evaluation criteria; familiarize TAC/PAC members with the IAMP process and their roles; confirm the IMSA; confirm the project schedule; and review the project's policy framework.</p>
TAC/PAC Meeting #2	August 26, 2009/ Pendleton – Vert Club Room	<ul style="list-style-type: none"> <li>- Review Tech Memorandums #3/4 and #5/6 (Existing and Future Conditions)</li> <li>- Presentation: Interchange Design 101/Local Circulation 101</li> <li>- Brainstorm Design Concepts</li> </ul> <p>The purpose of Meeting #2 was to review the existing and future land use and traffic operations and involve the TAC and PAC in a brainstorming exercise to develop interchange design, local circulation, and access management concepts for the existing roadway system.</p>
Public Workshop #1	August 26, 2009/ Pendleton – Vert Club Room	<ul style="list-style-type: none"> <li>- Project Overview</li> <li>- Summary of Existing and Future Conditions</li> <li>- Presentation: Interchange Design 101/Local Circulation 101</li> <li>- Brainstorm Design Concepts</li> </ul> <p>The purpose of the first public workshop was to present the project goals and objectives and findings to date; educate the public and stakeholders on the IAMP process and interchange design and access management practices; and engage the participants to help develop potential interchange design, local circulation, and access management concepts.</p>
TAC/PAC Meeting #3	January 7, 2010/ Pendleton – Convention Center	<ul style="list-style-type: none"> <li>- Review Concepts Analysis</li> <li>- Screen Concepts</li> </ul> <p>The purpose of Meeting #3 was to review the Concepts Analysis and determine the concepts that would move forward for refined analysis.</p>
Public Workshop #2	January 7, 2010/ Pendleton – Convention Center	<ul style="list-style-type: none"> <li>- Review Concepts Analysis</li> </ul> <p>The purpose of the second public workshop was to present the concepts being considered, the results of the concepts analysis, and provide the public with the opportunity to give their feedback on the concepts being considered.</p>
TAC/PAC Meeting #4	February 18, 2010/ Pendleton – Convention Center	<ul style="list-style-type: none"> <li>- Review Evaluation of Refined Concepts</li> <li>- Determine Preferred Concepts</li> </ul> <p>The purpose of Meeting #4 was to review the evaluation of the refined concepts developed at the last set of PAC, TAC, and public workshops and determine preferred concepts. Feedback from this meeting resulted in further refined concepts for detailed analysis.</p>
City Council/Planning Commission Joint Presentation	March 30, 2010/ Pendleton – City Hall	<ul style="list-style-type: none"> <li>- Review Project Purpose and Process</li> <li>- Review Refined Concepts</li> </ul> <p>The purpose of the joint presentation was to update the City Council and Planning Commission on the project's purpose, process, and progress to date and to present the concepts that had been moved forward for further analysis.</p>

Meeting Event	Date/Location	Meeting Purpose/Objectives
TAC/PAC Meeting #5	March 31, 2010/ Pendleton – Convention Center	- Review Detailed Analyses and Cost Estimates - Determine Preferred Concepts The purpose of Meeting #5 was to review the evaluation of the refined concepts and determine preferred concepts. Feedback from this meeting resulted in new and refined concepts to be further evaluated.
TAC/PAC Meeting #6	April 15, 2010/ Pendleton – Vert Club Room	- Review Detailed Analyses and Cost Estimates - Gather Feedback The purpose of Meeting #6 was to review the evaluation of the refined and new concepts and gather feedback on them. These meetings provided direction for additional refinement and information gathering on the potential concepts.
TAC/PAC Meeting #7	May 6, 2010/ Pendleton – Vert Club Room	- Review Refined Analyses and Cost Estimates - Gather feedback The purpose of Meeting #7 was to review the evaluation of the refined and new concepts and gather feedback on them. Feedback from the meetings indicated that preferred concepts that can be supported by both committees and area business and property owners may exist.
TAC/PAC Meeting #8	July 22, 2010/ Pendleton – City Council Chambers	- Summary of Draft IAMP The purpose of Meeting #8 was to review the draft IAMP.
Public Workshop #3	July 22, 2010/ Pendleton – City Council Chambers	- Summary of Draft IAMP The purpose of the third Public Workshop was to review the draft IAMP.
Planning Commission Hearing	October 21, 2010/ Pendleton – City Council Chambers	The Draft IAMP was presented to the Planning Commission for adoption. The public hearing was continued until all members of the Commission had reviewed the document thoroughly.
Planning Commission Hearing	November 4, 2010/ Pendleton – City Council Chambers	The Draft IAMP was approved and forwarded to the City Council with a recommendation for approval.
City Council Hearing	TBD	
OTC Hearing	TBD	

**Section 3**  
Plan and Policy Review

## Plan and Policy Review

One of the project objectives of the IAMP is to ensure that the plan is consistent with local and state transportation policies and standards. To meet this objective, a review and evaluation of existing plans, policies, standards, and laws that are relevant to the IMSA was conducted. A summary of the documents reviewed is provided below. Detailed information from this review can be found in the Technical Appendix.

### DOCUMENTS REVIEWED

The following transportation and land use plans were reviewed for policies and regulations applicable to the I-84/US 395 Interchange.

#### Federal

- CFR 23 Subchapter G – Section 625 (Interstate System Access)

#### State/ODOT

- Statewide Planning Goal 1 (Public Involvement), Goal 2 (Land Use Planning), Goal 5 (Natural Resources, Scenic and Historic Areas, and Open Spaces), Goal 6 (Air, Water and Land Resources Quality), Goal 7 (Areas Subject to Natural Hazards), Goal 8 (Recreational Needs), Goal 9 (Economic Development), Goal 10 (Housing), Goal 12 (Transportation), and Goal 14 (Urbanization)
- Oregon Transportation Plan (1992)
- Oregon Highway Plan (1999)
- Oregon Administrative Rule 660, Division 12 (Transportation Planning Rule)
- Oregon Administrative Rule 734, Division 51 (Access Management Rule)
- Highway Design Manual

#### Local

- City of Pendleton Comprehensive Plan (1983)
- City of Pendleton Development Code (Last amended 2009)
- City of Pendleton Transportation System Plan (Updated 2007)
- City of Pendleton System Development Charges
- City of Pendleton Capital Improvement Program (CIP)
- Pendleton Downtown Resource Team Report (2006)

---

## **CONSISTENCY WITH EXISTING PLANS**

The IAMP has been developed to be consistent with local and state transportation policies. The review of local policies and regulations did not reveal conflicts with the primary goal of the IAMP to protect the function of the interchange but, at the same time, the existing regulatory tools also do not adequately address the future transportation needs in the area. Additional requirements regarding access management, local street connectivity, and transportation financing must be adopted if the transportation system in this area of Pendleton is going to support future planned growth. See Sections 7 and 8 for proposed amendments to existing plans required to make existing plans consistent with the IAMP.

**Section 4**  
Existing Transportation /  
Land Use Conditions

## Existing Transportation/Land Use Conditions

This section provides a review of existing land uses and transportation facilities as well as natural and cultural resources within the vicinity of the I-84/US 395 interchange. As shown in Figure 4-1, this interchange is the one of the five interchanges serving Pendleton that is central to the urban core of the city. The information identified in this section provides a basis for identifying opportunities and constraints for meeting the goals and objectives of the IAMP.

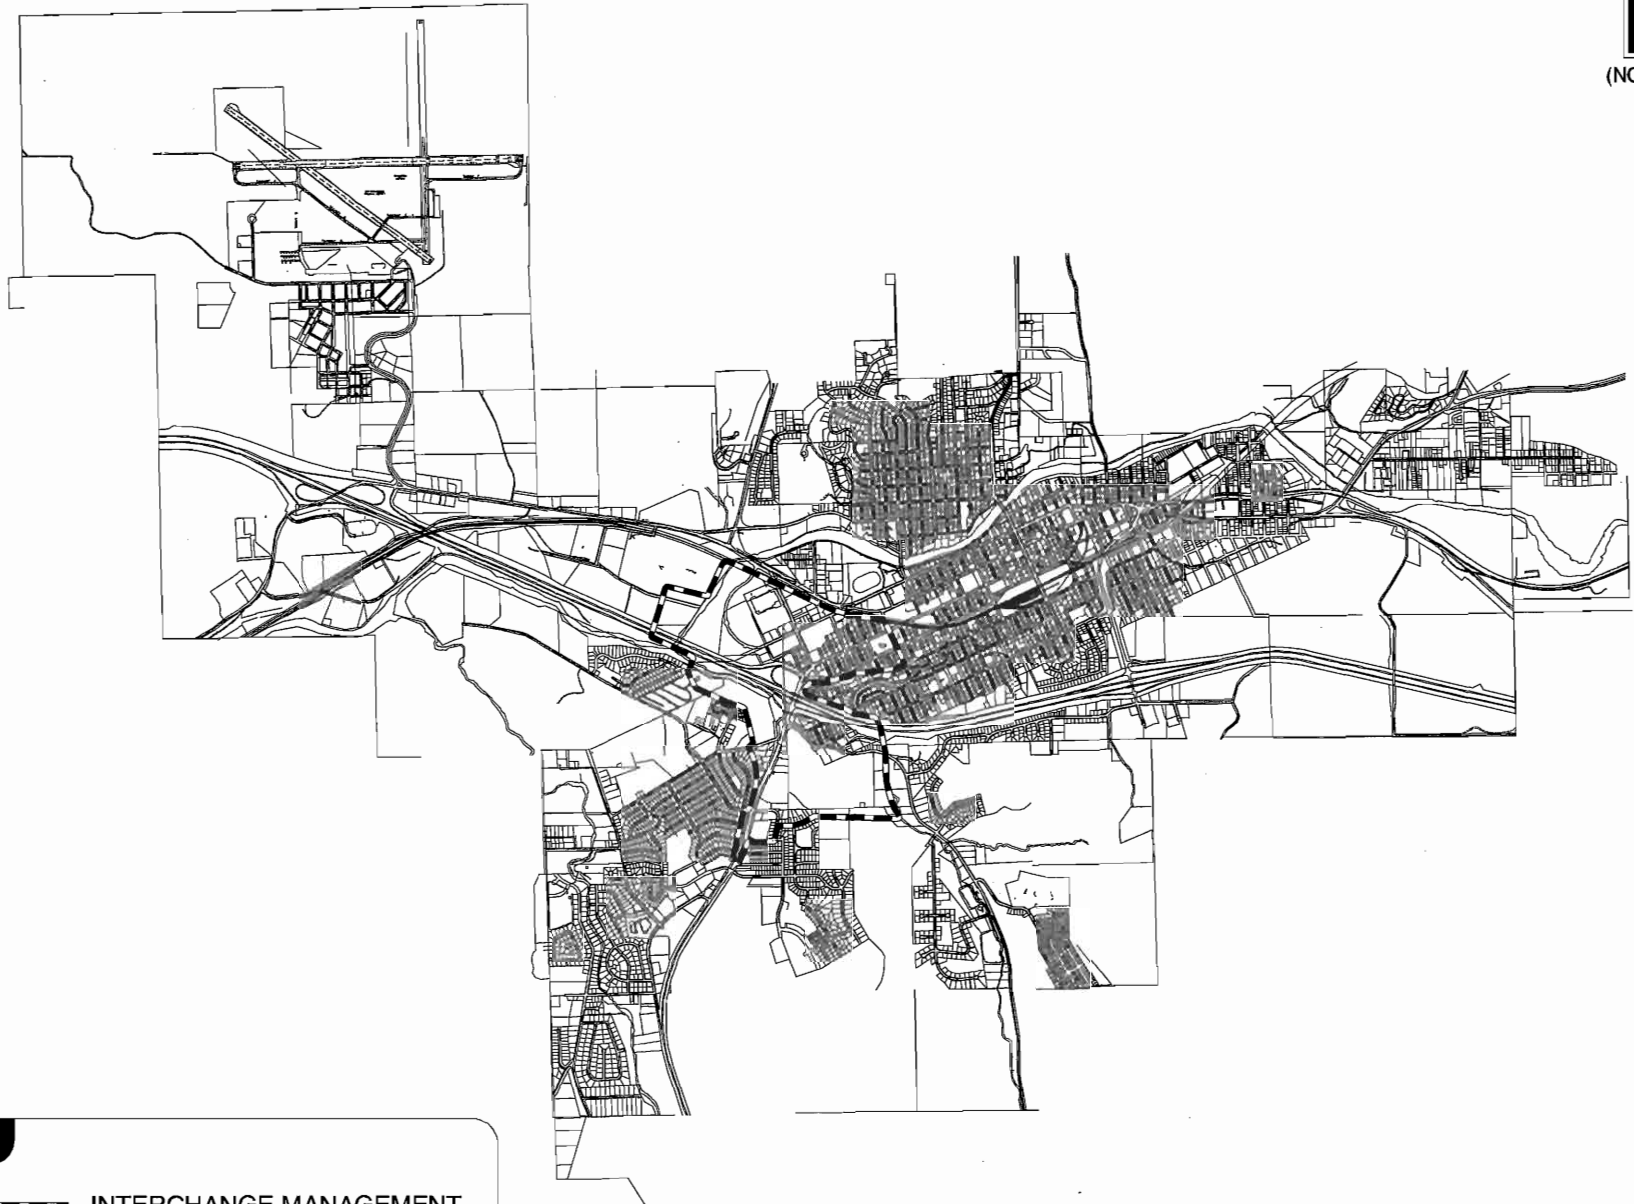

### **INTERCHANGE MANAGEMENT STUDY AREA**

The Interchange Management Study Area (IMSA), depicted in Figure 4-2, defines the extent of the land use and traffic operations review. As the figure shows, the study includes an Operations and Access Study Area and a Land Use Study Area. The Land Use Study Area includes the areas with trip generation potential that are expected to have a direct affect on the design and function of the interchange. Generally speaking, land uses outside of the Land Use Study area are not anticipated to directly impact the function of the interchange because they are already developed, have limited redevelopment potential, are already accounted for in forecasted citywide growth, or are outside of Pendleton's Urban Growth Boundary (UGB).

Figure 4-2 also outlines the Interchange Operations/Access Review Area. The operations and access management of intersections and driveways within this area is the subject of analysis described later in this section.

## EXISTING LAND USE

Pursuant to the requirements stated in the Oregon Administrative Rule 734-051-0155 for the preparation of an IAMP, a land use inventory was prepared for the IMSA. This section provides a description of the existing land-use patterns and zoning regulations that currently exist within the IMSA.

### ***Existing Zoning***

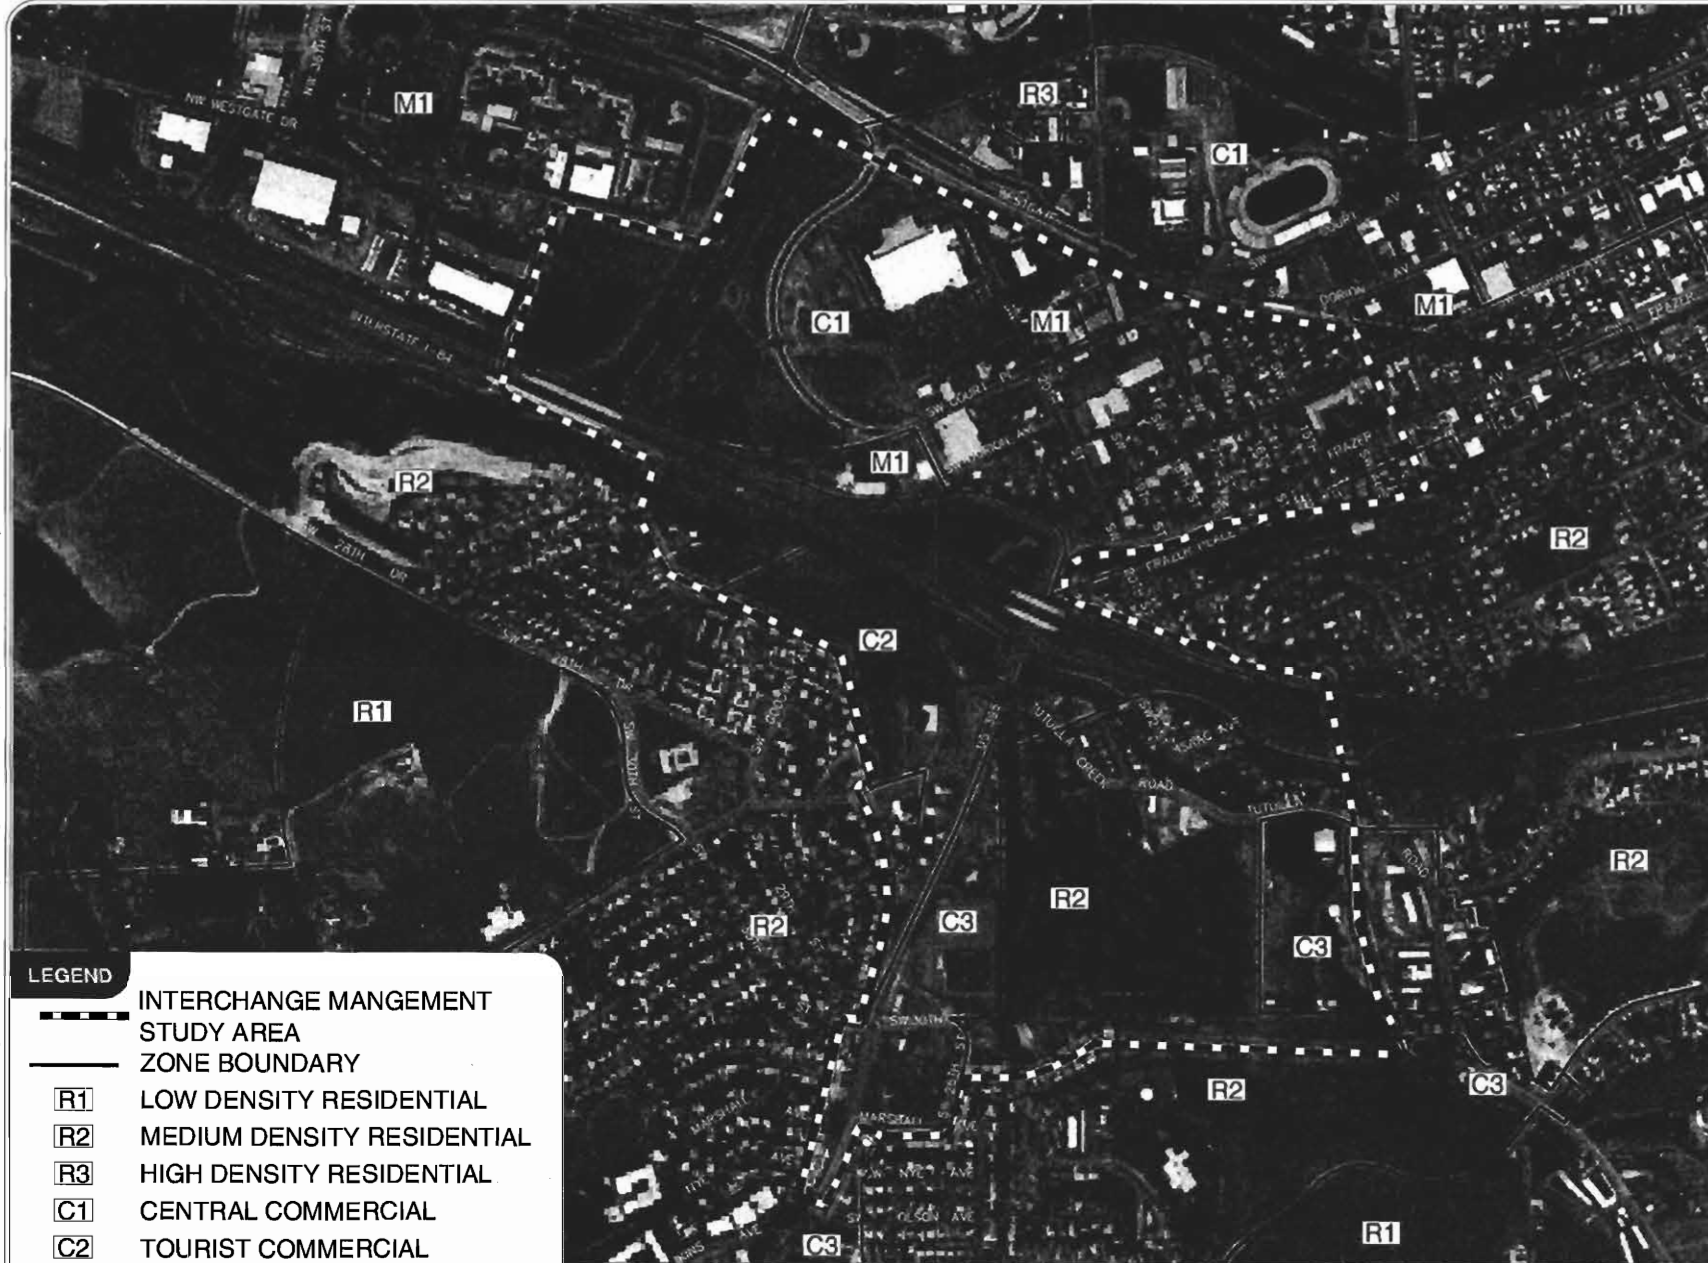

As shown in Figure 4-3, zoning in the IMSA primarily consists of commercial zones and secondarily of residential and industrial zones. Articles IV through IX of the City of Pendleton Zoning Ordinance establish permitted uses and development standards for residential, commercial, and industrial zones. Below is an overview of these provisions for the zoning districts within the IMSA.

- C-1 (Central Commercial)
  - Uses: vehicle services, business and personal services, housing (subject to conditions), eating and drinking establishments, general retail, public and health services, parking areas, garages, and transit facilities permitted outright; city parks, housing in the Central Parking District (subject to conditions), hospitals, cultural facilities, and transportation services permitted conditionally.
  - Development standards: no minimum lot size, maximum lot coverage, or maximum height.
- C-2 (Tourist Commercial)
  - Uses: eating and drinking establishments, lodging, vehicle services, and information centers permitted outright; transit facilities and transportation services permitted conditionally.
  - Development standards: no minimum lot size or maximum lot coverage; maximum building height is 50 feet or five stories.
- C-3 (Service Commercial)
  - Uses: vehicle services, business and personal services, housing (subject to conditions), eating establishments, food stores, general retail, health services, and transit facilities permitted outright; drinking establishments, housing (subject to conditions), public services, hospitals, lodging, cultural facilities, warehousing, railroad facilities, and transportation services permitted conditionally.
  - Development standards: no minimum lot size or maximum lot coverage; maximum building height is 50 feet or five stories.

H:\profile\9627 - I-84 US 395 IAMP\dwgs\figs\9627\_fig-01.dwg Aug 16, 2010 - 4:22pm - jsommerville Layout Tab: Fig\_4-3

**EXISTING ZONING CLASSIFICATIONS  
PENDLETON, OREGON**

FIGURE  
**4-3**

- R-2 (Medium Density Residential)
  - Uses: detached and attached single-family housing, duplexes, townhouses, manufactured homes, residential homes and facilities, and city parks permitted outright; multi-family housing, neighborhood commercial uses, schools, churches, cemeteries, and transportation facilities permitted conditionally.
  - Development standards: minimum lot sizes range from 5,000 to 8,000 square feet depending on slope; 5 to 18 units per acre permitted; maximum lot coverage is 40%; maximum building height is 40 feet or three stories.
- M-1 (Light Industrial)
  - Uses: vehicle services, contractors and construction retail, light industrial, business services, repair services, wholesaling, solid waste transfer stations (subject to conditions), and transportation services and facilities permitted outright; eating and drinking establishments, public services, lodging, junk and wrecking yards, light industrial, landfills and waste treatment or disposal facilities, animal clinics and hospitals, mining, utilities, and transportation equipment permitted conditionally.
  - Development standards: minimum lot size established site-by-site in Zoning Ordinance but minimum lot sizes not identified in IMSA; no maximum lot coverage; landscaping required for screening.

## **LAND USE INVENTORY**

The following is a summary of existing land uses within the IMSA, including commercial, residential, and other uses north and south of the interchange.

### Commercial Uses (North of the Interchange)

Zoning north of the interchange in the IMSA is mostly C-1 (Central Commercial). Existing uses in the zone include large to small retail as well as residential. As mentioned in the zoning section above, housing is allowed in the C-1 (Central Commercial) zone given adequate public facilities and services and conformance with other city requirements. Immediately north/northeast of the interchange between SW 20th Street and SW 23rd Street are a mini-mart, bank, furniture store, a shopping plaza, and housing, primarily single-family. Directly north of the interchange loop ramp, south/southwest of SW 20th Street is housing and a Safeway store. West/southwest of Safeway is a glass business with a storage yard and a hotel. Across SW Court Avenue from Safeway is a Wal-Mart store, with access onto SW Court Avenue and SW 20th Street. Beyond SW 23rd Street to the northern border of the IMSA is a combination of downtown businesses, services, and housing. The railroad forms the northern border, and the Round-Up Grounds and Convention Center lay just on the other side of the border.

### Commercial Uses (South of the Interchange)

Unlike the commercial development north of the interchange, which reflects the city's transition to downtown, the development in the C-2 (Tourist Commercial) zone south of the interchange reflects this area's orientation to the freeway and is comprised of fast, convenient, and motor vehicle-

oriented businesses. Immediately south of the interchange along US 395, SW Hailey Avenue, and SW Tutuilla Creek Road are a Burger King, Denny's, and motel.

Commercial zoning lines US 395 as it travels south from the interchange. Between the SW Hailey Ave/SW Tutuilla Creek Rd intersection and SW 30th Street are a series of retail businesses and professional services including a gas station, oil change shop, car wash, Wendy's, McDonald's, Subway, Starbucks, Abby's Pizza, a mini-mart, and two realtors. There is also a retailer on a large lot – D&B – a farm store that took over the building and property from K-Mart.

#### Residential Uses (North of the Interchange)

There are areas of residential zoning and housing in the IMSA. The IAMP process and the preferred transportation improvement plan for the IAMP and interchange-related transportation improvements need to be sensitive to existing residential areas. The homes in the IMSA tend to be "stick-built" and "site-built" and not mobile or manufactured homes, according to City staff, even though mobile homes are allowed in the C-1 and R-2 zones.

As noted earlier, housing is allowed in the C-1 (Central Commercial) zone and existing housing is found interspersed with commercial uses north of the interchange. In particular, there is a large block of housing between the northern interchange loop ramp and SW 20th Street, across from the Safeway. There is also housing in the R-2 (Medium Density Residential) zone in the northeast quadrant of the interchange. This area's direct impact on future interchange operations is assumed to be minimal because of the lack of developable land, the grade differences, and lack of direct access to US 395. While traffic from this area will be included in the transportation analysis, this area is not included in the IMSA for purposes of land use analysis or access management.

#### Residential Uses (South of the Interchange)

Housing south of the interchange is located in the only residential zoning district within the IMSA, the R-2 (Medium Density Residential) zone. There is an area of housing adjacent to the freeway and east of the Denny's and motel on SW Tutuilla Creek Road. There is also a large area of residentially zoned land (R-2) in this southeast quadrant of the interchange and IMSA that is vacant. This area is included in the IMSA because planned roads shown in the City's Transportation System Plan (TSP) will connect SW Ladow Avenue and SW Tutuilla Creek Road. This will create another connection between SW Tutuilla Creek Road and US 395. There are large developed neighborhoods southwest of the interchange, but as with the areas north of the interchange, these neighborhoods have not been included in the IMSA because of grade differences and only indirect access to US 395 and the interchange. Traffic from these and other areas of the city, however, will be captured in transportation analyses conducted over the course of this project through regional growth projections.

#### Other Uses

Other uses and features in the IMSA include industrial uses, institutional uses, open space, the Umatilla River and Tutuilla Creek. Light industrial uses are found in the IMSA in areas of light industrial (M-1) zoning. For example, the M-1 zone directly to the northwest of the westbound I-84 loop ramp is the site for a glass business, which also uses the site for storage. A larger area of M-1

zoning is found in the IMSA west of the Umatilla River, adjacent to and north of the freeway. This area was included in the IMSA because of planned roadways across the river shown in the City's TSP. This industrially zoned land is currently vacant and owned by the City. North of it is the Eastern Oregon Correctional Institution, a 1,600-bed facility and the city's fourth largest employer, according to the Oregon Department of Corrections.

Institutional uses in the IMSA include a church, cemetery, and a US Forest Service (USFS) building, all to the south of the interchange. The USFS building that is directly south of the eastbound I-84 off-ramp and the Burger King is the headquarters for the Umatilla National Forest. This land is not owned by the USFS or federal government. Olney Cemetery occupies a large area southeast of the interchange. The 55-acre site and associated facilities are owned and managed by the City and its Parks Department. According to the City's website, of the 70,000 available graves, 17,000 people have thus far been interred there, including transfers from a former pioneer cemetery.

On the west side of US 395, there are two churches across SW Hailey Avenue from each other. Only the church on the south side of SW Hailey Avenue (behind the realtor office, gas station, and Starbucks) has access to US 395 and is included in the IMSA. At the south tip of the IMSA and directly south of SW 30th Street is a medical center. City staff report that it functions as a regional facility, drawing visitors and patients from outside the city and not just inside the city.

#### Vacant Land

The most significant areas of vacant land in the IMSA are found north of the interchange west of the Wal-Mart and then across the Umatilla River on the City-owned property south of the Eastern Oregon Correctional Institution. These areas are zoned C-1 (Central Commercial) and M-1 (Light Industrial) respectively. The land west of Wal-Mart in particular has the potential to generate traffic given its commercial zoning and existing roads and infrastructure in the area. The City-owned land across the river is planned to be accessible via a new bridge and roads shown in the City's TSP, but these are long-term projects, so this land can be considered developable but later in a 20-year planning horizon.

South of the interchange, there is land in the southeast section of the IMSA that is vacant residentially zoned land. The land was included in the IMSA because of planned roads and connections to SW Ladow Avenue and SW Tutuilla Creek Road, which connect to US 395. Development here would likely occur later in the planning period, given the need to first, or concurrently, build these connecting roads. Residential development is assumed for future land use scenarios.

There is also vacant land included in the IMSA that is residentially zoned and is adjacent to the freeway and interchange in its southwest quadrant. This land is steeply sloped and less likely to be developed any time soon, if at all. If developed, this area would likely be homes rather than employment (commercial or industrial) uses. The area is not well suited to employment uses, which tend to seek flatter land and might conflict with adjacent residential neighborhoods.

City staff identified the potential for infill development amongst existing commercial development along US 395 south of the interchange. However, there has been no recent indication of private interest.

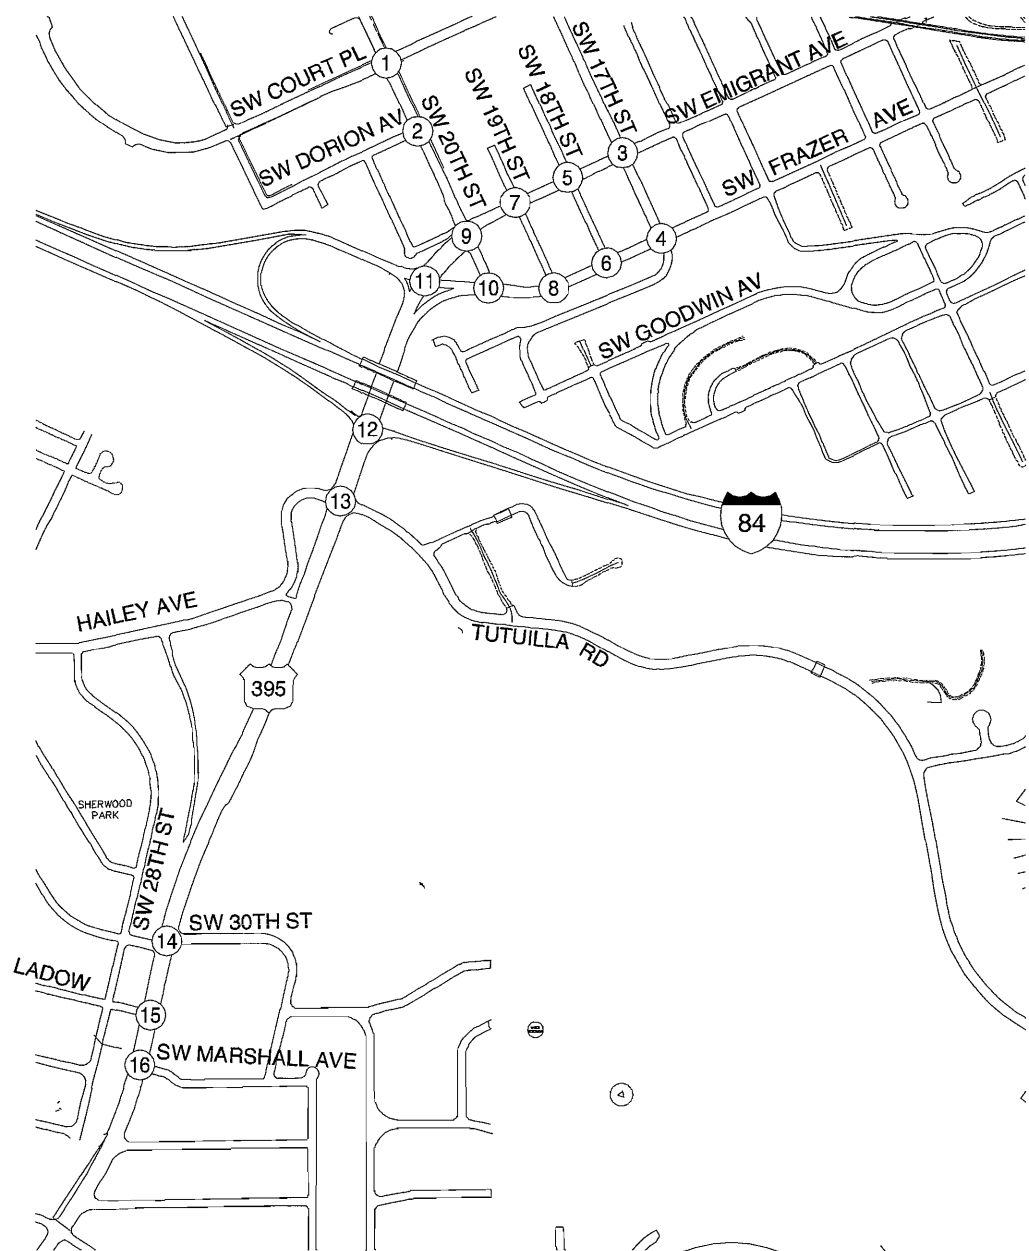

Despite the vacant land and development opportunities documented here, City planning staff report that there were no submitted or pending development applications in the IMSA at the time that the IAMP was developed, nor had there been informal inquiries or conversations with staff about development in the vicinity of the interchange.

## **EXISTING TRANSPORTATION INVENTORY**

The second major component of the I-84/US 395 IAMP existing conditions evaluation process is the transportation system. The existing transportation inventory provides a detailed description of all transportation facilities and travel modes within the IMSA. In addition, the inventory identifies the current operational, traffic control, and geometric characteristics of roadways and other transportation facilities.

### **ROADWAY FACILITIES**

The roadways within the IMSA include state and city roadways. A description of each of the functionally classified roadway facilities is summarized in Table 4-1. The remaining roadways (e.g. SW 19<sup>th</sup> Street, SW 18<sup>th</sup> Street, etc...) are classified as local roads and typically are 25 mph, two-lane sections with sidewalks and on-street parking but no bike lanes. Figure 4-4 illustrates the existing lane configurations and traffic control devices at the respective study intersections.

<sup>1</sup>Functional classifications of ODOT roadways are from the 1999 Oregon Highway Plan and classifications of City roadways are from the Oregon Transportation Map for Pendleton, drawn by ODOT

<sup>2</sup>SW 17<sup>th</sup> Street is classified as a minor arterial northwest of SW Frazer Avenue and a local road to the southeast

<sup>3</sup>SW 20<sup>th</sup> Street is classified as a minor arterial northwest of SW Emigrant Avenue and a local road to the southeast

<sup>4</sup>SW 30<sup>th</sup> Street is classified as an urban collector west of US 395 and a local road to the east

<sup>5</sup>Local Streets include SW 19<sup>th</sup> Street, SW 18<sup>th</sup> Street, SW Dorion Avenue, SW Court Place, SW Ladow Avenue, SW Nye Avenue, SW Olson Avenue, and SW Perkins Avenue

#### Interstate-84

I-84 is a four-lane interstate highway that runs east-west through Pendleton. It is the main east-west travel route within the state of Oregon providing a connection between Portland, Oregon and Boise, Idaho. I-84 is part of the National Highway System and is designated in the 1999 Oregon Highway Plan (Reference 1) as an Interstate Highway, Freight Route, and Truck Route.

#### Interstate-84 Ramps

The eastbound ramps are a diamond configuration. They include a single-lane on and a single-lane off the interstate in the eastbound direction between the right travel lane of I-84 and US 395. The eastbound off-ramp provides approximately 900 feet for deceleration and queue storage from the ramp gore to the ramp terminal intersection. Its intersection with US 395 is signalized and there is approximately 100 feet of storage for the added eastbound right-turn lane.

The westbound ramps consist of an exiting loop ramp and a conventional on-ramp located in the northwest quadrant of the interchange. They include a single-lane on and a single-lane off the interstate in the westbound direction between the right travel lane of I-84 and US 395. The westbound off-ramp provides approximately 1,300 feet for deceleration and queue storage from the ramp gore to the ramp terminal intersection. There is approximately 400 feet of storage for the added eastbound right-turn lane from the off-ramp onto US 395.

Due to the area's topography, I-84 is elevated over US 395, which slopes downward from south to north. Consequently vehicles entering I-84 must travel up a grade while accelerating to merge onto I-84. Exhibit 4-1 shows the eastbound on-ramp.

**Exhibit 4-1 Eastbound I-84 On-Ramp from US 395**

The partial cloverleaf configuration of the westbound ramps allows for their intersection with US 395 to be spaced further away from I-84 than the eastbound ramps. There is approximately 650 feet between the ramp terminal intersections on US 395. This allows for nearly 300 feet of storage for left-turning vehicles between the ramp terminals. There is approximately 250 feet between the westbound ramp terminal and the SW Emigrant Avenue/SW 20<sup>th</sup> Street intersection. This spacing can be used exclusively for northbound left-turn storage at the SW 20<sup>th</sup> Street intersection because there is no southbound left-turn at the ramp terminal.

#### US 395 (Southgate)

US 395, the Pendleton-John Day Highway, is classified by the Oregon Highway Plan as a Statewide Highway. It travels north-south across the state of Oregon from Washington to California through cities such as Lakeview, John Day, Pendleton, and Hermiston. Locally, it is known as Southgate from I-84 to the south city limits. US 395 proceeds to become the SW Emigrant Avenue-SW Frazer Avenue couplet, northeast of I-84. Within the IMSA, it has signalized intersections at the eastbound I-84 ramp terminals, SW Hailey Ave-SW Tutuilla Creek Road, SW 30<sup>th</sup> Street, and SW Perkins

Avenue. The Southgate corridor is primarily occupied by commercial uses, with highway-oriented uses near the interchange. It is also a major commuter route providing one of the few north-south connections across the interstate between downtown Pendleton and the southern residential areas.

#### SW Emigrant Avenue-SW Frazer Avenue (OR 37) Couplet

The SW Emigrant Avenue-SW Frazer Avenue couplet is also OR 37 from its junction with US 395 to SW 17<sup>th</sup> Street. OR 37 is classified as a District Highway by the Oregon Highway Plan and is not a National Highway System (NHS) route. The couplet provides access to downtown Pendleton business and residences. SW Emigrant Avenue (one-way southwestbound) is primarily fronted by commercial uses and SW Frazer Avenue (one-way northeastbound) is primarily accessed by residential uses within the IMSA. Both roadways have two-lane sections with sidewalks and bicycle lanes.

#### SW 17<sup>th</sup> Street (OR 37)

SW 17<sup>th</sup> Street is also OR 37 from the SW Emigrant Avenue-SW Frazer Avenue couplet to SW Court Avenue. This section of OR 37 is classified as a district highway by the Oregon Highway Plan and is not a National Highway System (NHS) route. SW 17<sup>th</sup> Street is a minor arterial and provides a connection from the SW Emigrant Avenue-SW Frazer Avenue couplet to the SW Dorion Avenue-SW Court Avenue couplet, as well as West Gate Avenue (US 30), which travels west across the Umatilla River and provides access to the Eastern Oregon Correctional Institution, Blue Mountain Community College, and Eastern Oregon Regional Airport.

#### SW 20<sup>th</sup> Street

SW 20<sup>th</sup> Street is a three-lane City roadway. It connects the SW Emigrant Avenue-SW Frazer Avenue couplet to SW Court Place, a relatively newer roadway that has more recently experienced new large-scale retail and hotel development.

#### SW Tutuilla Creek Road

SW Tutuilla Creek Road is a two-lane minor arterial with sidewalks and bike lanes along most of the roadway within the IMSA. It provides access to the City's cemetery and residential and industrial areas in the southeast portion of Pendleton. The road extends much further out into rural county land. It also provides connections to other roadways (SW Marshall Ave-SW Nye Ave) that access the easternmost I-84 interchange in Pendleton.

#### SW Hailey Avenue

SW Hailey Avenue is a two-lane urban collector with sidewalks. It provides access into residential areas in southwest Pendleton. It also connects to SW 37<sup>th</sup> Street, which provides access to Pendleton Community Park.

#### SW 30<sup>th</sup> Street

SW 30<sup>th</sup> Street is a two-lane urban collector to the west of US 395. It provides access to residential areas and connects to SW Hailey Avenue. SW 30<sup>th</sup> Street terminates just to the east of US 395, where it functions as a local road.

---

## Local Streets

SW 19th Street, SW 18th Street, SW Dorion Avenue, SW Court Place, SW Ladow Avenue, SW Nye Avenue, SW Olson Avenue, and SW Perkins Avenue all function as local streets providing access to local properties. Most of these streets have sidewalks and allow on-street parking.

## **PUBLIC TRANSPORTATION FACILITIES**

There are no public transportation facilities that operate within the IMSA. Through a grant from ODOT, the City of Pendleton operates a demand-responsive bus service from 1:00 p.m. to 5:30 p.m. Monday through Friday. The City also contracts with local taxi service to provide transportation options for senior and disabled citizens.

## **PEDESTRIAN AND BICYCLE FACILITIES**

Sidewalks and bicycle lanes make up the exclusive pedestrian and bicycle facilities inventory in the IMSA. Sidewalks are present on nearly every functionally classified roadway within the IMSA, with the exception of I-84. Generally, pedestrian activity in the IMSA is the highest on SW Emigrant Avenue (it should be noted that pedestrian and bicycle counts were only conducted north of SW 30th Street). The SW 17th Street/SW Emigrant Avenue intersection had the highest amount of pedestrian activity, with 163 pedestrians walking through the intersection from 6 a.m. to 10 p.m., with the highest hour occurring from 3:00 p.m. to 4:00 p.m. when 31 pedestrians walked through. The I-84 eastbound ramp terminals had the second highest level of pedestrian activity, with 133 pedestrians from 6:00 a.m. to 10 p.m. Pedestrian activity was the lowest along SW Frazer Avenue, most notably at the SW 18th and 19th Street intersections.

Bicycle lanes are present on many of the classified roadways. US 395 and the SW Emigrant Avenue-SW Frazer Avenue couplet have bicycle lanes, thereby providing a route from the southwestern portion of Pendleton into the downtown core. The highest bicycle volumes were observed at the SW 17th Street intersections of the SW Emigrant Avenue-SW Frazer Avenue couplet (15 and 13 bicycles during the 16-hour period described above, respectively), followed by the SW 20th Street intersections of the couplet, as well as SW Dorion Avenue (16-hour volumes ranged from 11 to 13 bicycles). On this note, bicycle lanes are noticeably absent from SW 20th Street, which provides a connection to SW Court Place and West Gate Avenue (US 30).

## **EXISTING TRAFFIC VOLUMES AND PEAK HOUR OPERATIONS**

Manual intersection turning movement counts were obtained from ODOT at each of the study intersections to assess the operational performance and characteristics within the IMSA. These counts were conducted on mid-week days in April 2007 and May 2009. A description of the analysis conducted with this data is summarized in the following sections.

### **Peak Hour Intersection Volumes**

Turning movement counts at each intersection were recorded from 6:00 a.m. to 10:00 p.m. Because of the close proximity of the intersections, a system-wide peak hour is identified based on the volumes at all study intersections. The weekday p.m. peak hour in the IMSA is from 4:30–5:30 p.m. The turning movement volumes at each study intersection are balanced during this hour to account

for the differences in data collection dates and locations where some data is missing. Exhibit 4-2 through Exhibit 4-4 illustrate the daily volume peaking characteristics of the I-84 ramp and through traffic. Exhibit 4-5 illustrates the daily volume peaking characteristics of US 395 south of I-84.

**Exhibit 4-2 Daily Traffic Volume Profile for I-84 Westbound Ramps at US 395**

**Exhibit 4-3 Daily Traffic Volume Profile for I-84 Eastbound Ramps at US 395**

**Exhibit 4-4 Daily Traffic Volume Profile for I-84 West of US 395**

**Exhibit 4-5 Daily Traffic Volume Profile on US 395 South of I-84**

### Seasonal Adjustments

Following the methodology outlined by ODOT’s Analysis Procedures Manual (Reference 2), a seasonal adjustment factor was applied to the traffic counts collected for the existing conditions analysis in order to estimate 30th highest hour volumes. The counts were collected in April and May, so seasonal adjustment factors were calculated for both months. I-84 and US 395 exhibit different characteristics so separate factors were calculated for each roadway. The seasonal adjustment factor for I-84 volumes is calculated from ODOT automatic traffic recorder (ATR) #30-004, which is located on I-84, approximately 6.20 miles west of US 395. Meanwhile, the seasonal adjustment factor for US 395 and other roads in Pendleton is based on data from ATR #30-008, which is located on US 395, approximately 0.09 miles south of I-84. The factors for I-84 for April and May are 1.17 and 1.13, respectively and they are 1.01 for both months on US 395. The factor is much smaller on US 395 since its traffic is mostly local commuter traffic. This traffic pattern minimizes the seasonal fluctuations when compared to I-84, which sees a substantial amount of summertime recreational travel. The weekday 30<sup>th</sup> highest hour intersection turning movement counts used for the existing conditions analysis are shown in Figure 4-5.

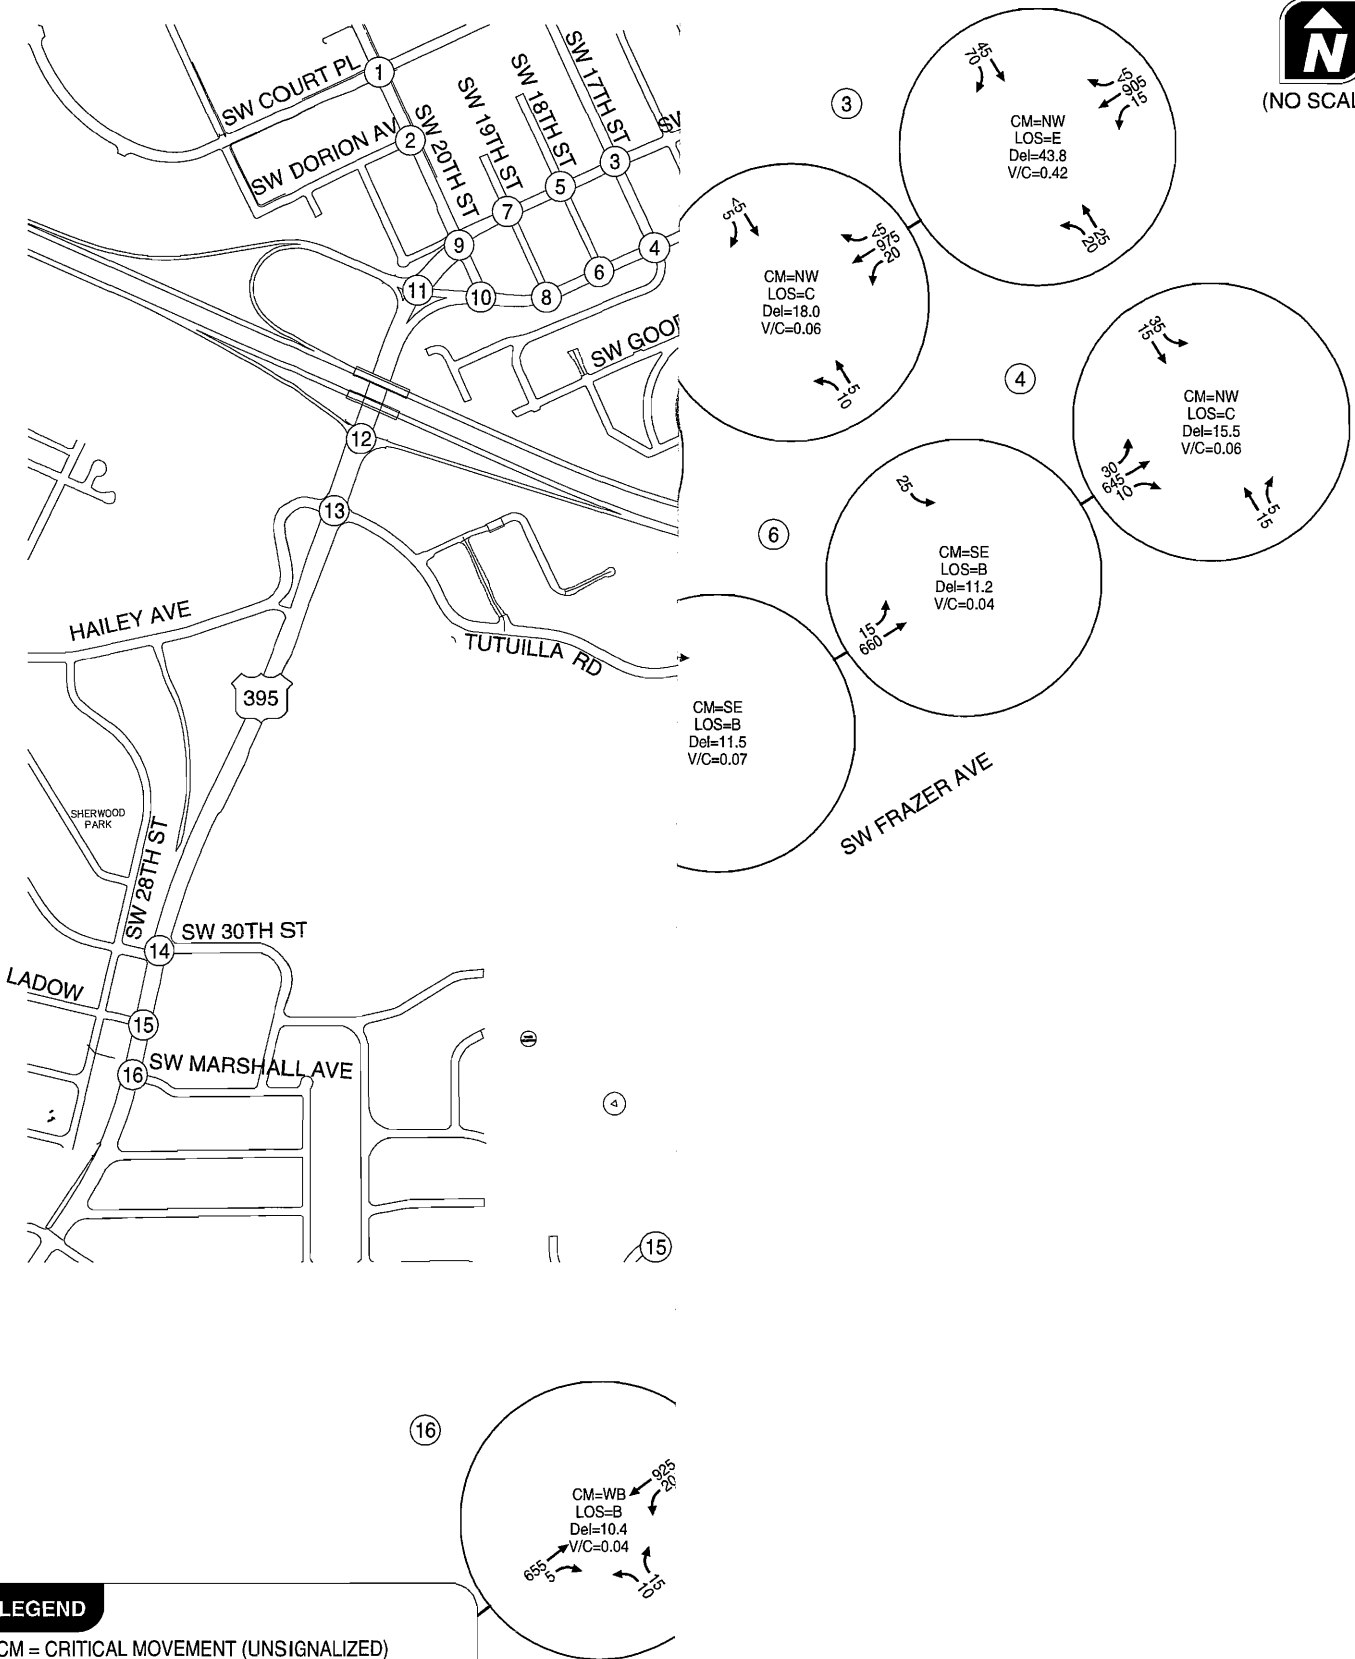

### Existing Intersection Operations

All level of service analyses described in this analysis was performed in accordance with the procedures stated in the 2000 *Highway Capacity Manual* (Reference 3). The OHP sets operational standards based on volume-to-capacity (v/c) ratios for the interchange ramp terminals (v/c of 0.80), intersections of US 395 (v/c of 0.85), and OR 37 (v/c of 0.90). These standards apply to the overall v/c ratio at the signalized intersections and to the state highway approaches at unsignalized intersections. The minor street approaches that are stop-controlled at signalized intersections have a standard of a v/c ratio of 0.90. The operational standard for all other study intersections is the City

(NO SCALE)

**LEGEND**

- CM = CRITICAL MOVEMENT (UNSIGNALIZED)

- V/C = CRITICAL VOLUME-TO-CAPACITY RATIO

**EXISTING 30TH HOUR TRAFFIC CONDITIONS  
PENDLETON, OREGON**

**FIGURE  
4-5**

H:\profiles\luc... I-84 US 395 (AMP)\Dwgs\Figs\9627\_fig-01.dwg Nov 05, 2010 - 4:18pm - nfoster Layout Tab: Fig. 3-3

standard of LOS "D." As shown in Figure 4-5, currently meet applicable operation standards. The existing conditions operations worksheets are provided in the Technical Appendix. While overall intersection standards are met, there are certain movements that operate without sufficient capacity and with excessive delay. These intersections are described below.

#### SW 20th Street/SW Emigrant Avenue (I-84 WB Ramp Terminal)

This intersection has a v/c ratio of 0.83, which meets the ODOT standard of 0.90 for this intersection. However, the northbound left-turn and the southbound through movement on SW Emigrant Avenue operate with v/c ratios greater than 1.0 and LOS "F." The lack of capacity for the northbound left-turn movement is particularly problematic as it induces long queues (95<sup>th</sup>-percentile queue of greater than 475 feet) that spillback in front of the westbound I-84 off-ramp and block the left-turn/through lane from the ramp. This means that the westbound I-84 ramp terminal intersection likely operates with greater delay and less capacity than is reported in this analysis.

#### SW 20th Street/SW Court Place-Avenue

The southbound left-turn from SW 20th Street onto SW Court Avenue currently operates with a v/c ratio greater than 1.0 and at LOS "F." Currently there are 150 vehicles making this movement during the 30<sup>th</sup>-highest hour, while 390 vehicles in one lane oppose it on the opposite approach. The *Signalized Intersections: Informational Guide* published by the Federal Highway Administration (Reference 4) provides guidance that left-turn phasing (e.g. protected-permissive) should be considered when the product of the left-turning and opposing volumes exceeds 45,000 vehicles. For this approach, the product is over 58,000. Providing some sort of left-turn phasing would provide sufficient capacity at this intersection.

#### US 395/SW Hailey Avenue-SW Tutuilla Creek Road

While it does not show up as a problem when the intersection is examined in isolation, field observations of existing conditions reveal that the close spacing between the US 395/SW Hailey Avenue-SW Tutuilla Creek Road intersection and the I-84 Eastbound ramp terminal does create operational and potential safety issues. The southbound left-turn from US 395 onto SW Tutuilla Creek Road occasionally stacks back through the I-84 Eastbound ramp terminal. As this occurs more frequently, this could lead to vehicles stacking back on the I-84 Eastbound off-ramp itself.

### **TRAFFIC SAFETY**

The crash histories at key intersections were reviewed in an effort to identify potential intersection safety issues. Crash records were obtained from ODOT for the five-year period from January 1, 2003 through December 31, 2007. Table 4-2 contains the summary of reported crashes at these intersections.

**TABLE 4-2  
INTERSECTION CRASH HISTORIES (JANUARY 1, 2005 THROUGH DECEMBER 31, 2007)**

Intersection	# of Crashes	Crash Rate <sup>1</sup>	Crash Type				Severity		
			Angle	Rear-End	Turning	Other	PDO	Injury	Fatality
I-84 WB Ramps/ US 395	8	0.2	1	2	3	2	4	4	0
I-84 EB Ramps/ US 395	16	0.3	3	6	7	0	8	8	0
SW 20 <sup>th</sup> Street/SW Emigrant Avenue	11	0.3	2	3	5	1	8	3	0
SW 20 <sup>th</sup> Street/SW Frazer Avenue	2	0.1	0	0	1	1	2	0	0
SW 19 <sup>th</sup> Street/SW Emigrant Avenue	1	0.1	0	1	0	0	0	1	0
SW 19 <sup>th</sup> Street/SW Frazer Avenue	1	0.1	0	0	1	0	1	0	0
SW 18 <sup>th</sup> Street/SW Emigrant Avenue	None Reported								
SW 18 <sup>th</sup> Street/SW Frazer Avenue	None Reported								
SW 17 <sup>th</sup> Street/SW Emigrant Avenue	9	0.4	5	0	3	1	7	2	0
SW 17 <sup>th</sup> Street/SW Frazer Avenue	4	0.2	0	0	4	0	3	1	0
SW Hailey Ave-SW Tutuilla Creek Rd/ US 395	17	0.3	3	9	5	0	9	8	0
SW 30 <sup>th</sup> Street/ US 395	5	0.2	0	2	2	1 <sup>2</sup>	3	2	0

<sup>1</sup>Crash rate is expressed in terms of crashes per million entering vehicles

<sup>2</sup>Two pedestrians were struck by a vehicle and injured

The SW 17<sup>th</sup> Street/SW Emigrant Avenue intersection exhibits the highest crash rate in Table 4-2. Six of the nine reported crashes involve northwest bound vehicles leaving the stop-controlled SW 17<sup>th</sup> Avenue approach and failing to yield the right-of-way to southwest bound vehicles on uncontrolled SW Emigrant Avenue. This type of pattern is consistent with an intersection where there is a heavy uncontrolled through movement and the side street experiences moderate to high delay.

The SW Hailey Ave-SW Tutuilla Creek Rd/US 395 intersection has the highest number of crashes. Over half of these are rear-end crashes and nearly all of these occurred on US 395. This pattern is fairly typical at a signalized intersection.

The I-84 EB Ramps/US 395 intersection has the second highest number of reported crashes, but the data was collected before the signal was installed. Prior to the installation of the signal, there was a high proportion of rear-end crashes on the off-ramp. There were also two crashes at this intersection involving a bicycle traveling northeast. The addition of protected phasing for the southbound left-turn would have likely prevented one of these crashes. The installation of the right-

turn island on the northbound approach will help prevent certain types of right-turning crashes with bicyclists.

A review of the crash data at the I-84 WB Ramps/US 395 intersection reveals that the reported crashes are fairly evenly split amongst different types and movements, with none being particularly high.

### **EXISTING ROADWAY ACCESS CONDITIONS**

There are currently 98 public and private access points located within the US 395/SW Emigrant Avenue/SW Frazer Avenue Operations and Access Study Area (roughly ½ mile to the north and south of the interchange). Of these access points, 73 are located north of the interchange while the remaining 25 access points (excluding the interchange ramp terminals) are located south of the interchange. As the summary illustrates, there is a proportionally larger number of access points on the north side of the interchange. This is due to the presence the city street grid that begins immediately north of the interchange, the compounding effect of the SW Emigrant Avenue and SW Frazer Avenue couplet (which provides access opportunities on both sides of the roadways), and geography constraints which limit access on the south side of the interchange. Figures 4-6 and 4-7 illustrate the location and type (public or private) of each of the access locations within the Operations and Access Study Area. Table 4-3 summarizes the tax lots and existing businesses served by each of the access points as well as other miscellaneous descriptive information such as driveway width, mile point location, and permit number (if applicable).

Oregon Administrative Rule 734, Division 51 and the Oregon Highway Plan (OHP) identify ODOT's access management standards within the vicinity of interchanges. Based on an outright application of the standards, no full public or private access is allowed within 1,320 feet (¼ mile) from the ramp terminals. Figures 4-6 and 4-7 show the 1,320 foot access control area as measured from the Interstate-84 ramp terminal intersections. As shown, 28 private and 19 public accesses are located within the 1,320-foot control area north of the interchange. As previously noted, this proliferation of access points is related to the presence of the existing city street grid and multiple property access afforded by the roadway couplet.

On the south side of the interchange, 8 private and 5 public accesses are located within the 1,320-foot control area. Due to geography constraints, some level of access consolidation has naturally occurred which has reduced the number of private driveways. However, the presence of the signalized SW Hailey Avenue/Tutuilla Creek Road intersection located only several hundred feet south of the eastbound ramp terminal along with the existing private driveways will be an important access planning element to be explored as part of future concepts analyses.

**TABLE 4-3 EXISTING PUBLIC/PRIVATE ACCESS APPROACH INVENTORY**

Figure ID	Roadway	Approach Type	Side of Roadway	Serves Tax Lot Number	Property Owner/ Business Name	Mile Point	Approach Width/ Type	Permitted?/ Permit #	Date of Permit
1	SW Emigrant Ave	Public	West	-	SW 13th St.	1.17	32' Type C	Not Permitted	-

## **EXISTING ROADWAY DEFICIENCIES**

No significant existing roadway deficiencies were identified within the IMSA along the paved sections of roadway.

## **NATURAL AND CULTURAL RESOURCES**

Tutuilla Creek is a prominent natural feature in the IMSA, running east-west and located between the eastbound I-84 ramps, and development on the south side of I-84. It is a tributary of the Umatilla River, which is also included in the IMSA and intersects with Tutuilla Creek west of the interchange. The City has also identified that there is “good” wildlife habitat in the Tutuilla Creek corridor around US 395. Among other reasons, these natural resources are important for habitat, management of water quantity and quality, and recreation in the city. Long-term transportation plans show the River Parkway path being built along and connecting both water bodies. Most of the River Parkway has been built along the Umatilla River already. City staff has identified Tutuilla Creek as potentially salmon-bearing and Umatilla River as salmon-bearing, so one or both of the water bodies will also be subject to federal endangered species protection. The City’s Comprehensive Plan’s resource inventory does not identify any archaeological, historic, or other cultural sites in the IMSA, but it should be noted that this document was adopted in the 1980s and may not reflect current conditions or present-day community values or policies. This element of the City’s Comprehensive Plan will likely be revised as part of the City’s 2009-2013 plan update.

**Exhibit 4-6 Tutuilla Creek (east of US 395 and South of I-84)**

## **SUMMARY**

- The primary roadways within the Interchange Management Study Area (IMSA) include Interstate-84, US 395, and the SW Emigrant Avenue-SW Frazer Avenue couplet.
- All of the study intersections meet their respective ODOT mobility standard; however, specific movements at the SW 20<sup>th</sup> Street/SW Emigrant Avenue and SW 20<sup>th</sup> Street/SW Court Place intersections are over capacity. This issue is especially problematic at the SW Emigrant

Avenue intersection, where queue spillback blocks movements from the I-84 Westbound off-ramp. Queue spillback from the US 395/SW Tutuilla Creek Road-SW Hailey Avenue intersection also blocks movements from the I-84 Eastbound off-ramp.

- There are no identified safety issues within the IMSA based on a review of the most recent five years of available crash data.
- Pedestrian facilities are provided along all functionally classified roads. Bicycle lanes are also provided on the major facilities, however they are missing along SW 20<sup>th</sup> Street.
- There are currently 98 access points located within the Operations and Access Study Area (roughly ½-mile to the north and south of the interchange) along SW Emigrant Avenue, SW Frazer Avenue, and US 395. The existing access points are a combination of public and private approaches.
- ODOT's access spacing standard within the vicinity of the interchange is 1,320 feet (¼-mile) from the ramp terminals to any type of access (partial or full). Within this ¼-mile control area, 28 private access points and 19 public accesses reside on the north side of the interchange. On the south side of the interchange, 8 private access points and 5 public access points reside within the ¼ mile control area.
- Natural resources in the IMSA include Tutuilla Creek, Umatilla River, and "good" wildlife habitat in the Tutuilla Creek corridor around US 395. City staff has identified Tutuilla Creek as potentially salmon-bearing and Umatilla River as salmon-bearing, so one or both of the water bodies will also be subject to federal endangered species protection.

**Section 5**  
2030 Future Conditions

## 2030 Future Conditions

This section documents the future land use as well as the forecast traffic operations in the vicinity of the I-84/US 395 interchange. The future traffic projections are based on a travel demand model for Pendleton that is maintained by ODOT. Future land uses planned for by the City were updated in this model as a part of this project.

### YEAR 2030 NO-BUILD TRAFFIC VOLUMES FORECAST METHODOLOGY

Year 2030 “No-Build” traffic volume forecasts for intersection turning movements and street segments are based on projected growth in traffic volumes from the Pendleton travel demand model maintained by ODOT’s Transportation Planning Analysis Unit (TPAU). ODOT maintains both a base year and a future year model. The volume outputs from these models are post-processed according to the methods described in the Analysis Procedures Manual to arrive at the turning movement volumes shown in Figure 5-1.

As a part of this project, the future year model has been updated to reflect the most current land-use and transportation system plans for Pendleton. These changes are described below. More detailed information about these modifications may be found in the Technical Appendix.

#### ***Future Land Uses***

ODOT’s travel demand model for Pendleton assumes future land uses as they are planned for in the City’s Comprehensive Plan. Since this plan was last completed, the City has approved new zone changes and other development plans that require the model to be updated for this project. These changes include increasing the amount of expected future industrial employment near the airport due the rezoning of land from EFU to Light Industrial; increasing the amount of future housing assumed in the SW Tutuilla Road area due to recently approved development plans; and relocating St. Anthony’s Hospital to south of I-84, as the hospital has indicated it plans to do.

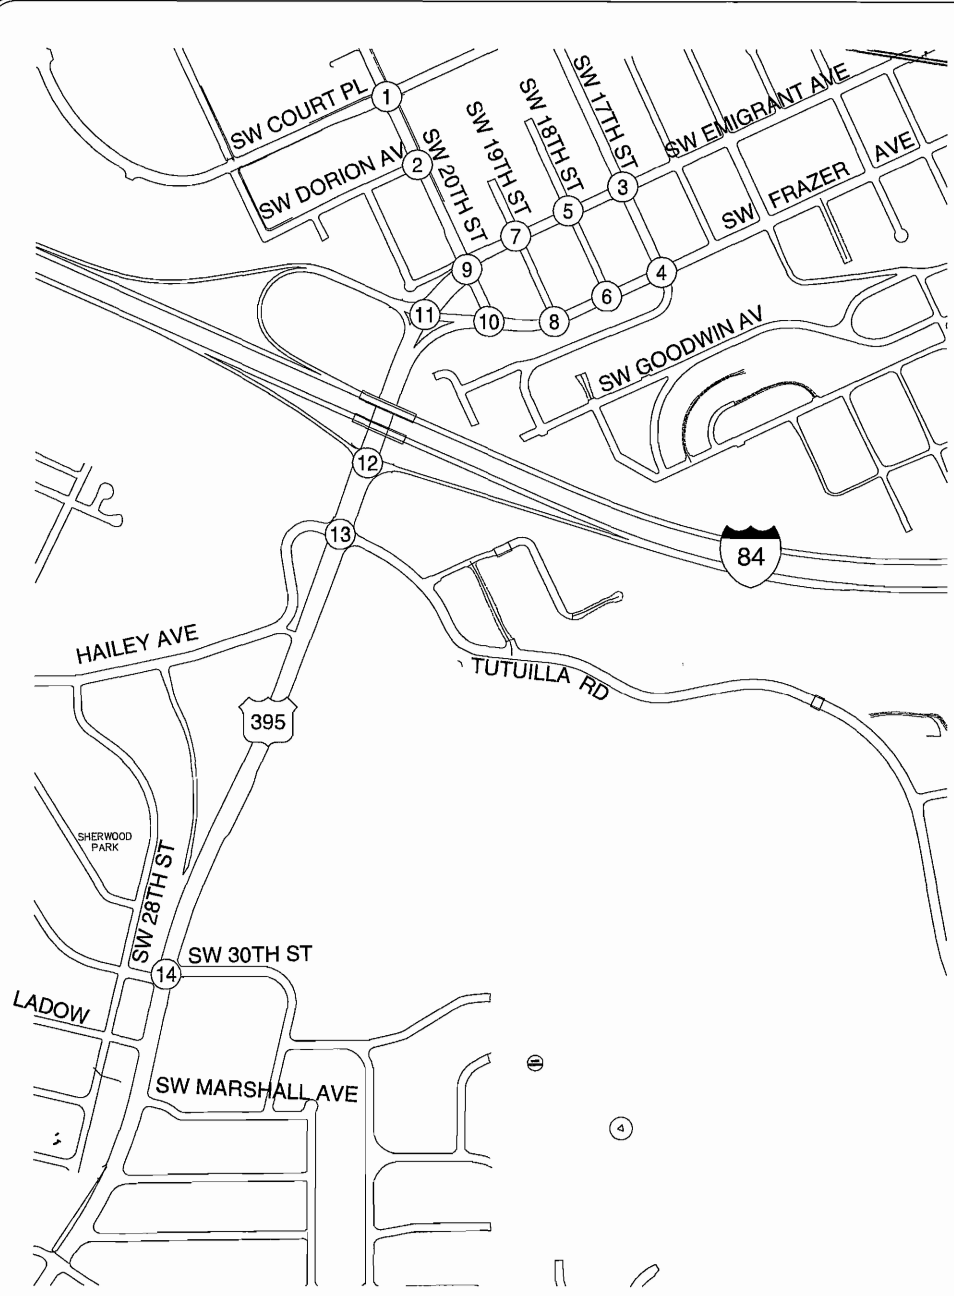

#### ***Future Roadway Network***

The future roadway network in ODOT’s travel demand model represents the network planned for in the City’s Transportation System Plan (TSP). This plan has been updated since the future model was originally created, and therefore had to be updated for this project. The City also identified roadway connections that it anticipates to be constructed by 2025 by new development. These modifications to the future roadway network include the addition of Airport Road, which has recently been constructed, and the addition of several new local street connections in the SW Tutuilla Road area, where new residential development is anticipated.

(NO SCALE)

**YEAR 2030 TRAFFIC CONDITIONS  
30TH HIGHEST HOUR  
PENDLETON, OREGON**

**FIGURE  
5-1**

H:\projects\184 US 395 IAMP\Drawings\Figs\9627\_fig-01.dwg Nov 05, 2010 - 4:20pm - nfoster Layout Tab: Figs

## **YEAR 2030 NO-BUILD TRAFFIC CONDITIONS**

The volumes shown in Figure 5-1 are used to determine the year 2030 “No Build” traffic conditions. All level of service analyses are performed in accordance with the procedures stated in the 2000 *Highway Capacity Manual*. The operational standards are the same as those described in the Existing Condition section. Figure 5-1 shows the results of this analysis.

### ***I-84 Westbound Ramp Terminal and SW 20<sup>th</sup> Street/SW Emigrant Avenue***

As shown in Figure 5-1, the I-84 Westbound ramp terminal is forecast to have a v/c ratio greater than the standard of 0.80. The eastbound left-turn/through movement from the I-84 Westbound off-ramp is forecast to operate with significant delays, which will lead to vehicles stacking up on the off-ramp. This condition will be worsened at times when the northbound left-turn at the SW 20<sup>th</sup> Street/SW Emigrant Avenue intersection backs up and blocks these movements from the I-84 Westbound off-ramp. The SW 20<sup>th</sup> Street/SW Emigrant Avenue intersection is forecast to operate with a v/c ratio right at the standard of 0.90, meaning queues will back up more frequently in front of the Westbound ramp terminal than they do today.

### ***I-84 Eastbound Ramp Terminal and US 395/SW Hailey Avenue-SW Tutuilla Creek Road***

The I-84 Eastbound ramp terminal is forecast to have a v/c ratio greater than the standard of 0.80. In addition, the US 395/SW Hailey Avenue-SW Tutuilla Creek Road intersection is forecast to have a v/c ratio greater than 1.0. Currently the southbound left-turn from US 395 onto SW Tutuilla Creek Road occasionally backs up in front of the Eastbound ramp terminal. Given that congestion will increase at this intersection, this occurrence will happen more frequently and could lead to vehicles stacking back on the I-84 Eastbound off-ramp.

**Section 6**  
Concept Development  
and Analysis

## Concept Development and Analysis

This section documents the development and evaluation of the local circulation and access concepts for the IAMP. Thirty unique concepts, plus seven options on certain concepts, were developed and taken through a thorough screening process that included input from Technical Advisory Committee (TAC), Public Advisory Committee (PAC), local property and business owners, and the public at-large. Based on results of the initial screening, a refined analysis was conducted that resulted in the identification of the preferred transportation improvement plan. The following subsections document the concepts that were evaluated and the results of the screening process.

### CONCEPT DEVELOPMENT PROCESS

The development of the initial concepts for the I-84/US 395 Interchange began with three separate design workshops. The first two workshops were held for members of the TAC and PAC committees, while the third workshop was held for interested citizens, business owners, and landowners in a public open house setting. All three workshops were held on August 26, 2009.

Within each workshop, participants were presented with an overview of the existing and future traffic demand within the Interchange Management Study Area (IMSA), the identified operational and safety deficiencies, and the applicable interchange design forms and basic design parameters. Following these presentation overviews, participants were asked to sketch their ideas for improving circulation at the interchange and within the IMSA.

After the completion of the TAC, PAC, and public workshops, the project team took all of the individual design ideas and grouped them into various interchange forms. Each group was further sorted into common and unique interchange form and local circulation concepts. Based on this process, the project team made some technical refinements to the interchange form and local circulation concepts to ensure basic design parameters and principles were being met.

Following the initial design workshops, additional concepts were developed beyond the original designs (Concepts N1-N12, S1-S9, and W1-W2). These concepts were based on feedback from members of the TAC and PAC, as well as local property and business owners and the general public. The additions included:

- Concept N11 was refined to include three options (N11a, N11b, and N11c) for the relocation of the I-84 westbound ramp terminals in order to determine which area would be the least impactful to existing and future businesses;

- Concept N13 was developed as a combination of N1 and N11a;
- Concepts S10-S13 were added with the goal of avoiding significant impacts to the Olney Cemetery; and
- Concepts S14-15 were developed to avoid the Olney cemetery and minimize impacts to existing businesses along US 395 south of I-84.

The concepts listed above were developed by members of the TAC and PAC, the general public, and the project team.

## CONCEPT SUMMARIES

The concepts developed for the I-84/US 395 Interchange can be grouped into three different geographic groups based on which side of the interchange they are located on. Thirteen concepts are located on the north side of the interchange, fifteen are on the south side, and two are to the west of the interchange. Each of the concepts and key design components are described below.

### **North Side Concepts**

The following is a description of the concepts that affect the north side of the interchange, including the I-84 Westbound ramp terminal.

#### N1

This concept, shown in Figure 6-1, aligns the SW 20<sup>th</sup> Street and US 395 travel corridors. A new I-84 WB ramp terminal/SW Emigrant Avenue intersection will be developed at the junction of these two alignments. It includes options for two different underpasses to relieve congestion at the consolidated intersection. Option A, shown in Figure 6-2, provides an underpass connecting SW Court Place directly to SW Frazer Avenue and Option B, shown in Figure 6-3, allows traffic on SW Emigrant Avenue bound for US 395 to bypass the intersection and continue southbound on US 395.

#### N2

In this concept, shown in Figure 6-4, SW Emigrant Avenue is rerouted between the I-84 WB ramp terminals and SW 20<sup>th</sup> Street. Traffic traveling from either I-84 WB or US 395 bound for SW 20<sup>th</sup> Street would enter the SW Emigrant Ave/SW 20<sup>th</sup> Street intersection at the existing southeastern SW 20<sup>th</sup> Street approach in front of Dean's Market. This converts what is a left-turning movement today into a through movement. The I-84 WB ramp terminals would also be signalized.

#### N3

Concept N3, shown in Figure 6-5, is similar to Concept N1, but includes a roundabout instead of a signal at the consolidated I-84 WB ramp terminals/SW Emigrant Ave-SW Frazer Ave/SW 20<sup>th</sup> St intersection. The consolidated intersection would also be located further south at the existing I-84 WB ramp terminals intersection under this concept.

NORTH INTERCHANGE IMPROVEMENT CONCEPT #N3  
SINGLE LINE TAPING

FIGURE  
**6-5**

#### N4

This concept, shown in Figure 6-6, is similar to Concept N3, but with the roundabout in the same location as the signalized intersection in Concept N1.

#### N5

Concept N5, shown in Figure 6-7, features a large “pinched” roundabout that would connect the I-84 WB ramp terminals/US 395 and SW Emigrant Ave/SW 20<sup>th</sup> Street intersections.

#### N6

This concept, shown in Figure 6-8, is similar to Concept N4, but also includes a grade-separated bypass connecting SW Court Place to SW Frazer Avenue as in N1 Option A.

#### N7

In this concept, shown in Figure 6-9, SW Emigrant Avenue and SW Frazer Avenue are de-coupled between SW 20<sup>th</sup> Street and SW 17<sup>th</sup> Street. The connections from US 395 and the I-84 WB ramp terminals to SW Frazer Avenue are severed, thereby making SW Frazer Avenue serve as a local access road southwest of SW 17<sup>th</sup> Street. This also makes the I-84 WB ramp terminals/US 395 intersection a 3-legged intersection. Side-street access onto SW Emigrant Avenue southwest of SW 17<sup>th</sup> Street is limited to a right-in/right-out connection from the northwest SW 20<sup>th</sup> Street approach only.

#### N8

Concept N8, shown in Figure 6-10, is similar to Concept N1. The difference between the two is that this concept includes a loop ramp onto I-84 WB from northbound US 395 south of the existing ramp terminals intersection. This loop ramp would climb a steep grade to connect with I-84 WB at the bridge over US 395.

#### N9

This concept, shown in Figure 6-11, eliminates the existing I-84 WB ramps and replaces them with a diamond configuration that intersects US 395 just north of the I-84 bridge. This creates a new signalized intersection on US 395 where the ramps come in. Similar to Concept N2, US 395 is rerouted to connect with SW Emigrant Avenue via the existing southeast SW 20<sup>th</sup> Street approach.

#### N10

Concept N10, shown in Figure 6-12, does not make any substantial changes to the built environment. This concept seeks to maximize the efficiency of the existing infrastructure by converting SW 20<sup>th</sup> Street and SW 17<sup>th</sup> Street into a couplet between SW Court Avenue and SW Frazer Avenue. SW 20<sup>th</sup> Street would be one-way southeast-bound, while SW 17<sup>th</sup> Street would be one-way northwest-bound.

FIGURE  
6-12

## N11 (A, B, and C)

In this concept, the I-84 WB ramp terminals are relocated to one of three locations northwest of their existing intersection with US 395. Under Option A, shown in Figure 6-13, the ramp terminals would be located property currently occupied by Cummins Northwest. SW Court Place is realigned to form the northern and eastern approaches to the realigned ramp terminals intersection.

The western approach to this intersection is a new roadway (called SW 23<sup>rd</sup> Street for the purpose of this analysis) connecting the ramp terminal to the US 395/SW Emigrant Avenue intersection. The ramp terminals intersection could also be configured with offsetting "T" intersection where the I-84 Westbound ramp terminals would intersect the SW 23<sup>rd</sup> Street extension in approximately the same location as described above, while SW Court Place would connect to SW 23<sup>rd</sup> Street to the northwest of the ramp terminals. This would avoid locating a local roadway directly across from a freeway ramp terminal.

The ramp terminals would be located at the existing SW 23<sup>rd</sup> Street/SW Dorion Avenue intersection under Option B, shown in Figure 6-14, though SW Dorion Avenue would not connect with the new intersection. SW 23<sup>rd</sup> Street would connect the ramp terminals to SW Court Place.

Option C, shown in Figure 6-15, would have the ramp terminals connect with SW Court Place to the northwest of the Oxford Suites hotel. SW 23<sup>rd</sup> Street would be extended east to the existing I-84 WB ramp terminals intersection to provide a connection between US 395 and the new I-84 WB ramp terminals.

## N12

Concept N12, shown in Figure 6-16 is a single-point urban interchange (SPUI). Under this concept, both the EB and WB ramp terminals intersections with US 395 would come into a single intersection underneath the I-84 bridge over US 395.

## N13

Concept N13, shown Figure 6-17, is a combination of Concepts N1 and N11a. In this concept, the I-84 Westbound ramp terminal is relocated to the west to the property currently occupied by Cummins Northwest. SW Court Place is realigned to form the northern and eastern approaches to the realigned ramp terminals intersection. The western approach to this intersection is a new roadway (called SW 23<sup>rd</sup> Street for the purpose of this analysis) connecting the ramp terminal to the new realigned intersection of US 395, SW 20<sup>th</sup> Street, and the SW Emigrant Avenue-SW Frazer Avenue couplet. The free right-turn movement from US 395 onto SW Frazer Avenue would be maintained.

## **South Side Concepts**

The following is a description of the concepts that affect the south side of the interchange, including the I-84 Eastbound ramp terminal.

1" = 200'

NORTH INTERCHANGE IMPROVEMENT CONCEPT #N13  
SINGLE LINE TAPING

FIGURE  
**6-17**

## S1

Concept S1, shown in Figure 6-18, would realign SW Tutuilla Creek Road and SW Hailey Avenue such that they would intersect with US 395 approximately 1,000 feet south of the I-84 EB ramp terminals. The existing SW Hailey Avenue roadway would remain and its existing access to US 395 would be restricted to right-in/right-out movements. SW Tutuilla Creek Road would dead-end west of the Denny's access.

## S2

This concept, shown in Figure 6-19, would realign SW Tutuilla Creek Road and SW Hailey Avenue to approximately 800 feet south of the I-84 EB ramp terminals. This location would allow the SW Hailey Avenue approach to be aligned over an existing right-out only public access onto US 395. SW Hailey Avenue would maintain a right-in/right-out access onto US 395 at the existing intersection location; however, the roadway would dead-end just south of the Burger King access. Likewise, SW Tutuilla Creek Road would also have a right-in/right-out access onto US 395 at the existing intersection. Unlike Concept S1, SW Tutuilla Creek Road would retain its existing alignment as well under this concept.

## S3

Under this concept, shown in Figure 6-20, SW Tutuilla Creek Road and SW Hailey Avenue would be realigned to approximately 1,100 feet south of the existing EB ramp terminals. Unique to this concept is that the EB ramp terminals would also be realigned approximately 300 feet south of their existing location in a Parclo B configuration. Due to relocation of the EB ramp terminals, the existing SW Hailey Avenue and SW Tutuilla Creek Road roadways would no longer have access to US 395 at their existing location.

## S4

Concept S4, shown in Figure 6-21, would relocate SW Tutuilla Creek Road and SW Hailey Avenue to nearly the same location as in Concept S1. This relocated intersection would have a roundabout instead of a traffic signal. Likewise, the EB ramp terminals would also have a roundabout at their intersection with US 395. The existing SW Tutuilla Creek Road and SW Hailey Avenue alignments would remain with right-in/right-out access onto US 395.

## S5

This concept, shown in Figure 6-22, would realign SW Tutuilla Creek Road and SW Hailey Avenue to the same location as in Concept S1, with a roundabout at the intersection. Unlike in Concept S4, the existing SW Tutuilla Creek Road and SW Hailey Avenue roadways would dead-end prior to their existing intersection with US 395. The EB ramp terminals would remain a signalized intersection.

## S6

Concept S6, shown in Figure 6-23, would relocate SW Hailey Avenue to the same spot as Concept S1; however, it would be a three-legged roundabout intersection as SW Tutuilla Creek Road would

H:\profile\19627 - I-84 US 395 IAMP\dwg\figs\19627\_fig-07-S.dwg Aug 19, 2010 - 10:09am - jommerville Layout Tab: 6-18

retain its existing alignment with a right-in/right-out access onto US 395. The existing SW Hailey Avenue roadway would maintain a right-in/right-out access onto US 395, but it would dead-end beyond the Burger King access. The EB ramp terminals would have a roundabout.

#### S7

SW Tutuilla Creek Road and SW Hailey Avenue are realigned to the same location as in Concept S3 under this concept, shown in Figure 6-24. The unique component of this concept is a new on-ramp onto WB I-84 for northbound traffic on US 395. This on-ramp would depart US 395 approximately 100 feet south of the realigned SW Tutuilla Creek Road-SW Hailey Avenue intersection, pass over I-84 and US 395 at the I-84 bridge, and connect in with the existing on-ramp. This would require the existing SW Tutuilla Creek Road to dead-end west of the Denny's access. The existing SW Hailey Avenue access would be restricted to right-in/right-out movements.

#### S8

In Concept S8, shown in Figure 6-25, SW Tutuilla Creek Road and SW Hailey Avenue would be realigned the same as in Concept S3. The I-84 EB ramp terminals would retain their diamond configuration, but would move approximately 300 feet south, which would necessitate the existing SW Tutuilla Creek Road and SW Hailey Avenue accesses to be removed. A new loop ramp onto I-84 EB for southbound US 395 traffic that departs from US 395 just south of the I-84 bridge and connects to I-84 at the bridge would be constructed.

#### S9

In this concept, shown in Figure 6-26, SW Tutuilla Creek Road and SW Hailey Avenue would be relocated to approximately ¼-mile south of the I-84 EB ramp terminals. The existing SW Hailey Avenue roadway would dead-end just east of Burger King, with its access to US 395 removed. SW Tutuilla Creek Road would retain its existing access as a right-in/right-out access. The realigned SW Tutuilla Creek Road would use the alignment of the existing internal roadway within the cemetery.

#### S10

This concept, shown in Figure 6-27, seeks to avoid rerouting SW Tutuilla Creek Road through the Olney Cemetery while still addressing the forecast demand for southbound left-turns from US 395 onto SW Tutuilla Creek Road by creating an under- or overpass of US 395. In this concept, southbound left-turns from US 395 would instead make a free right-turn onto a loop ramp that would cross US 395 at a separate grade and then merge back onto SW Tutuilla Creek Road. The creation of this ramp would require that SW Hailey Avenue be closed just west of Burger King, though it would retain signalized access onto US 395 at the existing location. Consequently a new signalized access for through traffic on SW Hailey Avenue would be provided at the location of the existing right-out access onto US 395 that was discussed under Concept S2. Traffic from SW Tutuilla Creek Road traveling to US 395 would retain full signalized access at its current location.

6-27**

### S11 (A and B)

Concept S11 creates a new frontage roadway paralleling US 395 to the east from a relocated SW Tutuilla Creek Road-SW Hailey Avenue intersection (approximately the same location as in Concept S1) to the existing SW Tutuilla Creek Road. This roadway would primarily use the existing space between US 395 and the Olney Cemetery. There are two options for this new roadway. Under Option A, shown in Figure 6-28, it would serve one-way traffic from US 395 onto SW Tutuilla Creek Road, with traffic from SW Tutuilla Creek Road bound for US 395 using the existing signalized intersection. Option B, shown in Figure 6-29, would have the new roadway serve two-way traffic traveling to and from SW Tutuilla Creek Road. The existing SW Tutuilla Creek Road approach to US 395 would be replaced by a right-turn only from SW Tutuilla Creek Road onto US 395.

Under both options, SW Hailey Avenue would retain some form of access at the existing signalized intersection, though under Option B it is likely that it would be a right-in/right-out access.

### S12

This concept, shown in Figure 6-30, would create a tunnel under I-84 and the neighborhoods in the northeast quadrant of the interchange to connect SW Tutuilla Creek Road to SW Frazer Avenue at some point between SW 20<sup>th</sup> Street and SW 17<sup>th</sup> Street. This would allow traffic traveling between SW Tutuilla Creek Road and the north side of the interchange to bypass US 395 altogether. The existing SW Tutuilla Creek Road-SW Hailey Avenue signalized intersection would be restricted to right-in/right-out access.

### S13

Concept S13, shown in Figure 6-31, would feature a realigned SW Hailey Avenue across from a jug handle allowing SB US 395 traffic to make a u-turn to access SW Tutuilla Creek Road in the near-term. This realignment would be relocated in approximately the same location as S3. In the long-term, it would include the construction of a new road connecting SW 30<sup>th</sup> Street to SW Tutuilla Creek Road.

### S14 (A and B)

Under Option A, shown in Figure 6-32, Concept S14A realigns the I-84 EB off-ramp south of its existing alignment to connect with US 395 at the location of the existing SW Hailey Avenue. SW Hailey Avenue would be realigned to the south on US 395 as it is in Concept S11B, approximately 1,320 feet south of the existing I-84 Eastbound ramp terminals. There would be no modifications to the alignment of SW Tutuilla Creek Road under this concept. Likewise the I-84 EB on-ramp would remain in its current location.

Under Option B, shown in Figure 6-33, of this concept, the existing I-84 Eastbound ramp terminals are both moved to the location of the existing SW Hailey Avenue approach to US 395. In order to accomplish this, the on-ramp to I-84 Eastbound would be constructed as an entering Parclo-A loop ramp in the southwest quadrant of the interchange. The existing alignment of SW Hailey Avenue would become a cul-de-sac to the northeast of the existing US Forest Service building where the current right-out access onto US 395 is provided. A new connection from SW Hailey Avenue to US

H:\profile\6627 - I-84 US 395 IAMP\DWG\figs\0216-33.dwg Aug 19, 2010 - 11:47am - noster Layout Tab: Layout1

395 would be constructed approximately 800 feet south of the I-84 Eastbound ramp terminals. The alignment of Tutuilla Creek Road would remain unchanged and would form a four-legged signalized intersection of US 395 with the I-84 Eastbound ramp terminals.

#### S15 (A and B)

Concept S15 has two options that could be constructed in phases. Option A, shown in Figure 6-34, does not realign any roadways. This concept seeks to maximize the existing roadway system on the south side of I-84 through enhancing the existing US 395/SW Hailey Ave-Tutuilla Creek Road intersection. Under this concept, there would be dual left-turns from SW Hailey Avenue onto US 395 and from southbound US 395 onto Tutuilla Creek Road. The Tutuilla Creek Road approach would be widened to provide for one lane for each turning movement (left, through, and right).

Under Concept S15B, shown in Figure 6-35, nearly the same improvements would be made to the US 395/SW Hailey Ave-SW Tutuilla Creek Road intersection as in Concept S15A. The difference between the two is that the existing SW Hailey Avenue approach would be restricted to right-in only access from US 395 under Concept S15B. A new connection from SW Hailey Avenue to US 395 would be constructed approximately 1,100 feet south of the I-84 Eastbound ramp terminals. The existing alignment of SW Hailey Avenue would allow two way traffic from the new roadway north to the existing Burger King access approach, where it would transition to one-way only traffic from southbound US 395.

### **West Side Concepts**

#### W1

This concept, shown in Figure 6-36, would create a new roadway between the neighborhoods on the southwest side of the interchange to the north side of the interchange. The roadway would connect SW Court Place to SW 28<sup>th</sup> Street, with a side-street connection to SW Goodwin Avenue. A new overpass of I-84 would be constructed for the new roadway.

#### W2

Concept W2, shown in Figure 6-37, would create a split-diamond interchange configuration. The western section of the new interchange would include a north-south roadway similar to the one included in Concept W2. SW Tutuilla Creek Road and SW Hailey Avenue would also be realigned in manner similar to Concept S2.

## **CONCEPT SCREENING**

In order to arrive at the preferred transportation improvement plan, the concepts went through three levels of screening. The first level was a high-level screening to determine if any of the concepts did not meet the basic purpose of the project. After these concepts were screened out, a second level was applied to the remaining concept involving a qualitative assessment of each concept based on the project's adopted evaluation criteria. Following this screening, the remaining concepts were examined quantitatively to determine the final preferred concepts.

The following section provides detailed explanation of this screening process and identifies which concepts were selected by the TAC and PAC as the preferred transportation improvement plan. The Technical Appendix contains more details about the screening process.

### ***Preliminary Purpose and Problem Statement Screening***

Once the initial set of interchange concepts were developed, a preliminary assessment was performed to determine if any of the concepts were not meeting the basic intent of the project purpose and problem statement. The official Purpose and Problem Statement, as approved by the TAC and PAC is outlined below:

#### ***Purpose of the Project:***

*The IAMP is a strategic transportation plan that is designed to protect the long-term function of the Interstate 84 (I-84) / US 395 interchange by preserving the capacity of the interchange while providing safe and efficient operations between connecting roadways. The IAMP will identify land use management strategies, short-term and long-term transportation improvements, access management goals, and strategies to fund identified improvements.*

#### ***Problem Statement:***

*Because of topographic constraints and the construction of I-84, there are only two existing opportunities for access between the areas of Pendleton to the north and south of I-84: US 395 and OR 11. The resulting level of cross-town traffic, especially in the vicinity of the I-84 interchange with US-395, makes it very difficult for motorists exiting the freeway to access downtown, and subsequently, both of the ramp termini operate over capacity. Queues on the eastbound off-ramp are forecast to back onto the mainline of I-84 by the year 2025. Traffic operations within the vicinity of the interchange are also poor. In particular the operations of the Tutuilla Creek/Hailey and 20th Street intersections of US 395 and the 20th Street/Court Place intersection will all need to be improved. There are several direct accesses from commercial properties onto US 395 south of the interchange. The Oregon Department of Transportation (ODOT) initiated the IAMP process to ensure that growth and development will occur in the IMSA without compromising the operation of the interchange. The IAMP will identify long-term transportation improvements, land-use strategies, and implementation policies. The IAMP will satisfy the requirements of Oregon Administrative Rule (OAR) 734-051 and will be developed according to the ODOT IAMP guidelines.*

Based on this initial screening it was determined that concepts that did not provide sufficient capacity for the long-term operations of the interchange did not meet the project's purpose. These concepts include those with a roundabout at the I-84 WB ramp terminals (N3, N4, N5, and N6), the single-point interchange (N12), and concepts with a roundabout at the US 395/SW Hailey Ave-SW Tutuilla Creek Road intersection (S4, S5, and S6). Detailed operational assessments are available in the Technical Appendix.

## ***Basic Qualitative Concept Screening***

After the initial Purpose and Problem Statement screening, a basic qualitative screening of the remaining concepts was conducted. To assist in the evaluation process, the adopted evaluation criteria was reviewed and a screening level evaluation process by which each of the interchange form and local circulation concepts could be evaluated at a high level qualitative perspective was developed. As a part of this process, it was recognized that at this particular level of evaluation, certain evaluation criteria could not be applied to each concept because the criterion was determined to be too specific, required a higher level of detailed information, or was a non-differentiating factor. In these instances, a screening level evaluation was not applied to the concepts. The following outline lists the five screening level categories and the selected evaluation criteria within each category that were investigated as part of this process.

### **Category #1 – Transportation**

*Evaluation Criteria #1 – Improves the operations of the interchange and the adjacent local system*

*Evaluation Criteria #2 – Improves non-vehicular travel*

### **Category #2 – Land Use**

*Evaluation Criteria #1 – Level of right-of-way (ROW) impacts*

### **Category #3 – Cost**

*Evaluation Criteria #1 – Level of construction costs and feasibility*

### **Category #4 – Environmental, Social, and Equity Factors**

*Evaluation Criteria #1 – Environmental impacts*

*Evaluation Criteria #2 – Compatibility*

### **Category #5 – Accessibility**

*Evaluation Criteria #1 – Spacing standards*

Based on the criteria outlined above, an evaluation matrix for each concept was created. These matrices are contained within the Technical Appendix. A summary of the qualitative screening process is provided in Tables 6-1 through 6-3 below. (Note: In general, a + indicates the interchange concept is positively meeting the basic parameters of the evaluation criterion, a - indicates the interchange concept is not meeting the basic parameters of the evaluation criteria, and a 0 indicates the interchange concept is neither positively nor negatively meeting the basic intent of the evaluation criterion. See the Technical Appendix for more detailed information about the scoring criteria).

**TABLE 6-1 SUMMARY OF QUALITATIVE SCREENING PROCESS (NORTH OF I-84 CONCEPTS)**

Evaluation Criteria	Concept									
	N1	N2	N7	N8	N9	N10	N11a	N11b	N11c	N13
Operations	+	+	+	+	+	+	+	+	+	+

Access Spacing	0	0	0	0	0	+	-	0	0	0	0	0	0	-	0

**TABLE 6-3 SUMMARY OF QUALITATIVE SCREENING PROCESS (WEST OF I-84 CONCEPTS)**

Evaluation Criteria	Concept	
	W1	W2
Operations	+	+
Non-Vehicular Travel	+	+
ROW Impacts	0	-
Cost and Feasibility	-	-
Environmental Impacts	-	-
Compatibility	-	-
Access Spacing	-	0

Based on this qualitative screening process, a number of concepts were eliminated from consideration. Generally the eliminated concepts present substantial costs and impacts relative to the remaining concepts recommended for further evaluation. These concepts required:

- 1) the I-84 WB ramps to be realigned through a severe grade in the northeast quadrant of the interchange (N8, N9, and W2),
- 2) SW Emigrant Avenue and SW 17<sup>th</sup> Avenue to be widened, causing multiple property impacts and acquisitions (N7),
- 3) new ramp connections to be introduced that provided minimal operational benefit (S3, S7, S8, and N1 Option A bypass),
- 4) SW Tutuilla Creek Road to be rerouted through the Olney Cemetery (S1, S2, and S9),
- 5) features which posed significant engineering challenges that may make them economically infeasible to construct (S10), or
- 6) cost-prohibitive improvements (N1 Option B bypass and S12).

In addition, Concepts N2 and W1 did not effectively address the existing and future capacity and access issues. Concept N10 was eliminated from consideration later on in the process due to the out-of-direction travel that the couplet would create for northbound US 395 traffic trying to reach the SW Court Place area. Fatal flaws related to the potential design of Concept N11B were identified and the TAC and PAC members preferred Concept N11A over Concept N11C based on its lower level of impacts, so only Concept N11A was moved forward. Concept S11A was also eliminated since it had similar impacts to Concept S11B, but less benefits. Finally, Concept S13 was eliminated due to the out-of-direction travel it created; however, the SW 30<sup>th</sup> Street extension element was carried forward as an add-on to other south-side concepts.

## **Detailed Quantitative Evaluation**

A more detailed evaluation was performed of the concepts remaining after the basic qualitative screening process was completed. Similar to the qualitative screening process, this detailed evaluation centered on the formally adopted set of evaluation criteria developed during the initial stages of the I-84/US 395 IAMP study process. These evaluation criteria were assembled to ensure that each concept would be evaluated for consistency with the overall adopted evaluation criteria. Five broad evaluation criteria were formally adopted as outlined below:

- Transportation Operations – This category consists of those criteria that assess the ability for motorized and non-motorized vehicles to travel through and within the IMSA.
- Land Use – This category consists of those criteria that assess right-of-way impacts, the consistency with adopted land use plans, and economic development impacts.
- Cost – This category consists of those criteria that assess the practicality of a concept from a construction cost and feasibility perspective.
- Environmental, Social, and Equity – This category consists of those criteria that assess the degree to which a concept is compatible with the natural and built environment.
- Accessibility – This category consists of those criteria that assess the degree to which a concept meets or moves toward ODOT's access spacing standards within the vicinity of an interchange.

Detailed descriptions of the five broad evaluation criteria along with the accompanying sub-criteria are provided in the Technical Appendix

To help determine how to rank each of the Concepts according to the evaluation criteria, a scoring system was developed. In essence, each evaluation criterion was assigned a range of numerical values (+2, +1, 0, -1, -2 for example). A definition specific to the evaluation criterion was then assigned to each value, (i.e. "+2" for a "Significant Increase..." and a "-2" for a "Significant Decrease..."). The specific scoring definitions for each criterion are also provided in the Technical Appendix. Using the unique scoring system for each evaluation criterion, Concepts N1, N11a, N13, S11b, S14a, S14b, S15a, and S15b were carefully evaluated and scored by the consultant team. The following paragraphs summarize the results of this evaluation. *A more detailed description of the evaluation process may be found in the Technical Appendix.*

### Transportation Operations

From a transportation operations perspective, the detailed assessment of each concept revealed the following:

- On the north side, all three concepts would improve the operations and safety of the existing interchange. Concept N1 would provide sufficient capacity, but the resulting interchange ramp would not meet ODOT's Highway Design Manual (HDM) capacity standard of 0.70. Concepts N11a and N13 would provide similar operations at the I-84 Westbound ramp terminals; however, Concept N11a would provide additional capacity at the US 395/SW Emigrant Avenue intersection.

- On the south side, Concepts S11b and S14b would completely address the existing queue spillback issue on US 395 southbound from SW Hailey Avenue back through the I-84 Eastbound ramp terminal beyond the planning horizon. Both options would provide similar levels of capacity. Concept S11b is not subject to the HDM capacity standard mentioned above since it does not alter the configuration of the interchange. Concept S14a would address some of the safety concerns associated with existing queue spillback issue by relocating the I-84 Eastbound off-ramp terminal. However, southbound left-turn queues on US 395 are still forecast to occasionally back up into the southbound through lanes at the US 395/SW Tutuilla Creek Road intersection.
- Concept S15b was forecasted to provide enough capacity at the US 395/SW Hailey Avenue-SW Tutuilla Creek Road intersection that queues of southbound left-turning vehicles should not back up in front of the Eastbound ramp terminal within the planning horizon. The extension of SW 30<sup>th</sup> Street may help prolong the lifespan of this concept. Additional improvements may be needed beyond year 2030 with this concept in place.
- While Concept S15a would provide similar levels of long-term capacity at the US 395/SW Hailey Avenue-SW Tutuilla Creek Road intersection, vehicle queue spillback would still be a safety and operational problem given the close spacing to the Eastbound ramp terminal. In addition, the lack of spacing would lead to the potential for vehicle queue spillback on the Eastbound ramp terminal. For these reasons, Concept S15a is only a short-term solution to immediate issues.
- The north-side concepts should all improve bicycle and pedestrian comfort around the existing I-84 WB ramp terminals by providing signalized crossings. On the south side, Concept S11b eliminates the signalized crossing of US 395 at the existing SW Tutuilla Creek Road intersection, so a multi-use path along the east side of US 395 between SW Tutuilla Creek Road and the I-84 EB ramp terminals may be needed so bicyclists can avoid out-of-direction travel up a steep grade.
- While each of the concepts have impacts to the local circulation network, the goal of maintaining access to/from local streets can be achieved at varying levels. On the north-side, all three concepts would require some restrictions and modifications. On the south-side, realignments of SW Hailey Avenue and SW Tutuilla Creek Road in Concept S11b requires re-routing of traffic, but all local street access and connectivity can be achieved with relatively minimal impacts.

#### Land Use

- Table 6-4 provides a summary of the preliminary right-of-way impacts associated with each concept.

**TABLE 6-4 PRELIMINARY RIGHT-OF-WAY IMPACTS**

Concept	Number of Properties Directly Impacted	Preliminary Right-of-Way Acquisition Estimate
N1	17	\$4M
N11a	10	\$3M
N13	27	\$7M
S11b	12	\$9M
S14a	5	\$3M
S14b	5	\$3M
S15a	1	\$0.5M
S15b	4	\$3M

From a land use perspective, the detailed assessment of each concept revealed the following:

- On the north side, Concept N1 and N11a have fairly substantial right-of-way impacts that are compounded under the N13 concept.

On the south side, Concept S11b has the greatest amount of right-of-way needs as improvements would impact both sides of US 395.

Cost

Table 6-5 provides a summary of the total cost estimate for each concept.

**TABLE 6-5 CONSTRUCTION COST ESTIMATES**

	North Side Concepts			South Side Concepts				
	N1	N11a	N13	S11b	S14a	S14b	S15a	S15b
Preliminary Construction Cost	\$4M	\$9M	\$12M	\$4M	\$8M	\$16M	\$3M	\$3M
Preliminary Right-of Way Cost	\$4M	\$3M	\$7M	\$9M	\$3M	\$3M	\$0.5M	\$3M
<b>Total</b>	<b>\$8M</b>	<b>\$12M</b>	<b>\$19M</b>	<b>\$13M</b>	<b>\$11M</b>	<b>\$19M</b>	<b>\$3.5M</b>	<b>\$6M</b>

From a cost and constructability perspective, the detailed assessment of each concept revealed the following:

- Concept N1 and S15a represent the lowest overall cost between the north and south sides.
- Compared to Concept N1, the construction costs of Concept N11a are estimated to be twice as expensive.
- Concept N13, which is essentially a combination of N1 and N11a, is the most expensive north side concept.
- On the south side, Concept S14b is the most expensive due to the construction of new EB ramps.

- Concepts S14a and S14b would have some construction challenges associated with the EB ramps through, along, and over Tutuilla Creek.

Environmental/Social

From an environmental/social impacts perspective, the detailed assessment of each concept revealed the following:

- There are no significant environmental issues associated with any of the north side concepts.
- All three north side concepts would have varying degrees of social impacts associated with the residential properties located along SW 20<sup>th</sup> Street and SW Dorion Avenue.
- On the south side, Concepts S14a and S14b are likely to have substantial environmental impacts to Tutuilla Creek.

Accessibility

From an accessibility perspective, the detailed assessment of each concept revealed the following:

- On the north side, Concept N1 does the best job at balancing local property access with the overall function of US 395.
- On the south side, Concept S11b works toward the OHP access spacing standards and ensures the best long-term function of US 395.

After applying the specific evaluation criteria to each concept and applying equal weighting to each sub-category evaluation, an average score for each of the five primary evaluation criteria was calculated. Table 6-6 summarizes the primary evaluation criteria scoring for each concept and also provides an overall total score based on the total of the averages of the five primary evaluation criteria. This process was followed to provide a basis for comparison between each concept for the TAC and PAC.

**TABLE 6-6 EVALUATION CRITERIA SCORING SUMMARY**

Evaluation Criteria	North Side Concepts			South Side Concepts				
	Concept N1	Concept N11a	Concept N13	Concept S11b	Concept S14a	Concept S14b	Concept S15a	Concept S15b
Transportation Operations	1.0	1.0	1.25	0.75	0.25	0.5	-2.0	0.0
Land Use	0.0	0.0	0.0	-1.0	0.5	0.5	1.5	0.5
Cost/Implementation	0.0	-0.5	-0.5	0.0	-1.0	-1.0	1.0	0.5
Environmental/Social	0.5	0.0	0.0	-1.0	-1.5	-1.5	0.5	0.0
Accessibility	1.0	-0.5	-0.5	1.5	1.0	1.0	-0.5	-0.5
Total Score	<b>2.5</b>	<b>0.0</b>	<b>0.25</b>	<b>0.25</b>	<b>-0.75</b>	<b>-0.5</b>	<b>0.5</b>	<b>0.5</b>

In reviewing the summary evaluation information presented above, the following conclusions can be made:

#### *North Side Concepts*

Concepts N1, N11a, and N13 can all adequately serve the long-term traffic demands on the interchange and surrounding land uses. As a result, the north side concepts can essentially be broken down to which concept has the fewest land use impacts, is the least costly, and best meets the accessibility and access needs of the interchange and surrounding local street network. When reviewed from a cost/implementation and accessibility perspective, Concept N1 starts to stand out more than the others. This is particularly true when you consider the construction costs of Concepts N11a and N13 are more than double that of Concept N1 and have no substantial benefits in any of the other evaluation categories.

#### *South Side Concepts*

Although it scores well in the cost and land use categories, Concept S15a has significant operational and safety concerns that are considered to be fatally flawed in the long-term. As a result, only Concepts S11b, S14a, S14b, and S15b have long-term potential. Amongst these four remaining concepts, Concept S15b has the least amount of impacts while still providing adequate capacity for the year 2030 planning horizon. Concept S15a could be constructed in the near-term and then Concept S15b could be constructed to provide longer-term benefits with little construction effort lost. Looking beyond the planning horizon, one of the other three concepts may need to be constructed. Amongst these three concepts, Concept S11b has a lower overall cost but a considerably higher land use impact. Concepts S14a and S14b have comparably lower land use impacts with considerably higher costs and environmental impacts.

## **CONCEPT DEVELOPMENT AND SCREENING SUMMARY**

Exhibit 6-1 summarizes the timeframe of when concepts were developed and removed from consideration and Table 6-7 summarizes the reasoning for concepts being dismissed from consideration.

S15b	Yes	Yes
W1	No	No - Does not address interchange issues
W2	No	No – Constructability, Land use impacts

Figures 6-38 through 6-40 provide detailed double-line illustrations of the concepts recommend by the PAC and TAC to be considered as the transportation improvement plan of the IAMP.

## OTHER IMPROVEMENTS

In addition to the concepts described above, the PAC and TAC supported the inclusion of two additional improvements not directly related to the interchange to be included in the IAMP. These improvements are the SW 30<sup>th</sup> Street extension and the north-south connection proposed in Concept W1.

### SW 30<sup>th</sup> Street Extension

Concept S13 introduced the idea of extending SW 30<sup>th</sup> Street from its current terminus east of US 395 all the way to SW Tutuilla Creek Road near SW Marshall Avenue. While Concept S13 was screened out, the SW 30<sup>th</sup> Street extension is supported by members of both committees since it provides a valuable east-west connection. Since it is not directly related to the interchange, it will need to be adopted into the City’s transportation system plan (TSP). Therefore, the preferred south side concepts are all analyzed with and without the extension of SW 30<sup>th</sup> Street. In order to be conservative, the analysis results scored in the section above were done without the extension.

The PAC and TAC raised questions regarding the location of the eastern end of the extension. Two different alignments were discussed. The first alignment would involve the SW 30<sup>th</sup> Street extension aligning directly across from SW Marshall Avenue. This alignment would directly impact the existing Herr Lumber business. The second alignment would involve the SW 30<sup>th</sup> Street extension skirting the southern Herr Lumber property line. This would create an offset intersection with SW Marshall Avenue, so the second alignment would also involve a more southerly realignment of SW Marshall Avenue so that it would connect to Tutuilla Creek Road across from the 30<sup>th</sup> Street alignment. Based on a preliminary assessment of right-of-way costs, it was found that the second scenario would be less than half the cost of the first scenario.

CONCEPT S15B  
DETAILED DRAWING  
PENDLETON, OREGON

FIGURE  
**6-40**

## **Concept W1 North-South Connection**

Concept W1, previously described in this section, included a new north-south connection from the residential neighborhoods west of US 395 to the SW Court Place area. US 395 is the primary north-south connection for the majority of residents of southern Pendleton. This additional connection would reduce traffic demand along US 395 and is therefore supported by the PAC and TAC.

## **PREFERRED CONCEPT DETAILED CAPACITY ANALYSIS**

The concept screening process described above resulted in the selection of preferred concepts for the north and south sides of the interchange. TAC and PAC members selected Concept N1 as the preferred concept for the north side and Concepts S15a and S15b, along with the SW 30<sup>th</sup> Street extension, for the south side. Concepts S15a and S15b are to be implemented in a phased approach with Concept 15a being constructed first, followed by Concept S15b being implemented when warranted. The SW 30<sup>th</sup> Street extension will need to be integrated in the City of Pendleton Transportation System Plan (TSP).

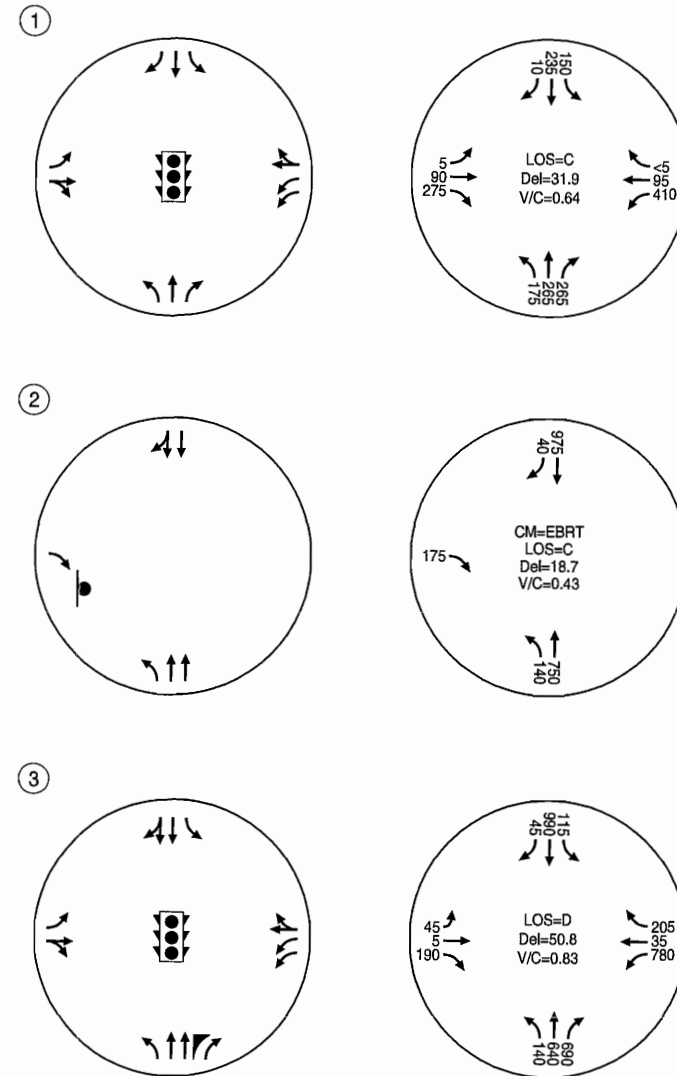

A detailed capacity analysis of these concepts is presented in Figures 6-41 through 6-43. The south side concepts are analyzed with and without the SW 30<sup>th</sup> Street extension in place. Since the S15a concept is not anticipated to have sufficient capacity over the entire 20-year planning horizon, it is analyzed under interim year 2020 conditions.

### **North Side Capacity Analysis**

As Figure 6-41 shows, the study intersections on the north side are forecast to operate with adequate capacity. The new I-84 Westbound ramp terminal is forecast to operate with a volume-to-capacity (v/c) ratio of 0.83 in the year 2030. This is higher than the ODOT Highway Design Manual (HDM) standard of a v/c ratio of 0.70 for new ramp terminals. It should also be noted that in order to achieve the operations shown in Figure 6-41, a second southwest-bound left-turn lane from SW Court Avenue onto SW 20<sup>th</sup> Street will need to be constructed and SW 20<sup>th</sup> Street will need to be a five-lane section with a raised median from SW Court Avenue to the Westbound ramp terminal. A left-turn into SW Dorion Avenue may be allowed in the near- and mid-term timeframes. However, as traffic volumes increase, it will likely be restricted if queues on SW 20<sup>th</sup> Street begin to spill back from the US 395 intersection.

### **South Side Capacity Analysis**

Concept S15a was analyzed under interim year 2020 conditions in order to determine the expected lifespan of the improvement. Year 2020 volumes assume linear growth between existing volumes and forecast year 2030 volumes, which are based on the Pendleton travel demand model. Figure 6-42 shows the results of this analysis. As the figure shows, the US 395/SW Hailey Avenue-SW Tutuilla Creek Road intersection is forecast to have adequate capacity when examined in isolation. The analysis also reveals that the 95<sup>th</sup>-percentile queue for the southbound left-turn on US 395 at the US 395/SW Hailey Avenue-SW Tutuilla Creek Road intersection is projected to be at its capacity, assuming the SW 30<sup>th</sup> Street extension is not constructed at this time. Thus, Concept S15a is

anticipated to have a lifespan of approximately 8-10 years before additional improvements, such as the SW 30<sup>th</sup> Street extension or Concept S15b, will be needed.

Figure 6-42 also shows the anticipated operational conditions assuming that the SW 30<sup>th</sup> Street extension is constructed in this timeframe. The analysis shows that this additional east-west connectivity in the SW Tutuilla Creek Road area will likely provide enough relief at this intersection that southbound left-turn queues will not back-up through the I-84 Eastbound ramp terminals. As the analysis of Concept S15b shows below, this enhanced connectivity is projected to be sufficient through 2030 only if Concept S15b improvements are in place. Therefore it is likely that when combined with Concept S15a, the enhanced connectivity provided by the extension of SW 30<sup>th</sup> Street will increase the lifespan of the improvements by five years or less.

Figure 6-43 illustrates the projected year 2030 conditions for Concept S15b with and without the SW 30<sup>th</sup> Street extension. As the figure shows, either with or without the SW 30<sup>th</sup> Street extension it is anticipated that the storage for southbound left-turns from US 395 onto SW Tutuilla Creek Road will be at capacity. Therefore, it can be assumed that additional improvements may be needed beyond Concept S15b sometime shortly after 2030.

**Section 7**  
Interchange Area  
Management Plan

## Interchange Area Management Plan

The I-84/US 395 IAMP provides a transportation improvement plan and an Access Management Plan (AMP). The transportation improvement plan includes interchange and local circulation improvements, as well as a phasing schedule. The AMP contains an access management plan and documents the justification for the necessary deviations to ODOT's access management standards.

Through adoption by the City of Pendleton and ODOT, future development located within the IMSA will be required to make circulation and access improvements, right-of-way dedications, and pay impact fees, as identified in this plan. Implementation of the IAMP is expected to preserve the functional integrity of the interchange over time and ensure viable access to existing and future land uses. Finally, the action items contained within the implementation plan (Section 8) will ensure proper coordination between the various stakeholders and that the IAMP remains a dynamic long-term planning tool.

### TRANSPORTATION IMPROVEMENT PLAN OVERVIEW

A comprehensive transportation improvement plan including a local circulation and access plan within the interchange management study area (IMSA) has been developed based on the concept screening and evaluations outlined in Section 6. Figure 7-1 illustrates the transportation improvement plan for the north side of the IMSA, which will likely be Phase 1 of the overall improvement program described in this section, while Figures 7-2 and 7-3 illustrate Phases 2 and 3 of the transportation improvement plan, which address the south side of the IMSA. These plans include alignments of new roadways and intersections and modifications to existing roadways and intersections. Each transportation improvement identified in Figures 7-1 through 7-3 is described in Table 7-1. This table also contains preliminary cost estimates for each phased set of improvements.

**TABLE 7-1 IAMP TRANSPORTATION IMPROVEMENTS**

	<b>Improvements</b>	<b>Cost Estimate<sup>1</sup></b>
Phase 1 (North Side)	A. Realign the westbound ramp terminal, SW 20 <sup>th</sup> Street, SW Emigrant Avenue, and US 395 into a single signalized intersection.	\$8.0M
	B. Widen SW 20 <sup>th</sup> Street to a five-lane cross section between SW Emigrant Avenue and SW Court Street.	
	C. Widen southwest-bound SW Court Avenue to accommodate dual left-turn lanes at the SW 20 <sup>th</sup> Street intersection.	
Phase 2 (South Side)	A. Widen US 395 to develop dual southbound left-turn lanes at the SW Hailey Avenue-SW Tutuilla Creek Road intersection.	\$4.5M
	B. Widen SW Tutuilla Creek Road to receive the dual left-turns from US 395	
	C. Widen SW Hailey Avenue to accommodate dual eastbound left-turn lanes at the US 395/SW Hailey Avenue-SW Tutuilla Creek Road intersection.	
	D. Modify the traffic signal at US 395/SW Hailey Avenue-SW Tutuilla Creek Road to accommodate east-west split signal phasing.	
Phase 3 (South Side)	E. Close the eastbound SW Hailey Avenue approach at the US 395/SW Hailey Avenue- SW Tutuilla Creek Road intersection.	\$6.0M
	F. Realign SW Hailey Avenue to intersect US 395 approximately 800 feet to the south and signalize.	

<sup>1</sup>Includes preliminary construction and right-of-way cost estimates based on 2010 dollars.

The following sections provide details on the major improvements identified in the Transportation Improvement Plan, including possible deviations from standards that may be required.

**Phase 1 - North Side Improvements**

The improvements planned for the north side of the IMSA are shown in Figure 7-1 (previously referenced to as Concept N1). These improvements will be needed first given that the existing queue spill back on US 395 from the SW 20<sup>th</sup> Street/SW Emigrant Avenue intersection is the most prevalent safety and operational issue in the field today. As such, the north side improvements are herein referred to in the IAMP as the Phase 1 North Side Improvements. These improvements align the SW 20<sup>th</sup> Street and US 395 travel corridors. A new signalized I-84 Westbound ramp terminal will be developed at the junction of these two alignments. The US 395-SW 20<sup>th</sup> Street alignment will need two northbound through travel lanes resulting in a full five-lane cross section on SW 20<sup>th</sup> Street. Ultimately, a raised median will be needed along the new SW 20<sup>th</sup> Street alignment between SW Court Place and SW Emigrant Avenue. A northbound left-turn into SW Dorion Avenue from SW 20<sup>th</sup> Street could be maintained initially at the time of construction. However, as traffic volumes increase, it will likely need to be restricted to right-in/right-out if queues on SW 20<sup>th</sup> Street begin to spill back from the I-84 westbound ramp terminal. The SW 20<sup>th</sup> Street/SW Court Place intersection will also need to be modified to provide dual left-turns from southwest-bound SW Court Avenue to SW 20<sup>th</sup> Street.

Possible Exceptions/Deviations from Standards

There are two exceptions/deviations that will be required as part of the north side improvements. First, the realigned US 395-SW 20<sup>th</sup> Street corridor and its intersection with I-84 Westbound ramp

terminal/ SW Emigrant Avenue will be the new interchange access point. The development of this intersection will be new construction and as such, the operational performance standard falls under the guidance of the Oregon Highway Design Manual (HDM). The applicable volume to capacity (v/c) ratio for a new interchange ramp terminal in the HDM is 0.70. As was shown in Section 6, the projected operational performance of the intersection is forecast to be a v/c ratio of 0.83 under 2030 volumes. This difference will require an alternative mobility standard for the I-84 Westbound ramp terminal to be adopted as part of the IAMP.

The second major deviation is related to the access spacing standards outlined under Oregon Administrative Rule 734, Division 51 and the Oregon Highway Plan (OHP). This is discussed later in this section in the access management plan subsection.

**Phase 2 and 3 - South Side Improvements**

The need for improvements on the south side are anticipated to occur after the north side. As such, the south side improvements are herein referred to in the IAMP as the Phase 2 and 3 South Side Improvements. Unlike the north side improvements which will be implemented as one complete project, south side improvements will likely occur in incremental (or phased) steps in order to minimize impacts to existing businesses, while still providing sufficient mobility and safety. Table 7-2 summarizes the south side interchange improvement phasing plan. The table shows the approximate timeframe that each phase will need to be constructed and provides an estimate for the expected lifespan of the improvement, assuming that it is constructed when it becomes needed. A more detailed description of the analysis completed to determine the phasing plan shown below is contained within the Technical Appendix.

**TABLE 7-2 SOUTH SIDE PHASING**

<b>Overall Project Phase</b>	<b>Implementation Timeframe</b>	<b>Anticipated Lifespan (from Existing Conditions)</b>
Phase 2	Near-term (1-3 years)	8-10 years
Phase 3	Mid/Long-term (8-10 years)	15-20 years

As Table 7-2 shows, Phases 2 (previously referenced as Concept S15a) and 3 (previously referenced as Concept S15b) will address the forecasted 20-year demand.

These implementation estimates are based on current traffic projections and assume linear growth in traffic volumes. The forecasted future volumes and the pace in which they grow over the next 20 years may shorten or extend the anticipated lifespans for Phases 2 and 3 (e.g., east-west connectivity improvements, such as SW 30<sup>th</sup> Street, have a greater or lesser effect than anticipated, development patterns change from what is currently planned, etc...). Thus, operational triggers will be adopted (see Section 8) to monitor the need and ultimate implementation of each phase based on the 95<sup>th</sup>-percentile southbound left-turn queue at the US 395/SW Hailey Avenue-SW Tutuilla Creek Road intersection.

## Phase 2

Phase 2, as shown in Figure 7-2, involves the widening of the US 395/SW Hailey Avenue-SW Tutuilla Creek Road intersection. Widening the intersection would increase its capacity and reduce the potential for southbound left-turn queues to back up on US 395 from this intersection through the I-84 Eastbound ramp terminal. This phase is projected to last approximately 8-10 years if it were built in 2010. If an extension of SW 30<sup>th</sup> Street from its current eastern terminus to SW Tutuilla Road is constructed, then the Phase 2 improvements would be adequate for a slightly longer period of time. This additional period of time is anticipated to be less than five years.

## Phase 3

Phase 3, as shown in Figure 7-3, involves the relocation of the SW Hailey Avenue approach to US 395 from its current location to approximately 800 feet to the south. This would create a new signalized intersection on US 395 at this location. The benefit of this phase is that by removing the eastbound SW Hailey Avenue approach from its existing location, additional green time at the existing signal may be allocated to the southbound US 395 approach; thereby reducing the possibility of queues backing up through the I-84 Eastbound ramp terminal. This phase is anticipated to be adequate until approximately the year 2030, with or without the extension of SW 30<sup>th</sup> Street.

## Possible Exceptions/Deviations from Standards

The deviations that will be required for these two phases are related to access spacing and are discussed in the following subsections.

## **ACCESS MANAGEMENT PLAN**

As part of the I-84/US 395 IAMP, access locations were evaluated based on ODOT's Division 51 Access Management standards and an assessment of traffic operations and safety as described in Action 3C.3 of the 1999 Oregon Highway Plan. Accordingly, an Access Management Plan (AMP) is developed to preserve the operational integrity and safety of primary roadways (e.g., US 395, SW Emigrant Avenue, etc...) serving the interchange area, while maintaining viable access to all parcels in the IMSA. The AMP contains both a plan for actions to be taken on City of Pendleton roadways (i.e. SW Tutuilla Creek Road, SW Hailey Avenue, and SW 20<sup>th</sup> Street) and adopted into the City's TSP, and a plan, which is implemented by ODOT on state highway facilities (i.e., I-84, US 395, SW Emigrant Avenue, and SW Frazer Avenue) and adopted into the OHP as part of the facility plan.

On the north side of the IMSA, an AMP is identified for the near-, medium-, and long-term timeframes. An AMP is identified on the south side for each improvement phase, as well as the near-, medium-, and long-term timeframes. The overall AMP is illustrated in Figures 7-4 and 7-5. Justification is also provided for public access locations where deviations from ODOT's access management standards are necessary. Access management will be implemented as part of ODOT and City project development and delivery processes or as future land use changes occur, as is described in the following subsections.

IAMP ACCESS MANAGEMENT PLAN, SOUTH SIDE PENDLETON, OREGON

FIGURE 7-5

## **General Access Management Implementation**

Under ODOT's current access management policy, the 1999 Oregon Highway Plan stipulates that the desired distance between an interchange ramp terminal and the first full approach (public or private) on the crossroad should be a minimum of 1,320 feet (¼-mile). The first right-in/right-out access should be a minimum of 750 feet from the ramp terminal. Currently there are 26 private approaches and 17 public street approaches on the north side of the IMSA and 9 private and 3 public approaches on the south side within 1,320 feet of the interchange ramp terminals, as was previously documented in Figure 4-6.

## **Existing Private Approach Policy**

ODOT guarantees Access Permit protection, as allowed within ORS374.305 & 310, to all existing private accesses. Each will remain a valid access as long as the existing uses remain on property/site and there is no capital improvement project that would trigger review of the access (per OAR 734.051.0285). An access evaluation will be required when any of the following land use actions leads to a peak hour increase in 50 trips or more over the prior use, a daily increase of 500 trips or more over the prior use, or the increase represents a 20 percent or more increase in trips on a typical day/peak hour:

- Modifications to existing land use or zoning,
- Changes to plan amendment designations;
- Construction of new buildings;
- Increases in floor space of existing buildings;
- Division or consolidation of property boundaries;
- Changes in the character of traffic using the driveway/approach;
- Safety or operational improvements;
- Changes to internal site circulation design or inter-parcel circulation;
- Reestablishment of a property's use (after discontinuance for two years or more that trigger a Traffic Impact Assessment as defined below) that occurs on the parcels served by the approaches; or,
- Capital improvement projects.

In general, the types of improvements identified for accesses within the IMSA include:

- Modifying, mitigating, consolidating, or removing existing approaches pursuant to an access management plan as part of the highway project development and delivery process (OAR 734-051);
- Improving traffic safety and operations by improving the local street network to provide alternate access, better local street connectivity, and reducing conflict points. ; and,

- Restricting highway access but improving arterial access by introducing shared access, cross-over easements, consolidated access when separate parcels are assembled for redevelopment, and access via collector or local streets.

The time period over which the measures outlined in the following text will be implemented will depend on the rate of redevelopment within the IMSA and when the projects identified previously are constructed. As each parcel redevelops, or upon capital improvement, accesses will be evaluated to determine how they will be modified in order to move in the direction of meeting the access spacing standards and long-term vision of driveway consolidation while still providing access as defined in OAR 734-051.

### **North Side Access Management**

Figure 7-4 illustrates the AMP for the north side of the IMSA. The AMP is divided into three timeframes: near-term, mid-term, and long-term. The near-term plan illustrates how access will be controlled with the initial construction of identified north side improvements (referred to as Phase 1 - North Side improvements). After the north side improvements are constructed, ODOT and the City could then begin implementing the mid-term plan, based upon parcels redeveloping or safety and operational needs warranting access restrictions. It is envisioned that further down the road, after the mid-term measures are warranted, the long-term plan would be implemented based upon the need to address increasing traffic volumes. The following is a description of the AMP for each major roadway.

#### SW 20<sup>th</sup> Street

The realignment of SW 20<sup>th</sup> Street will necessitate complete access control for most private properties between the new I-84 Westbound terminal and SW Court Place. A median would be constructed with the project from the I-84 Westbound terminal to SW Court Place, with a break to allow northbound and eastbound left-turns at SW Dorion Avenue. In the near-term this would be a full-access median break, then restricted to left-in/right-in/right-out only in the mid-term, and finally to right-in/right-out only in the long-term. The need to restrict this access will be based on queues spilling back through this intersection.

Full access would remain at the SW Court Place signalized intersection. North of this intersection, new access points would not be allowed on the west side of SW 20<sup>th</sup> Street up to the existing shopping center driveway. On the east side of the road, the City will look for opportunities to consolidate access of properties as they redevelop over the long-term time frame.

#### SW Emigrant Avenue-SW Frazer Avenue

The overall long-term goal for the SW Emigrant Avenue-SW Frazer Avenue couplet is that no individual properties will have direct access to the street between the ramp terminal and SW 17<sup>th</sup> Avenue. Access to properties along the couplet should be provided via one of the side streets (i.e., SW 17<sup>th</sup>, SW 18<sup>th</sup> and SW 19<sup>th</sup> Avenues). The short block lengths along the couplet ensure that nearly every parcel, except those southeast of SW Frazer Avenue along the base of the hillside, have alternative access available on a side street.

Accesses along either roadway that are shown to be restricted in the near-term are either in close proximity to the interchange (i.e., between the ramp terminal and SW 19<sup>th</sup> Avenue) or are minor access points (e.g. left or right in/out only). Additionally, these parcels have alternative full access onto a side-street (i.e., SW 19<sup>th</sup> Avenue). As traffic volumes increase, ODOT and the City will need to work with the property owners of the parcels shown in the mid-term timeframe to ensure that reasonable access to these parcels can be provided via a side-street.

The long-term access plan has some unique challenges that likely cannot be overcome until the properties on the southeast side of SW Frazer Avenue redevelop. The topography of the hillside prevents the westernmost property from being able to access SW Frazer Place and the other property near the SW 17<sup>th</sup> Avenue/SW Frazer Avenue intersection from being able to access the road along most of the property frontage. Additionally the existing site configuration of this property near the intersection precludes it from accessing SW Frazer Place where topography would allow. Therefore access to these properties will likely need to remain on SW Frazer Avenue. Ideally these accesses would be aligned with SW 18<sup>th</sup> and 19<sup>th</sup> Avenues.

#### US 395

The only approach that currently exists on US 395 north of I-84 is the right-turn slip lanes onto SW Frazer Avenue. In order to maintain efficient operations at the I-84 Westbound ramp terminal intersection, these lanes would remain. No new approaches would be allowed onto US 395.

#### SW Dorion Avenue

The access management plan for SW Dorion Avenue is to not allow any new accesses along the roadway between SW 20<sup>th</sup> Street and the existing Safeway access and SW 21<sup>st</sup> Street intersection.

#### SW Court Place

The access management plan for SW Court Place is to not allow any new accesses along the roadway between SW 20<sup>th</sup> Street and the existing Safeway and Wal-Mart accesses (approximately 330 feet from SW 20<sup>th</sup> Street).

#### SW Court Avenue

New accesses will not be allowed on the southeast side of SW Court Avenue from the SW 20<sup>th</sup> Street intersection back to the first existing access to Melanie Square (approximately 310 feet from SW 20<sup>th</sup> Street). Accesses onto SW Court Avenue currently exist on the northwest side of the roadway for the same distance back from SW 20<sup>th</sup> Street. The City will look for opportunities to consolidate access points here as properties redevelop and cross-easements can be established.

### **South Side Access Management**

Figure 7-5 illustrates the AMP for the south side of the IMSA. The AMP is outlined according to the incremental or phased implementation of the south side improvements. The following is a description of access management along the three major south side roadways.

## US 395

The AMP for US 395 is primarily focused on not allowing new private accesses to the highway and minimizing existing approach connections over time through closures and consolidations. This plan will be implemented in the near-, mid-, and long-term time frames as outlined in Figure 7-5. The existing public short connection between US 395 and SW Hailey Avenue south of the SW Hailey Avenue intersection will be closed in the near-term with the South Side - Phase 2 improvements. When the realigned SW Hailey Avenue connection is established at US 395 as part of the South Side Phase 3 improvements, further access consolidation and closures will be implemented in the mid- and long-term time frames.

In the long-term, the accesses in this segment of US 395 between Tutuilla Creek Road and the realigned Hailey Avenue may be restricted to right-in/right-out access by a raised center median that will be constructed to address future operational and/or safety issues.

## SW Hailey Avenue

The AMP plan for SW Hailey Avenue is focused on closing the short connection to US 395 as mentioned above and to not allow any new accesses in the vicinity of US 395 in the near-term. In the mid to long-term time frames when the realigned SW Hailey Avenue connection is established to US 395, the AMP will focus on establishing access control along the realignment so as to preserve its safety and operational integrity.

## SW Tutuilla Creek Road

The AMP for SW Tutuilla Creek Road is to minimize the number of driveways through consolidation and closure of private driveways. An eastbound left-turn lane to SW Hailey Avenue will be constructed in conjunction with the widening of SW Tutuilla Creek Road in order to facilitate safe and efficient access to properties along the north side of SW Tutuilla Creek Road.

### ***Deviations to the Division 51 Access Management Standards***

A number of accesses will not meet the applicable OAR Division 51 access spacing standard. Deviations are required under the provisions of OAR 734-51-0135(3) as described below. These deviations will be reviewed by the Region Access Management Engineer. Under the provisions of OAR 734-51-0135(3), the Region Access Management Engineer may approve a deviation if:

- (a) Adherence to spacing standards creates safety or traffic operation problems;*
- (b) The applicant provides a joint approach that serves two or more properties and results in a net reduction of approaches to the highway;*
- (c) The applicant demonstrates that existing development patterns or land holdings make joint use approaches impossible;*
- (d) Adherence to spacing standards will cause the approach to conflict with a significant natural or historic feature including trees and unique vegetation, a bridge, waterway, park, archaeological area, or cemetery;*
- (e) The highway segment functions as a service road;*
- (f) On a couplet with directional traffic separated by a city block or more, the request is for an approach at mid-block with no other existing approaches in the block or the proposal consolidates existing approaches at mid-block; or*
- (g) Based on the Region Access Management Engineer's determination that:*
  - (A) Safety factors and spacing significantly improve as a result of the approach; and*
  - (B) Approval does not compromise the intent of these rules as set forth in OAR 734-051-0020 (Which states: The purpose of Division 51 rules is to provide a safe and efficient transportation system through the preservation of public safety, the improvement and development of transportation facilities, the protection of highway traffic from the hazards of unrestricted and unregulated entry from adjacent property, and the elimination of hazards due to highway grade intersections.)*

The following is a description of the justification for deviation for each of the public accesses requiring a deviation. Additional deviations for private accesses may be considered during implementation. As was previously mentioned, ODOT guarantees Access Permit protection, as allowed within ORS374.305 & 310, to all existing private accesses. Each will remain a valid access as long as the existing uses remain on property/site and there is no capital improvement project that would trigger review of the access (per OAR 734.051.0285).

#### **North Side Access Points**

##### ***Public Access to SW Dorion Avenue***

Deviations to the access spacing requirement identified in OAR Division 51 are required at the SW Dorion Avenue/SW 20<sup>th</sup> Street intersection, which will be located approximately 380 feet northwest

of the I-84 Westbound ramp terminal, as shown in Figure 7-4. As was mentioned above, a deviation may be approved if:

*(b) The applicant provides a joint approach that serves two or more properties and results in a net reduction of approaches to the highway;*

**Response:** SW Dorion Avenue provides access for several residential and commercial properties. This access is not necessarily a reduction in access numbers. However, it is a reduction in that today it is a full access and under this plan it would move in the direction of becoming a right-in/right-out only access in the long-term.

*(g) Based on the Region Access Management Engineer's determination that:*

*(B) Approval does not compromise the intent of these rules as set forth in OAR 734-051-0020 (Which states: The purpose of Division 51 rules is to provide a safe and efficient transportation system through the preservation of public safety, the improvement and development of transportation facilities, the protection of highway traffic from the hazards of unrestricted and unregulated entry from adjacent property, and the elimination of hazards due to highway grade intersections.)*

**Response:** This access management plan meets the intent of the Division 51 rules as it reduces vehicle turning conflicts within the interchange access management area, and protects the flow of highway traffic traveling to/from the interchange by moving in the direction of restricting the access to right-in/right out only in the long-term.

#### *Public Access to SW Court Avenue/SW Court Place*

Deviations to the 1,320-foot access spacing requirement identified in OAR Division 51 are required at SW Court Avenue/SW Court Place, located approximately 660 feet northwest of the I-84 Westbound ramp terminal. Under the provisions of OAR 734-51-0135(3), the Region Access Management Engineer may approve a deviation if:

*(a) Adherence to spacing standards creates safety or traffic operation problems;*

**Response:** Restricting this access would eliminate much of the functionality of the new SW Court Place overcrossing of the railroad by disrupting the connection it provides between northwest and downtown Pendleton. It would also divert more traffic down SW 20<sup>th</sup> Street and the SW Emigrant Avenue-SW Frazer Avenue couplet, which would further increase congestion at the I-84 westbound ramp terminal. This rerouting of traffic would result in increased congestion and safety issues elsewhere on the system.

#### *Public Accesses to 19th and 18th Avenues*

The access management plan for the SW Emigrant Avenue-SW Frazer Avenue couplet does not meet the 1,320-foot access spacing requirement identified in OAR Division 51 at SW 19<sup>th</sup> and 18<sup>th</sup> Avenues and require that the Region Access Management Engineer approve a deviation to the standards. Under the provisions of OAR 734-51-0135(3), the Region Access Management Engineer may approve a deviation if:

(b) *The applicant provides a joint approach that serves two or more properties and results in a net reduction of approaches to the highway;*

**Response:** As a part of the access management plan for the SW Emigrant Avenue - SW Frazer Avenue couplet, several private accesses to individual properties will be consolidated along the couplet in the long-term. These properties will use these side-streets in order to access the couplet. These properties will be land locked if these local street accesses are not allowed.

(g) *Based on the Region Access Management Engineer's determination that:*

(B) *Approval does not compromise the intent of these rules as set forth in OAR 734-051-0020 (Which states: The purpose of division 51 rules is to provide a safe and efficient transportation system through the preservation of public safety, the improvement and development of transportation facilities, the protection of highway traffic from the hazards of unrestricted and unregulated entry from adjacent property, and the elimination of hazards due to highway grade intersections.)*

**Response:** The access management plan meets the intent of the Division 51 rules as it reduces vehicle turning conflicts within the interchange access management area, and protects the flow of highway traffic traveling to/from the by consolidating access points.

#### *Public Access to SW Frazer Avenue*

The access management plan for SW Frazer Avenue does not meet the access spacing requirement identified in OAR Division 51 and requires that the Region Access Management Engineer approve a deviation to the standards. Under the provisions of OAR 734-51-0135(3), the Region Access Management Engineer may approve a deviation if:

(a) *Adherence to spacing standards creates safety or traffic operation problems;*

**Response:** This access allows traffic to access SW Frazer Avenue from the I-84 Westbound ramp terminal. If this access is not in place then traffic will be diverted onto SW Court Avenue, which will increase congestion at the ramp terminal and the SW 20<sup>th</sup> Street/SW Court Avenue intersection.

#### *South Side Access Points*

##### *Public Access to SW Hailey Avenue*

The access management plan for SW Hailey Avenue/US 395 intersection does not meet the access spacing requirement identified in OAR Division 51 and requires that the Region Access Management Engineer approve a deviation to the standards. Under the provisions of OAR 734-51-0135(3), the Region Access Management Engineer may approve a deviation if:

(a) *Adherence to spacing standards creates safety or traffic operation problems;*

**Response:** Removing this access would force more traffic to utilize the signalized SW Hailey Avenue intersection, which would increase queuing and congestion at that intersection. It is

important that southbound traffic on US 395 does not queue back from this intersection through the I-84 Eastbound ramp terminal. Providing the right-turn in access here in its own lane removes southbound right-turning traffic from the southbound through lanes and reduces queues in those lanes.

*(c) The applicant demonstrates that existing development patterns or land holdings make joint use approaches impossible;*

**Response:** The Burger King property has no other options for reasonable access for US 395 traffic.

*(d) Adherence to spacing standards will cause the approach to conflict with a significant natural or historic feature including trees and unique vegetation, a bridge, waterway, park, archaeological area, or cemetery;*

**Response:** In order to meet the access spacing standard on the east side of US 395, the SW Tutuilla Creek Road intersection would need to be realigned and this realignment would impact the Olney Cemetery and other properties east of US 395.

*(g) Based on the Region Access Management Engineer's determination that:*

*(A) Safety factors and spacing significantly improve as a result of the approach; and*

**Response:** This approach is currently a full-access and this plan will restrict it to egress (right-in) only and, as mentioned above, will remove traffic from the southbound US 395 through lanes, which will reduce the likelihood of queues backing up to the ramp terminal.

*(B) Approval does not compromise the intent of these rules as set forth in OAR 734-051-0020 (Which states: The purpose of Division 51 rules is to provide a safe and efficient transportation system through the preservation of public safety, the improvement and development of transportation facilities, the protection of highway traffic from the hazards of unrestricted and unregulated entry from adjacent property, and the elimination of hazards due to highway grade intersections.)*

**Response:** This access management plan moves in the direction of Division 51 rules by restricting the approach to ingress (right-in) only in the long-term.

#### *Public Access to SW Hailey Avenue under Phase 3*

The access management plan for the SW Hailey Avenue realignment under Phase 3 does not meet the 1,320 feet access spacing requirement identified in OAR Division 51 and requires that the Region Access Management Engineer approve a deviation to the standards. Under the provisions of OAR 734-51-0135(3), the Region Access Management Engineer may approve a deviation if:

*(b) The applicant provides a joint approach that serves two or more properties and results in a net reduction of approaches to the highway;*

**Response:** The location of this access will provide public access to numerous residential and commercial properties, while consolidating a number of existing private accesses to US 395.

(g) Based on the Region Access Management Engineer's determination that:

(A) Safety factors and spacing significantly improve as a result of the approach; and

**Response:** This plan greatly increases the spacing from the I-84 Eastbound ramp terminal to the first full access on the west side of US 395. Currently, SW Hailey Avenue has a full signalized access approximately 200 feet from the ramp terminal and this plan will move in the direction of the standard and increase that spacing by approximately 800 feet. Relocating the SW Hailey Avenue approach also allows for more green-time to be provided to US 395 at the SW Tutuilla Creek Road intersection, which will reduce the likelihood of queues backing up from that intersection on US 395 through the ramp terminal. There are also currently a number of full access points on this area of US 395 that will move in the direction of being consolidated to this access approach in the long-term.

(B) Approval does not compromise the intent of these rules as set forth in OAR 734-051-0020 (Which states: The purpose of Division 51 rules is to provide a safe and efficient transportation system through the preservation of public safety, the improvement and development of transportation facilities, the protection of highway traffic from the hazards of unrestricted and unregulated entry from adjacent property, and the elimination of hazards due to highway grade intersections.)

**Response:** This access management plan moves in the direction of the Division 51 rules by increasing the spacing to the first full signalized access on the west side of US 395.

#### *Public Access to SW Tutuilla Creek Road under phases 2 and 3*

The access management plan for SW Tutuilla Creek Road does not meet the 1,320 feet access spacing requirement identified in OAR Division 51 and requires that the Region Access Management Engineer approve a deviation to the standards. Under the provisions of OAR 734-51-0135(3), the Region Access Management Engineer may approve a deviation if:

(d) Adherence to spacing standards will cause the approach to conflict with a significant natural or historic feature including trees and unique vegetation, a bridge, waterway, park, archaeological area, or cemetery;

**Response:** In order to meet the access spacing standard on the east side of US 395, the SW Tutuilla Creek Road intersection would need to be realigned and this realignment would impact the Olney Cemetery and other properties east of US 395.

**Section 8**  
Implementation Plan

## Implementation Plan

This section describes the IAMP implementation strategy, which includes an I-84/US 395 Interchange Function and Policy Definition and Overlay District. The Implementation Plan also includes adoption and monitoring procedures that will ensure transportation improvements are constructed and funded as development occurs and that the improvement plan and financing mechanisms are updated as needed over time.

To ensure that the IAMP remains dynamic and responsive to changes to the adopted land use and transportation plans, the City of Pendleton and ODOT should, at a minimum:

- Amend the City's Transportation System Plans and Comprehensive Plans;
- Amend the Oregon Highway Plan (OHP);
- Codify and map an Interchange Area Overlay District that defines the area wherein regulations and requirements associated with protecting the interchange apply;
- Coordinate planning activities per the Transportation Planning Rule (OAR 660-012);
- Review the IAMP and mobility standards for the interchange prior to adopting local plan amendments;
- Regularly revisit transportation funding strategy

## PLAN ELEMENTS

In addition to adoption of the IAMP described in Section 7, implementation of the I-84/US 395 IAMP requires adoption of an "Interchange Function and Policy Definition" and Interchange Management Area Plan Overlay District.

### ***Interchange Function and Policy Definition***

The I-84/US 395 interchange is an urban interchange that connects US 395, a statewide highway and freight route, with I-84. It is one of five interchanges serving Pendleton. US 395 serves as a major connection between the north and south sides of the Pendleton community. US 395 is a five-lane facility through the I-84 interchange area and then transitions into a couplet facility north of the freeway comprised of SW Frazer and SW Emigrant Avenues. This couplet provides access to downtown Pendleton. Much of the traffic flow in this area is focused on the SW Emigrant Avenue/SW 20<sup>th</sup> Street intersection, with traffic coming to and from the couplet of SW Court Avenue and SW Dorion Avenue and US 30 (Westgate Avenue). These roads also provide access to downtown, as well as to the Eastern Oregon Correctional Facility, Eastern Oregon Regional Airport at Pendleton, and other industrial and residential areas. The couplet also connects to OR 11, which travels north into Milton-Freewater, Oregon and Walla Walla, Washington. To the south, US 395

serves commercial uses and connections to residential areas before continuing south through the communities of John Day and Burns.

The City of Pendleton should adopt a clear definition of the I-84/US 395 Interchange function into its comprehensive plan and TSP as a policy to provide direction for management of the interchange area and achieve the objectives and goals of this IAMP. This will help to ensure consistency between future policy decisions with the interchange's intended function.

Following is the function and policy definition for the I-84/US 395 Interchange:

*"The transportation function of the I-84/US 395 Interchange is principally to provide safe and efficient access to downtown Pendleton and the residential and commercial areas south of I-84, including local traffic traveling between these two areas. In addition to this primary function, the I-84/US 395 Interchange remains an important facility for accessing the Eastern Oregon Correctional Facility, Blue Mountain Community College, and the residential areas north of downtown. The interchange also serves regional traffic coming from/going to US 395 south of Pendleton, and OR 11 and OR 37 north of downtown."*

### **Interchange Area Management Plan Area Overlay District**

To ensure the continued operational and safety integrity of the interchange, the City of Pendleton should adopt an Interchange Area Management Plan Overlay District<sup>1</sup>. Future development and land use actions within the Overlay District will be monitored to ensure that within the Interchange Area Management Plan Overlay District volume-to-capacity (v/c) ratios do not worsen operations beyond 0.86 along US 395 from the I-84 Westbound ramp terminal to the realigned SW Hailey Avenue intersection. This value is chosen since it is the highest shown along the corridor in Section 6. This can be accomplished through the IAMP Monitoring and Development Review Guidelines for the Overlay District included within the amendments to the City's Land Use and Development Ordinances and described in the following sections (*see the Technical Appendix for more information*).

## **ADOPTION ELEMENTS**

Implementation of the I-84/US 395 IAMP will occur at several levels of government. As required by OAR 734-051, the City of Pendleton will be required to amend its Transportation System Plan and Comprehensive Plan to incorporate elements of the I-84/US 395 IAMP. In addition, new ordinances or amendments to existing ordinances, resolutions, and Inter-Governmental Agreements (IGA) will be required to insure that the access management, land use management, and coordination elements of the IAMP are achieved. This adoption process will include Planning Commission/City Council hearings. Following successful adoption at the city level, the I-84/US 395 IAMP will be presented to the Oregon Transportation Commission (OTC) for its review and adoption. This should occur prior to transportation improvements as described in this IAMP being constructed.

---

<sup>1</sup> The Interchange Area Management Overlay District coincides and is consistent with the Interchange Management Study Area in the IAMP.

To implement the I-84/US 395 IAMP, the following actions shall occur:

1. The City of Pendleton shall adopt the I-84/US 395 IAMP as part of the City of Pendleton Transportation System Plan and Comprehensive Plan. The IAMP shall serve as the long range comprehensive management plan for providing the transportation facilities that are specifically addressed in this plan, as well as the Access Management Plan and the planned local street network for the area.
2. The City of Pendleton shall amend its Comprehensive Plan Map and Zoning Map to include the Interchange Area Management Plan Overlay District boundary. In addition, the City shall amend the Land Use and Development Ordinance to include an Interchange Area Management Plan Overlay District chapter that contains development and land use application requirements pertaining to transportation impact analysis, access management, and agency coordination.
3. ODOT Regional Access Management Engineer will review and approve the access deviations described in the IAMP.
4. The Oregon Transportation Commission shall amend the Oregon Highway Plan to include the I-84/US 395 IAMP.
5. The City of Pendleton and ODOT shall enter into an IGA to assign funding responsibility to the respective transportation improvement plan and to establish agreements on how the IAMP and its triggers will be monitored.

### **TSP and Comprehensive Plan Amendments**

The following outline discusses the major Transportation System Plan amendments that will need to occur at the city and state levels to support adoption of the I-84/US 395 IAMP.

#### **City of Pendleton**

- The City shall adopt the I-84/US 395 Interchange Area Management Plan by reference as an element of the City's Transportation System Plan.

The following interchange policy statements shall be included in the City of Pendleton Transportation System Plan:

*"The transportation function of the I-84/US 395 Interchange is principally to provide safe and efficient access to downtown Pendleton and the residential and commercial areas south of I-84, including local traffic traveling between these two areas. In addition to this primary function, the I-84/US 395 Interchange remains an important facility for accessing the Eastern Oregon Correctional Facility, Blue Mountain Community College, the residential areas north of downtown, and the planned relocation of St. Anthony Hospital. The interchange also serves regional traffic coming from/going to US 395 south of Pendleton, and both OR 11 and OR 37 north of downtown."*

*“The City shall establish an Interchange Overlay District (IOD) to ensure that the impacts of future development within the vicinity of the interchange are consistent with its intended function and the long-range plan for this facility, as documented in the adopted I-84/US 395 Interchange Area Management Plan. While it is recognized that proposed development outside of the adopted IOD also may be required to document expected impacts to the interchange, the City shall adopt specific requirements for development proposed within the IOD to ensure that direct impacts to the interchange are anticipated and, if necessary, mitigated.”*

- The IAMP Transportation Improvement Plan, as illustrated in Figures 7-1 through 7-3 and listed in Table 7-1, for City facilities shall be included in the transportation improvements project list of the Transportation System Plan.
- The IAMP Access Management Plan elements, as illustrated in Figures 7-4 and 7-5, for City facilities shall be included in the transportation improvements project list of the Transportation System Plan
- The extension of SW 30<sup>th</sup> Street to Tutuilla Road as described in Section 6 and illustrated in Figure 8-1 shall be included in the transportation improvements project list of the Transportation System Plan.
- A new north-south crossing of I-84 west of US 395, as shown under Concept W1 and described in Section 6, shall be included in the transportation improvements project list of the Transportation System Plan

### **Oregon Transportation Commission**

- The I-84/US 395 IAMP shall be adopted by the Oregon Transportation Commission as part of the Oregon Highway Plan.
- The IAMP Transportation Improvement Plan, as illustrated in Figures 7-1 through 7-3 and listed in Table 7-1, for state facilities shall be adopted as part of the facility plan amendment to the Oregon Highway Plan.
- The IAMP Access Management Plan elements, as illustrated in Figures 7-4 and 7-5, for state facilities shall be adopted as part of the facility plan amendment to the Oregon Highway Plan.
- The alternative mobility standard of a volume-to-capacity (v/c) ratio of 0.86 along US 395 from the I-84 Westbound ramp terminal to the realigned SW Hailey Avenue intersection shall be adopted as part of the facility plan amendment to the Oregon Highway Plan.

### **Other City Amendments**

The following outlines other major amendments that will need to occur at the city level to support adoption of the I-84/US 395 IAMP.

- The City shall adopt an Interchange Area Management Plan Overlay District that includes the submittal requirements, review standards, and administration fees for IAMP monitoring and updates for land use amendment and design review applications within the district.

H:\profile\G... - I-84 US 395 IAMP\Drawings\0216-1.dwg Nov 08, 2010 - 10:01am - nfoster Layout Tab: 01

## IMPLEMENTATION ELEMENTS

The implementation of each phase of the Transportation Improvement Plan shown in Figures 7-1 through 7-3 should be based on operational and safety triggers. Table 8-1 summarizes these implementation triggers, which should be included in the Intergovernmental Agreement between ODOT and the City, described below.

**TABLE 8-1 IMPLEMENTATION TRIGGERS**

Phase	Trigger
Phase 1	The 95 <sup>th</sup> -percentile northbound left-turn queue at the existing SW Emigrant Avenue/SW 20 <sup>th</sup> Street intersection backs past the I-84/US 395 Westbound ramp terminal <sup>1</sup> .
Phase 2	The 95 <sup>th</sup> -percentile southbound left-turn queue at the US 395/SW Hailey Avenue-SW Tutuilla Creek Road intersection spills into the US 395 through lanes and backs up into the I-84/US 395 Eastbound ramp terminal.
Phase 3	The 95 <sup>th</sup> -percentile southbound left-turn queue at the US 395/SW Hailey Avenue-SW Tutuilla Creek Road intersection spills into the US 395 through lanes and backs up into the I-84/US 395 Eastbound ramp terminal (after Phase 2 is constructed).

<sup>1</sup>This currently occurs during the 30<sup>th</sup> highest hour

## MONITORING ELEMENTS

The purpose of the IAMP is to ensure that capacity at the interchange is preserved for its intended function. The IAMP needs to remain dynamic and responsive to development and changes to the adopted land use and transportation plans. To accomplish this goal, monitoring should be agreed upon by the City of Pendleton and ODOT in an Intergovernmental Agreement (IGA) identifying triggers for reviewing the IAMP and how development within the Overlay District will be reviewed and coordinated with all parties.

### ***Intergovernmental Agreement (IGA)***

To ensure that the I-84/US 395 IAMP continues to preserve operational integrity and safety of the I-84/US 395 Interchange, the City of Pendleton and ODOT will develop an IGA stipulating each agency's funding obligations to the transportation improvements in the Plan and to the following monitoring and update program:

- The agencies will review the IAMP pursuant to the "review triggers" described below to ensure that the original assumptions and recommendations regarding the interchange, local circulation system, funding obligations, access management, land use management, and coordination efforts are still appropriate and effective given the current and projected future conditions inside the interchange management area. This review should be conducted through a meeting initiated by the City of Pendleton or ODOT and should include all affected agencies.
- In addition to the established triggers for IAMP review, the agencies can request a review of the IAMP at any time if, in their determination, specific land use or transportation changes warrant a review of the underlying assumptions and/or recommendations within the IAMP.

- If the participants in the IAMP review meeting agree that, once the impacts of the “trigger” that necessitated the review are examined, an IAMP amendment is not warranted, a recommendation of “no action” may be documented and submitted in the form of a letter to the City of Pendleton City Council and the Oregon Transportation Commission.
- If the findings and conclusions from the IAMP review meeting demonstrate the need for an update to the plan, review participants will initiate an IAMP update process. Initial steps in updating the IAMP will include scoping the planning process, identifying funding, and outlining a schedule for plan completion. Once completed, IAMP updates will be required to be legislatively adopted, requiring a City Council public hearing and an Oregon Transportation Commission hearing, as an amendment to the City of Pendleton Transportation System Plan and as an update to the Oregon Highway Plan.

### IAMP Review Triggers

Periodically, the implementation program shall be evaluated to ensure it is accomplishing the goals and objectives of the IAMP. Events that will trigger an IAMP review include:

- Every fifth year from the date of IAMP adoption or latest update.
- Plan map and zone changes that have a “significant affect” per the Transportation Planning Rule<sup>2</sup> and impact the I-84/US 395 Interchange, or that are located within the IMSA.
- The 95<sup>th</sup>-percentile northbound left-turn queue at the existing SW Emigrant Avenue/SW 20<sup>th</sup> Street intersection backs past the I-84/US 395 Westbound ramp terminal.
- The 95<sup>th</sup>-percentile southbound left-turn queue at the US 395/SW Hailey Avenue-SW Tutuilla Creek Road intersection spills into the US 395 through lanes and backs up into the I-84/US 395 Eastbound ramp terminal.
- Mobility measures at the I-84 ramp terminals exceed the adopted alternative mobility standard of a volume-to-capacity ratio of 0.86 along US 395 from the I-84 Westbound ramp terminal to the realigned SW Hailey Avenue intersection.

### **Development Review within the Overlay District**

The following outlines the transportation requirements for development and zone change applications within the I-84/US 395 Interchange Overlay District and describes how the City of Pendleton and ODOT should coordinate. The intent of the overlay district and associated transportation requirements is to allow the City and development within the District to rely upon the planning work completed for the IAMP that identifies the transportation needs in the area and utilize a streamlined development review process requiring limited additional transportation analysis if the development is consistent with the Plan.

---

<sup>2</sup> Plan map or zone changes that result in equal or less trips than would be generated by approved uses under the current designation would not have a “significant affect.”

### Transportation Assessment Report

For all development applications located within the I-84/US 395 Interchange Overlay District, the applicant shall prepare and submit to the City a Transportation Assessment Report that documents the following:

- a) Expected weekday p.m. peak hour trip generation.
- b) Identifies how the development complies with the IAMP and what off-site improvements will be constructed as part of the development.
- c) Reviews proposed site-access driveways and streets to ensure compliance with the IAMP Access Management Plan and that adequate intersection sight distance and traffic control will be provided.
- d) Reviews on-site parking and circulation plan to ensure safe and efficient travel for all modes of travel and includes AutoTurn analyses for anticipated trucks and emergency service vehicles.

### Transportation Impact Study

All development applications located within the I-84/US 395 Interchange Overlay District that meet the following conditions are required to prepare and submit a Transportation Impact Study (TIS) to demonstrate the level of impact of the proposed development on the surrounding street system:

- a) A zone change and/or comprehensive amendment that results in an increase in trips as compared to allowed uses under the existing designation.

The determination of impact or effect, and the scope of the TIS, shall be coordinated with the City of Pendleton and ODOT. The TIS shall also document all elements required as part of the Transportation Assessment Report (see above). The developer shall be required to mitigate impacts attributable to the project.

### ODOT Coordination

- The City shall not deem the land use application complete unless it includes a Transportation Assessment Report or, if required, a TIS prepared in accordance with the requirements as described above.
- The City shall provide written notification to ODOT once the application is deemed complete. This notice shall include an invitation to ODOT to participate in the City's site team review meeting (Pursuant to the city's Pre-Application Requirements).
- ODOT shall have at least 20 days, measured from the date notice to agencies was mailed, to provide written comments to the City. If ODOT does not provide written comments during this 20-day period, the City staff report will be issued without consideration of ODOT comments.

### Administration Fee

The City of Pendleton should set and require an administration fee for IAMP monitoring and updates for all site plan review applications within the Overlay District.

**Section 9**  
OAR and OHP  
Compliance

## OAR and OHP Compliance

The following section discusses the Oregon Administrative Rule (OAR) and 1999 Oregon Highway Plan (OHP) policy based compliance issues that pertain to the development of the I-84/US 395 IAMP.

### OAR COMPLIANCE

The I-84/US 395 IAMP was developed in collaboration with the City of Pendleton and ODOT and was developed in accordance with the guidelines set forth in the State of Oregon's Oregon Administrative Rules for Interchange Access Management Planning and Interchange Area Management Planning. Table 9-1 identifies the required planning elements from OAR 734-051 and documents how the I-84/US 395 IAMP satisfies the requirements.

**TABLE 9-1 OAR 734-051 ISSUES ADDRESSED**

<b>OAR 734-0051-0155 Requirement</b>	<b>How Addressed</b>	<b>Report Reference</b>
Should be developed no later than the time the interchange is being developed or redeveloped -0155(7)(a)	This plan was developed in order to determine the future improvements that would enhance the efficiency and safety of the interchange. The plan was completed before any of the identified improvements to the interchange moved into project development phases.	Section 1
Should identify opportunities to improve operations and safety in conjunction with roadway projects and property development or redevelopment and adopt strategies and development standards to capture those opportunities -0155(7)(b)	The access management and overlay district elements identified in this plan will result in operational and capacity improvements.	Section 7 Section 8
Should include short, medium, and long-term actions to improve operations and safety in the interchange area -0155(7)(c)	The IAMP includes a phasing plan for the transportation system improvements and access management elements that cover the short, medium, and long-term timeframes.	Section 7 Section 8
Should consider current and future traffic volumes and flows, roadway geometry, traffic control devices, current and planned land uses and zoning, and the location of all current and planned approaches -0155(7)(d)	A full analysis of existing and forecast (2030) operational and geometric conditions was conducted for this planning effort. The Pendleton travel demand model was updated to include the most current planned land uses. All approaches, existing and planned, were examined.	Section 4 Section 5 Section 6
Should provide adequate assurance of the safe operation of the facility through the design traffic forecast period, typically 20 years -0155(7)(e)	The forecast analysis shows that safe operations will be achieved for the interchange through 2030.	Section 6
Should consider existing and proposed uses of all property in the interchange area consistent with its comprehensive plan designations and zoning -155(7)(f)	A thorough analysis of surrounding land uses and land use potential was performed. This analysis led to an update of the Pendleton travel demand model to include the most current planned land uses.	Section 4 Section 5 Section 6 Section 7

OAR 734-0051-0155 Requirement	How Addressed	Report Reference
Is consistent with any applicable Access Management Plan, corridor plan or other facility plan adopted by the Oregon Transportation Commission-0155(7)(g)	The I-84/US 395 Interchange Area Management Plan is consistent with the 1999 OHP. (See following subsection). No other applicable plans adopted by the OTC were identified.	Section 3 Section 8
Includes polices, provisions and standards from local comprehensive plans, transportation system plans, and land use and subdivision codes that are relied upon for consistency and that are relied upon to implement the Interchange Area Management Plan.  -155(7)(h)	Implementation of the IAMP is reliant upon the City of Pendleton amending its Transportation System Plan to incorporate the transportation improvements associated with the IAMP. In addition, implementation of the IAMP will occur through the City of Pendleton amending the Land Use and Development Ordinance to include an IAMP overlay district. The overlay district contains the submittal requirements and review standards for land use amendment and development proposals within the district; access management standards and local street connectivity requirements will be based on the IAMP.  Amendments will ensure that future development and land use actions within the interchange management area do not degrade the interchange terminal volume to capacity ratios below the adopted alternate mobility standards. These amendments include coordination between agencies, traffic impact analysis requirements, monitoring of traffic operations, and access management requirements.	Section 3 Section 7 Section 8

THE PLAN WILL DETERMINE		
OAR 734-051-0155 Requirement	Determination	Report Reference
Driveway and roadway spacing and connections	The operational analysis considered all access points and intersections within approximately ½ mile from the existing I-84/US 395 Interchange, including all key intersections that have potential to affect traffic operations in the interchange area over the planning period. The resulting Access Management element moves toward the ¼ mile spacing requirement.	Section 7
Local street connections to ensure adequate access to properties and off-highway circulation	The IAMP maintains much of the existing local circulation network and includes improvements to it (Figures 7-1 through 7-3 and 8-1).	Section 7 Section 8
Median treatments	Median treatments are proposed for US 395 and SW 20 <sup>th</sup> Street to meet ODOT access management standards (Figures 7-4 and 7-5).	Section 7
Location and type of traffic control devices needed to ensure safe and efficient operations in the operational area of the interchange	The I-84 Westbound ramp terminal will be signalized in Phase 1. Figures 7-1 through 7-3 show all necessary traffic control within the IMSA.	Section 7
Location of sidewalks and bicycle lanes	Sidewalks and bicycle lanes will be constructed with roadway improvements. Figures 7-1 through 7-3 show the locations of future sidewalks and bicycle lanes.	Section 6 Section 7
Sidewalk and bicycle lane crossings (highway and ramp crossings)	See above.	See above

<b>THE PLAN WILL DETERMINE</b>		
<b>OAR 734-051-0155 Requirement</b>	<b>Determination</b>	<b>Report Reference</b>
Location of potential transit facilities (turnouts, shelters, park and ride areas)	Transit facilities were not considered as part of the IAMP because fixed route transit service does not exist nor is planned within the IMSA.	NA
Is new policy language needed in the City of Pendleton Comprehensive Plan to support adequate long-term interchange operations?	The City of Pendleton will amend its comprehensive plan to include the overlay district. In addition, the City will amend its land use and development ordinance to implement the overlay district.	Section 8
Are any land use changes/comprehensive plan (including TSP) amendments needed to implement the Interchange Area Management Plan?	<p>The City of Pendleton will amend its Transportation System Plan to incorporate the transportation improvements associated with the IAMP.</p> <p>The City of Pendleton will amend the Land Use and Development Ordinance to include an Interchange Area Management Plan Overlay District that contains the submittal requirements and review standards for land use amendment and development proposals within the district.</p> <p>Amendments will ensure that future development and land use actions within the interchange management area do not degrade the interchange terminal volume to capacity ratios below the adopted alternate mobility standards. These amendments include coordination between agencies, traffic impact analysis requirements, monitoring of traffic operations, and access management requirements.</p>	Section 8
Are any deviations from OHP and OAR 731-051 standards and requirements needed?	Deviations to the OHP access spacing standards are required, as described in Section 7. The Access Management element describes how each of the necessary deviations meets the requirements of Division 51. The IAMP and Implementation Plan define all the necessary standards and requirements.	Section 7 Section 8

## OREGON HIGHWAY PLAN COMPLIANCE

The I-84/US 395 IAMP was developed in accordance with the policies set forth in the Oregon Highway Plan (OHP). The following identifies the OHP policies that pertain to the I-84/US 395 IAMP and how the IAMP satisfies the requirements.

Policy 1A: State Highway Classification System. The state highway classification system includes five classifications: Interstate, Statewide, Regional, District, and Local Interest Roads. In addition, there are four special purpose categories that overlay the basic classifications: special land use areas, statewide freight route, scenic byways, and lifeline routes.

Within the IMSA, there are three ODOT highways. Interstate-84 is an Interstate Highway and is part of the National Highway System (NHS). US 395 is a statewide highway. OR 37 (the SW Emigrant Avenue-SW Frazer Avenue couplet) is a District Highway.

*How Addressed:* The I-84/US 395 IAMP recognized the respective functions of each highway. The north-south connection from Concept W1 that is to be included in the City's TSP will remove local traffic from US 395, helping it to better serve its function as a statewide highway and a freight route.

Policy 1B: Land Use and Transportation. This policy recognizes the role of both the State and local governments related to the state highway system and calls for a coordinated approach to land use and transportation planning.

*How Addressed:* The IAMP was developed through a cooperative planning effort between the City of Pendleton, ODOT, and DLCD. The IAMP will be implemented by the City of Pendleton through an Interchange Management Overlay District that will require coordinated agency review on all future development or land use actions within the District.

Policy 1C: State Highway Freight System. This policy recognizes the need for the efficient movement of freight through the state. Interstate-84 and US 395 are designated freight routes.

*How Addressed:* The transportation improvement plan improves traffic operations and safety along US 395 and at the interchange, which will ensure that freight mobility is preserved.

Policy 1F: Highway Mobility Standards Access Management Policy. This policy addresses state highway performance expectations, providing guidance for managing access and traffic control systems related to interchanges.

*How Addressed:* The I-84/US 395 IAMP demonstrates that the interchange will not meet ODOT mobility standards through the 20-year horizon and proposes alternate mobility standards. It also provides an access management element that improves access management within the IMSA.

Policy 1G: Major Improvements. This policy requires maintaining performance and improving safety by improving efficiency and management before adding capacity.

*How Addressed:* The I-84/US 395 IAMP provides measures to increase efficiency through access management and provides improvements to the local street system.

Policy 2B: Off-System Improvements. This policy recognizes that the state may provide financial assistance to local jurisdictions to make improvements to local transportation systems if the improvements would provide a cost-effective means of improving the operations of the state highway system.

*How Addressed:* The City of Pendleton and ODOT have met and discussed improvements to the local system and who will be responsible for these improvements. Specific access management responsibilities have been set according to State and City responsibilities.

Policy 2F: Traffic Safety. This policy emphasizes the state's efforts to improve safety of all uses of the highway system. Action 2F.4 addresses the development and implementation of the Safety Management System to target resources to sites with the most significant safety issues.

*How Addressed:* The potential safety issues identified within the IMSA relate to queues spilling back from other intersections into the ramp terminals. The transportation improvement plan outlined in Section 7 addresses these issues. The access management element was also developed to ensure the long-term safety of the interchange area.

Policy 3A: Classification and Spacing Standards. This policy addresses the location, spacing and type of road and street intersections and approach roads on state highways. The adopted standards can be found in Appendix C of the Oregon Highway Plan.

*How Addressed:* See Policy 3C below.

Policy 3C: Interchange Access Management Areas. This policy addresses management of grade-separated interchange areas to ensure safe and efficient operation between connecting roadways. Action items include developing interchange area management plans to protect the function of the interchange to provide safe and efficient operations between connecting roadways and to minimize the need for major improvements of existing interchanges. The local jurisdiction's role in access management is stated in Policy 3C as follows: "necessary supporting improvements, such as road networks, channelization, medians and access control in the interchange management area must be identified in the local comprehensive plan and committed with an identified funding source, or must be in place (Action 3C.2)."

Access management standards are detailed in Policy 3C and include the distance required between an interchange and approaches and intersections. The most stringent standards apply in interchange areas. Table 17 of the OHP contains the minimum spacing standards applicable to the I-84/US 395 Interchange, a freeway interchange that has a multi-lane crossroad. The spacing standards in an urban area for this type of interchange are:

1 mile (3.2 km)	Distance between the start and end of tapers of adjacent interchanges.
750 feet (230 m)	Distance to the first approach on the right (right in/right out only)
1,320 feet (400 m)	Distance to the first major intersection or approach (left turns allowed).
990 feet (300 m)	Distance between the last right in/right out approach road and the start of the taper for the on-ramp.

*How Addressed:* The I-84/US 395 IAMP includes an access management element that consolidates access points and improves access spacing over the existing conditions. Ultimately, upon land redevelopment, access on either side will be improved but it will not meet the standards outlined above. Section 7 outlines where deviations will be necessary and describes how each of the necessary deviations meets the requirements of Division 51.

Policy 4A: Efficiency of Freight Movement. This policy emphasizes the need to maintain and improve the efficiency of freight movement on the state highway system. Interstate-84 and US 395 are designated Freight Routes.

*How Addressed:* transportation improvement plan improves traffic operations and safety along US 395 and at the interchange, which will ensure that freight mobility is preserved.

Policy 5B: Scenic Resources. This policy applies to all state highways and commits the State to using best management practices to protect and enhance scenic resources in all phases of highway project planning, development, construction, and maintenance.

*How Addressed:* This policy was considered as part of the plan development.
