

# URBANISM NEXT | CONFERENCE

MARCH 5-7, 2018  
PORTLAND, OR

---

Emerging technologies — **autonomous vehicles (AVs), the sharing economy, and E-commerce** — are having profound effects not only on how we live, move, and spend our time in cities, but also increasingly on **urban form and development** itself.

Join planners, architects, landscape architects, developers, academics and many others as we come together for **presentations, sessions, and interactive workshops and charrettes** to learn about the secondary impacts of emerging technologies on land uses, urban design, transportation, and real estate markets and the implications of these changes for **equity, the environment, the economy, and governance**.
