

# The Integration of Serials Into Institutional Repositories

*presented at the 17<sup>th</sup> annual  
North Carolina Serials Conference  
April 11, 2008*

*Mary Grenci  
Interim Head & Serials Team Leader  
Metadata Services and Digital Projects  
University of Oregon Libraries  
[mgrenci@uoregon.edu](mailto:mgrenci@uoregon.edu)*

*Available online at:  
<https://scholarsbank.uoregon.edu/dspace/handle/1794/5914>*

# The main issues

- Placement of ***serial title*** in IR hierarchy
- Collection/community ***names***
- Organization of ***serial issues***
- Organization of ***issue content***
- Construction of ***item titles***

# Caveats

- Issues & choices tied to IR software
- Impacted by earlier decisions about overall IR organization, content & workflow
- Not a decision flowchart – many things must be considered at the same time
- ***There is no one correct answer!***

# Questions to think about

- What type of content is it?
- How will the content be used?
- Is order important?
- Are relationships between titles important?

# More questions to think about

- How much control **can** the IR manager have?
- How much control does the IR manager **want** to have?
- How do each of these questions relate to each of the main issues listed on Slide 2?
- ***Do you (does your institution) really care?***

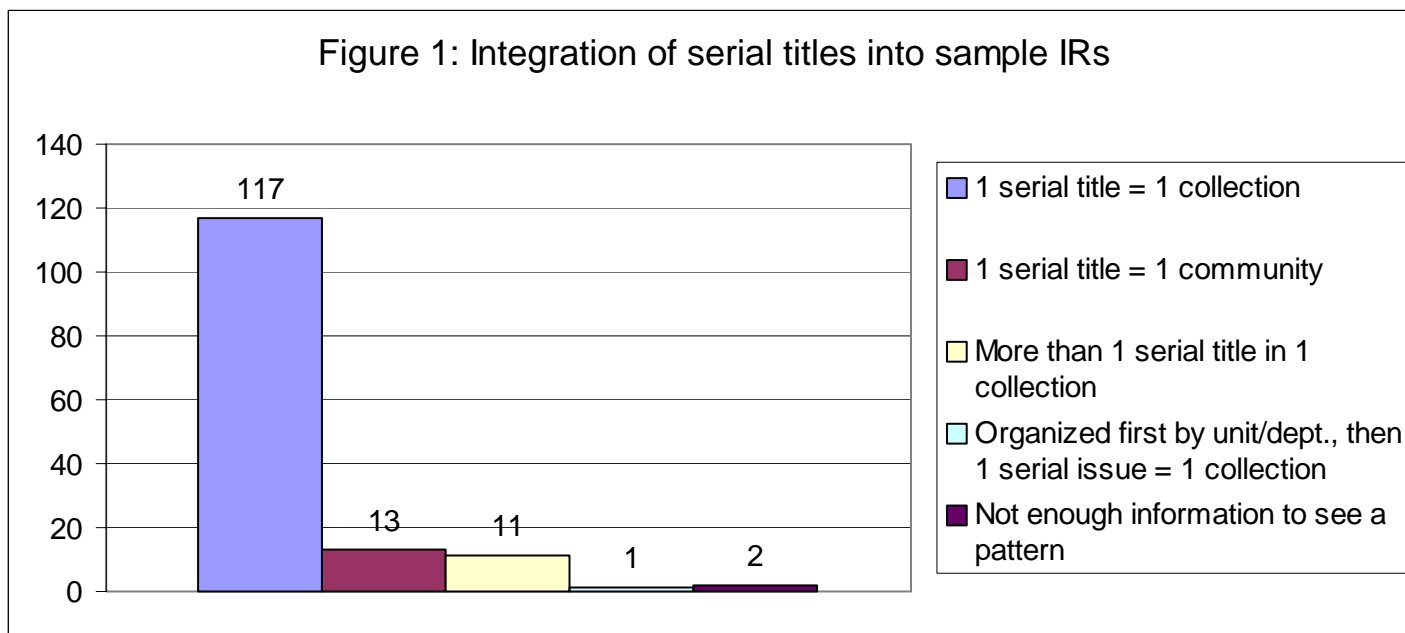

# Placement of *serial title* in overall IR hierarchy

- How is other IR content organized?
- Is the title related to already existing IR content?
  - Responsible body?
  - Related titles?
  - Topical relationship?
  - *Do any of these matter?*

# Placement of *serial title* in overall IR hierarchy

- Who is responsible for the serial?
- Are there related publications?
  - Also being placed in IR?
  - Not being added to IR now but may be later?
  - Never being added to IR?
- Is the title still being published?

# Findings of a study of 6 DSpace IRs, performed Aug.-Sept. 2007\*

# Community/collection *names*

- Effect on:
  - Item record title field
  - Display order
  - Title recognition/findability

# Community/collection *names*

- What will be included in the community/collection?
  - 1 serial title
  - Multiple titles, all related
  - Multiple titles, some not related
- Should the name reflect the contents? If yes, how?

## Community/collection *names*

- Is there a relationship with an already existing collection or community?
  - Responsible body?
  - Related title(s)?
- Can/should contextual information be added to the name? (e.g. publication dates)

## Community/collection *names*

- How will issues & issue content be organized?
- Is chronological order important?
  - At collection level?
  - At item level?
- Is the title still being published?

# Summary

- There are lots of things to think about when adding a serial run to an IR
- All the questions relate to each other
- Various institutions have chosen to do things in different ways
- ***There is no one true answer!***

## Note

- \* The study sample included the following IRs, in order by size according to ROAR (accessed: August 29, 2007):
  - University of Michigan's Deep Blue:  
<http://deepblue.lib.umich.edu/index.jsp>
  - Ohio State University's Knowledge Bank:  
<https://kb.osu.edu/dspace/index.jsp>
  - Georgia Tech's SMARTech: <http://smartech.gatech.edu/>
  - Cornell University's eCommons@Cornell:  
<http://ecommons.library.cornell.edu/index.jsp>
  - Oregon State University's ScholarsArchive@OSU:  
<http://ir.library.oregonstate.edu/dspace/index.jsp>
  - University of Oregon's Scholars' Bank:
