INTRODUCTION

This report presents the results of the 1987 Vacant Land Inventory. This inventory was based on the Multnomah County Assessment and Taxation data file. Unlike previous inventories, no field work was conducted. The use of the Assessment and Taxation file significantly reduced cost and allowed access to all the information in the file. Although this data file provided the best available information as of June 1987, some property included in the inventory may have been developed since the time of its use.

The 1987 Vacant Land Inventory updates the City's Comprehensive Plan vacant land inventory through June 1987 to provide a current data base and to address new requirements adopted by the Land Conservation and Development Commission since Portland's Plan was acknowledged in 1981. The inventory update is required as part of the first periodic review of Portland's Plan to comply with new administrative rules for Statewide Planning Goal 9, Economy of the State; Goal 10, Housing; and Goal 11, Public Facilities and Services.

Methodology and maps of the 1987 Vacant Land Inventory are presented in:
1987 Vacant Land Inventory Methodology Report (1988)
1987 Vacant Land Inventory Map Atlas

This report consists of four sections and an appendix. Section I explains the methodology used for the vacant land analysis. Section II presents an overview of vacant land results. Section III provides residential vacant land results. Section IV provides industrial and commercial vacant land results. The appendix includes computer printouts used in preparing the report tables.

SECTION I: METHODOLOGY

1987 Vacant Land Inventory Methodology

In 1987, the City conducted a new vacant land inventory. The Multnomah County Assessment and Taxation (A & T) data file served as the data base for the inventory, which included the entire Urban Services Boundary area. All tax accounts within the Urban Services Boundary area where the parcel size was 2,000 square feet or greater and where no value was given for improvements were included in the 1987 Vacant Land Inventory. The data base also included tax accounts where the parcel size was 2,000 square feet or greater and where no value was given for improvements in the West Hills Natural Resource area adjacent to the Urban Growth Boundary. Some property in this area is within the Portland City limits.

Based on the legal description from the A & T account, each parcel was mapped on 1".= 200' quarter-section zoning maps. These maps are the 1987 Vacant Land Inventory Map Atlas. As the parcels were mapped, a coding sheet was completed for each parcel, for use in the computer analysis. The data included on the coding sheets are the 1987 Vacant Land Inventory Data File.

The following information is included in the 1987 Vacant Land Inventory Data File: tax account number; quarter-section number; parcel ID number; city limits or unincorporated area; size of parcel; Plan Map designation; zone; overlay zone; neighborhood ID code; industrial district ID code; hazard area information and floodplain information.

Additional detail on the 1987 Vacant Land Inventory methodology is provided in *1987 Vacant Land Methodology* (1988).

Vacant Land Analysis Methodology

The 1987 vacant land analysis was derived from the 1987 Vacant Land Inventory. To determine buildable lands, parcels smaller than the minimum lot size for existing lots were eliminated.

This resulted in the elimination of undersized parcels as follows:

FF and comparable County zones:	less than 43,560 square feet
R20 and comparable County zones:	less than 14,000 square feet
R10 and comparable County Zones:	less than 7,000 square feet
R7 and comparable County Zones:	less than 5,000 square feet
R5 through R1 and comparable County zones:	less than 3,750 square feet.

There is no minimum lot size in City RH, RX, commercial or industrial designations and comparable Multnomah County zones. For these designations, all vacant parcels were included in the vacant land analysis.

Of the remaining land, parcels located in whole or in part within a hazard area or floodplain were separated from land without development constraints. Parcels meeting the minimum lot size and without development constraints are considered "buildable".

The methodology used in the 1987 vacant land analysis results in a conservative estimate of buildable land, since development can occur on undersized parcels, in hazard areas and within floodplains. This methodology is consistent with that used at Plan acknowledgment and with the requirements of administrative rules for Statewide Planning Goals 9 and 10.

Where property that had been annexed to the City retained County zoning at the as of November 1987, the date of the Vacant Land Inventory Maps, the County zone was listed on the inventory coding sheet. For purposes of the vacant land analysis, totals for County zones are included with the equivalent City Plan Map designation and zone, as determined by the Portland/Multnomah County Zone Conversion Chart.

City Plan Map designations/zones and comparable Multnomah County zones are:

<u>City Plan Map Designation/Zone</u>	<u>County Zones</u>
FF	LR40, MUF19, UF10, UF20
R20	LR20
R10	LR10, R10
R7	LR7, R7, R7.5
R5	LR5, TLR5
R3	MR3, MR4
R2	HR2, TMR
R1	HR1
RH	THR
C5	BPO, TO
C4	SC
C3	TNC
C2	EC, GC, NC
GE	TLM
GI	GM, LM
HI	HM

The Vacant Land Inventory Data File was keypunched onto magnetic tape. This tape was loaded into the City's VAX computer and downloaded to a Macintosh Plus computer for tabulation and analysis of the results. The vacant land analysis was conducted on the Bureau of Planning Macintosh Plus computer system using the following software programs: Reflex Plus by Borland International; MyStat by SYSTAT, Inc.; and Excel by Microsoft.

SECTION II: OVERVIEW OF VACANT LAND RESULTS

Based on the 1987 vacant land analysis, 11,818 vacant parcels and 15,218.35 vacant acres were located within the City of Portland and within the Urban Growth Boundary as of June 30, 1987. An additional 10 vacant parcels and 359.10 vacant acres were located within the City of Portland in the Natural Resource area adjacent to the Urban Growth Boundary. A total of 1,404 vacant parcels and 2,768.40 vacant acres were located in unincorporated Multnomah County within Portland's Urban Services Boundary area.

Of the 11,818 vacant parcels within the City of Portland and within the Urban Growth Boundary, 2,736 (23%) were located in whole or in part within a hazard area or floodplain. The remaining 9,083 (77%) showed no hazard area or floodplain constraints. Vacant acreage, however, was almost evenly divided between land located in whole or in part within a hazard area or floodplain and land without these constraints. Slightly over one-half, 7,707.35 acres, had hazard area or floodplain constraints and slightly under one-half, 7,511.00 acres, did not have these development constraints.

Compliance with the Statewide Planning Goals and their administrative rules is based on development allowed under the Comprehensive Plan Map. Portland's acknowledged Comprehensive Plan includes both a Comprehensive Plan Map and a Zoning Map. The Comprehensive Plan Map shows the type, density and location of land development and redevelopment permitted over the Plan's twenty-year timeframe. The Zoning Map shows the type, density and location of land development and redevelopment currently permitted. Downzonings required to implement the Comprehensive Plan Map were adopted concurrent with Plan adoption. Because services were not adequate at time of Plan adoption to support upzoning to the full intensity/density of development allowed under the Plan Map, upzonings were not adopted concurrent with Plan adoption, but were deferred for review on a case-by-case basis.

The tables in this section present data on vacant land by general categories for Plan Map designations and zones. Six general categories are used: open space; farm/forest; single family; attached single family and multi-family; commercial; and industrial. Currently, there is no zone comparable to the Comprehensive Plan Map Open Space designation; Open Space designated property is zoned based on the zoning of adjacent property.

Table 3 is a summary of vacant land by Comprehensive Plan Map category for all parcels in the City of Portland within the Urban Services Boundary. Table 4 is a summary of vacant land by Zoning Map category, with property designated Open Space on the Plan Map included within the zoning categories. Table 5 is a summary of vacant land by Zoning Map category, with property designated Open Space on the Plan Map reported as a separate category. Since both Tables 3 and 5 report Open Space as a separate category, they provide parallel information on vacant land in the remaining Comprehensive Plan Map and Zoning Map categories.

Excluding parcels designated Open Space on the Comprehensive Plan Map, there were 1,584 parcels and 1,492.43 acres of vacant land where the Comprehensive Plan Map designation differed from the zone. Under Comprehensive Plan Policy 10.7, these parcels can be upzoned to the Comprehensive Plan Map designation based on the adequacy of services to support the maximum intensity/density allowed by the Plan Map. Table 6 reports the number of parcels and acres where the Plan Map designation differs from the zone.

Information on vacant land by Comprehensive Plan Map category is provided in Tables 7 through 9. Table 7 is a summary table showing parcels and acres by category with hazard/flood constraints, without hazard/flood constraints and total parcels and acres. Table 8 provides information on parcels and acres by category without hazard/flood constraints; while Table 9 provides information on parcels and acres by category with hazard/flood constraints.

Information on vacant land by Zoning Map category is provided in Tables 11 through 13. The format is similar to Tables 7 through 9. Table 11 is a summary table showing parcels and acres by category with hazard/flood constraints, without hazard/flood constraints and total parcels and acres. Table 12 provides information on parcels and acres by category without hazard/flood constraints; while Table 13 provides information on parcels and acres by category with hazard/flood constraints. Property designated Open Space on the Comprehensive Plan Map are included with the zoning category on these tables, so the data is not directly comparable to that presented in Tables 7 through 9.

Table 1
1987 Vacant Land Inventory
Summary of Vacant Land by Area

Vacant Land Within the City of Portland*

<u>Area</u>	<u>Parcels</u>	<u>Acres</u>
Within Urban Services Boundary	11,818	15,218.35

* Property designated Open Space on the Comprehensive Plan Map is included within the zoning categories

SECTION III: RESIDENTIAL VACANT LAND

Based on the vacant land analysis, there were 8,027 vacant parcels and 6,636.90 vacant acres designated for residential use on the Comprehensive Plan Map as of June 30, 1987. This represents 68% of the total vacant parcels and 44% of the total vacant acres. Of this total, 6,147 vacant parcels and 4,058.98 vacant acres were located outside of hazard or floodplain areas.

Vacant land in detached single family Plan Map designations accounted for 6,042 of the total vacant parcels and 5,988.47 (39.35%) of the total vacant acres. These designations accounted for 4,255.49 of the vacant parcels and 3,532.98 (47.04%) of the vacant acres without hazard or floodplain constraints.

Table 13 details vacant land by Comprehensive Plan Map designation for detached single family Plan Map designations.

Vacant land in attached single family and multi-family Plan Map designations accounted for 1,985 of the total vacant parcels and 648.43 (4.26%) of the total vacant acres. These designations accounted for 1,786 of the vacant parcels and 526.00 (7.00%) of the vacant acres without hazard or floodplain constraints.

Table 14 details vacant land by Comprehensive Plan Map designation for attached single family and multi-family Plan Map designations.

Calculation of housing development potential on vacant land is based on the amount of buildable land, not total vacant land. In calculating this housing development potential, the same units-per-acre factors are used for periodic review as were used at Plan acknowledgment. In addition, 20% of buildable land is again subtracted in the R20, R10 and R7 designations to account for rights-of-way. Finally, 10% of the buildable land in the C2 designation and 5% of the buildable land in the M3 designation is again expected to be developed for multi-family housing.

As shown on Table 15, the Comprehensive Plan Map provided the potential for development of 32,745 new units on 3,484.43 acres of vacant buildable land. Of this total, 18,424 (56%) are attached single family and multi-family units and 14,321 (44%) are detached single family units. The overall density of new housing development on vacant buildable land is 9.4 dwelling units per net buildable acre.

Of the vacant buildable land designated single family or multi-family under the Plan Map, 15% is designated for attached single-family or multi-family development, with 85% designated for detached single family development. At Plan acknowledgment, 21.5% of the vacant buildable land designated single family or multi-family under the Plan Map was designated for attached single family or multi-family development, with 78.5% designated for detached single family.

Despite the annexations since 1981, the number of acres of vacant buildable land designated for attached single family or multi-family development under the Plan Map was only slightly greater in 1987 than it was at Plan acknowledgment, increasing from 492 acres to 526 acres. In contrast, the number of acres of vacant buildable land designated for detached single family development under the Plan Map almost doubled, increasing from 1,792 acres to 2,903 acres.

Table 16 shows housing development potential under the Zoning Map. Total housing development potential was lower under the Zoning Map than under the Comprehensive Plan Map, with a potential for 30,379 new units on 3,435.98 acres of vacant buildable land. This reflects the potential for upzoning on vacant buildable residential land documented in Table 6.

Of this total, 16,716 (55%) are attached single family and multi-family units and 13,659 (45%) are detached single family units. The overall density of new development is 8.8 dwelling units per net buildable acre. This is a lower percentage of attached single family and multi-family and a lower overall density for development on vacant buildable land than under the Comprehensive Plan Map.

R5: 24.88 acres	

SECTION IV: INDUSTRIAL AND COMMERCIAL VACANT LAND

Based on the vacant land analysis, there were 3,526 vacant parcels and 6,168.09 vacant acres designated for industrial or commercial use on the Comprehensive Plan Map as of June 30, 1987. This represents 30% of the total vacant parcels and 41% of the total vacant acres. Of this total, 2,791 vacant parcels and 2,609.80 vacant acres were located outside of hazard and floodplain areas.

Vacant land in commercial Plan Map designations accounted for 1,301 of the total vacant parcels and 436.18 (2.87%) of the total vacant acres. These designations accounted for 1,187 of the vacant parcels and 319.24 (4.25%) of the vacant acres without hazard or floodplain constraints.

Table 17 details vacant land by Comprehensive Plan Map designation for commercial Plan Map designations.

Vacant land in industrial Plan Map designations accounted for 2,225 of the total vacant parcels and 5,731.91 (37.66%) of the total vacant acres. These designations accounted for 1,604 of the vacant parcels and 2,290.56 (30.50%) of the vacant acres without hazard or floodplain constraints.

Table 18 details vacant land by Comprehensive Plan Map designation for industrial Plan Map designations.

Of the total vacant industrial and commercial land, 1,804 parcels and 5,451.57 acres were located within Portland's industrial districts. Table 19 provides a summary of vacant industrial and commercial land for nine City industrial districts: Albina; Brooklyn; Columbia CorridorWest; Columbia Corridor; Central Eastside; Guilds Lake; Linnton; Northwest Industrial; St. Johns; and Swan Island. For this report, the Columbia Corridor industrial district is divided into four subareas: Rivergate; West Columbia; Central Columbia; and Columbia South Shore. Vacant land data is presented for each of these subareas.

The largest amount of vacant parcels and vacant acres are included within the Columbia Corridor. Together, the four subareas include 1,108 vacant parcels and 4,707.67 vacant acres. This represents 61% of the total vacant parcels and 86% of the total vacant acres within the industrial districts. Almost two-thirds of the vacant parcels and vacant acres within the Columbia Corridor are located in the Central and Columbia South Shore subareas.

Other industrial districts provide a range of parcel sizes and designations. Smaller parcels in general industrial designations are found within the Albina and Central Eastside industrial districts. To larger parcels in general and heavy. The Guilds Lake and Swan Island industrial districts are characterized by larger parcels in general and heavy industrial designations.

Tables 20 through 31 present data on industrial and commercial vacant land within each of the districts. Vacant land designated Open Space or residential are not included in these tables, but are included in the industrial district printouts in the appendix.
