I. INTRODUCTION

The PORTLAND DEVELOPMENT COMMISSION retained JOHNSON GARDNER to prepare an evaluation of residential and commercial retail development opportunities at the PDC-owned western half of “Block 45”, at the intersection of NE Holladay Street and NE Martin Luther King Jr. Boulevard. This report summarizes the key conclusions of our evaluation, as well as outlining demographic characteristics of the market in more depth.

II. EXECUTIVE SUMMARY

The following are key findings and conclusions from this assignment:

- Over the next several years, JOHNSON GARDNER considers housing to be the highest and best use of Block 45. Portland’s speculative office market is significantly overbuilt, and current achievable lease rates are insufficient to justify new construction. The market will need to recover and effective rents rise for several years before a new speculative office building is supportable. In addition, parking charges in the Lloyd District for office space are currently insufficient to justify structured parking. The retail market is relatively solid, but ground floor space without adequate parking has been slow to lease in projects such as The Merrick.
- The condominium market has been extremely strong over the last several years in the Central City, with rising prices providing room for a project in the Lloyd District to deliver product at a price advantage vis-a-vis more established urban residential neighborhoods like the Pearl District. Market rate rental apartments have been somewhat less successful, requiring a significant discount relative to Westside locations rendering them difficult to underwrite. To-date, there have been few tax credit projects in the Lloyd District, but this use may provide a better return for rental product.
- JOHNSON GARDNER finds no major market obstacles to development of either market-rate rental apartments or condominiums at the subject property given currently available information. The site has a number of residential development advantages including proximity to Downtown and the Pearl District. It is also on the MAX line and close to the planned Eastside Streetcar extension. The primary marketing challenges for the site include noise, isolation from Martin Luther King Jr. Boulevard and safety perceptions. The site offers relatively straightforward pedestrian access to the Lloyd Center regional mall, a few blocks to the east.
- JOHNSON GARDNER anticipates that Portland’s longer-term economic outlook is more positive than present, and thus in-migration will likely pick up. However, we expect that mortgage rates will increase from below 6% currently to the range of 8%-9% over the next few years, putting for-sale condominium development more at risk of a slow-down than rental apartment development.
- Market demographics at the subject site are expected to roughly mirror existing trends in the Central City. U.S. Census data and the 2002 PDC-Portland Business Alliance Downtown Housing Study indicate the majority of Central City residents are single, well-educated, likely rent, do not have a family and are employed downtown.

- As a result of the weakened economy and a surge in new construction, occupancy fell significantly in the Central City apartment market over the past year. In the first quarter, vacancy was at a nine year high of 9%. An additional 675 units are expected to come on-line in the next year and occupancy in the market is expected to remain below 95% well into 2005.
- The Central City condominium market continues to exhibit strength as record-low mortgage rates fuel new development. Popularity of attached product has spread, with such development now occurring in the Downtown/Mid-Town, University, and Lloyd Districts and the new South Waterfront Central District. In the future, the risk of upward mortgage rate creep puts this particular product type at more risk of slowdown than apartments.
- Surveyed Central City market-rate apartments currently achieve average rents between \$1.10 and \$1.95 per square foot. JOHNSON GARDNER anticipates that base rent levels at the subject property would be at the lower end of this range (i.e. \$1.20 per square foot base price given the project's distance from a wealth of amenities compared to Downtown projects). Upper-floor premiums would allow substantial rent additions for higher units, pushing average project rents closer to \$1.35 per square foot.
- Market-rate condominiums are presently selling at prices between \$202 and \$337 per square foot. The subject property would likely achieve base prices in the middle end of the range, though view premiums would also apply. We predict sales between \$225 and \$280 per square foot would be achievable at this location.
- The economics of residential development make it increasingly difficult for new residential projects to achieve price points that can tap middle-income households (\$35,000 to \$75,000 depending upon household size). The result is that for both rental and ownership product, growing pent-up demand for middle-income downtown employees, if tapped, would ensure a highly successful project. Specifically, larger, non-loft-style condominiums priced below \$200,000 and market-rate apartments renting for \$750 to \$1,200 per month.
- Assuming development economics continue to generate pent-up workforce housing demand in the competitive market area, development at the subject property of roughly 150 market-rate rental or for-sale units would be expected to see full absorption within a year given our estimates of incoming supply.
- Ground floor retail development at the subject property has market potential given high visibility, access to the MAX line, and proximate residential and office development. Vacancy rates at surveyed location in the Lloyd District vary between \$14 and \$23 per square foot (Net) and have occupancy rates close to 84%.
- The subject property would likely achieve the mid-range of mixed-use/ground floor retail lease rates, primarily due to traffic volumes on Martin Luther King Jr. Boulevard. Rents of \$16 to \$20 per square foot triple net is likely, with some upside depending upon successful execution of residential development at the subject property.

III. THE SUBJECT SITE AND THE COMPETITIVE MARKET AREA

Subject Property

The subject site is a 0.5-acre vacant parcel at the northwest corner of NE Holladay St. and NE Martin Luther King Jr. Boulevard in Portland's Lloyd District. The PDC-owned property, which is

part of “Block 45,” is adjacent to a low-rise office building and the mid-rise Cascadian Court Condominiums, which were completed in 2001. It has several locational strengths that could be leveraged by a residential/commercial development at the site:

- Convenience to the Portland Central Business District (CBD) and the greater region with proximity to both MAX and Interstate freeways;
- Marketable river and city skyline views;
- Walking distance from Lloyd Center and the Broadway/Weidler retail corridor as well as the East Bank Esplanade;
- Excellent visibility from I-5 as well as the Oregon Convention Center and Rose Garden Arena, which attract over two million visitors to the area annually;
- Proximity to the planned Portland Streetcar Eastside extension; and
- Location near the proposed new Convention Center hotel at the corner of Holladay St. and Martin Luther King Jr. Boulevard. This hotel facility along with other PDC plans to invest in the area should support increasingly intense use in the district.

In addition to these qualities, as will be discussed in more detail below, the subject property is uniquely located at the eastern periphery of Downtown (the Close-in Westside) and the western periphery of the Close-in Eastside. As a result, the property could be expected to attract residents from both of these housing markets.

Competitive Market Area

With its convenient location and a price point lower than many inner city neighborhoods, a development at Block 45 would attract existing residents from across Portland’s city center. With this in mind, the Competitive Market Area used in this report assumes demand for the project from both *Close-In Westside* and *Close-in Eastside* sub-markets. We discuss general characteristics of these two markets below.

Close-In Westside

During the last decade, Portland’s close-in Westside experienced a number of major changes. New developments along the South Park blocks in the 1990s and in the Pearl District in recent years have significantly altered the competitive environment. The Pearl District has displaced Northwest Portland as the leader in terms of residential desirability, bolstered by an increasingly well-developed entertainment and restaurant scene. The level of residential development in the district has allowed for a marked increase in available services as well, including retailers such as REI, Whole Foods and a planned Safeway store to name a few. The planned relocation of Portland Center Stage to the old Armory Annex building in the Pearl will further enhance the marketability of lifestyle and residential development in the district.

Over the past two years, the Downtown Core and University District have exhibited growing residential development activity as urban living has enjoyed a resurgence. Projects such as The Mosaic, The Eliot Towers, Museum Place, The Saint Francis and the planned Riverplace Partners project have materialized with market appeal for households employed in the CBD and in the immediate vicinity of Portland State University, specifically. Considerable expansion of PSU over the

next decade bodes well for continued health of this residential submarket, while its superior pedestrian and public transportation linkage with downtown employment to the north actually provides a competitive advantage over the Pearl District for a segment of the residential market.

Close-In Eastside

Portland's Close-in Eastside gentrified considerably over the last two decades. Laurelhurst, Alameda, Irvington and Ladd's Addition have emerged as some of the most affluent neighborhoods in the city, with increasing demand for the Sullivan's Gulch, King and Overlook neighborhoods. Homes in these neighborhoods are primarily single-family with some older middle-income apartments and duplexes on the fringes. Build-out in these areas has limited new construction, although there has been some recent in-fill development of townhomes.

The Lloyd District, with relatively little housing, and more vacant land, is the primary location for new multi-family housing construction in the Close-in Eastside. Apartment projects including Lloyd Place, Buckman Terrace and the Cornerstone were built in the district in the late 1990s and now enjoy high occupancy. The Merrick, the latest apartment development on NE Multnomah, targets a higher price point than these slightly older projects and appears to be somewhat less successful in its lease-up to date. New condominiums in the district include Cascadian Court, built in 2001, and 1620 Broadway, scheduled for completion later this year. The 1620 Broadway building has been particularly popular and has already pre-sold over 40% of its units.

IV. ECONOMIC OVERVIEW

The following section provides an overview of economic trends that will influence the market for residential and commercial development at Block 45.

Regional Economy

Portland metropolitan area employment fell by 9,800 jobs, or 1%, in the first quarter of 2004--a modest improvement over the first quarter of 2003, when employment dropped by 16,900 jobs, or nearly 1.8%. The trend on a monthly basis is definitely improving, with a return to positive growth expected by the second quarter. The region continues to lag behind the nation, which has experienced 1.5% positive job growth so far this year. Although local employment is stabilizing, it remains well below pre-recession levels. In March 2004, employment grew by 2,600, but was 2,500 below March 2003, and 14,100 below March 2002. The regional economy has been on the verge of recovery the last two quarters and is expected to rebound sometime in 2004.

Employment losses during the last year have been widely distributed, reflecting a general decline in most major industry sectors. The manufacturing sector reported the greatest magnitude of losses, while the information and financial activity sectors reported the greatest percentage declines. Government had modest growth, mostly attributable to hiring in local education. Construction also grew, largely due to increased housing demand on account of continuing low interest rates.

1/ Trade, Transportation, Warehousing & Utilities

Job gains in February and March, along with improving national economic indicators and job trends, provide some hope for broader job recovery by late 2004.¹ Our forecast continues to assume that the Portland metropolitan area will benefit from a national expansion, although lagging national growth rates. The region's rate of population growth is projected to exceed employment growth, leading to a sustained period of relatively high unemployment. With an estimated local rate of 7.6% in March, the local rate exceeded the national rate of 5.6% significantly. While this should theoretically slow the rate of in-migration, the metropolitan area's relative affordability on the West Coast may allow this differential to continue. Similarly, slow adjustment and recovery in export related industries is likely to keep regional unemployment high in the near future.

As the following figure demonstrates, local economic weakness is having little measurable effect upon residential construction activity. In 2003, metro-area residential permitting recorded its highest level since 1997 with 14,631 units, 36% of which were attached product (rental and for-sale attached).

¹ Oregon Employment Department, *2003 Employment Trends Show Ripple Effects*

SOURCE: Bureau of the Census and Johnson Gardner
 *2004 data include permit activity through Feb.

The primary explanation for the continued residential construction surge is twofold: higher ownership rates due to continued low mortgage rates and the relative affordability of the Portland metro area on the West Coast. Of the two, Portland's relative affordability stands to change the least over the longer term given historical economic and demographic patterns. The following figure provides a comparison of current home prices in the western United States.

SOURCE: National Association of Realtors and Johnson Gardner

As the following figure demonstrates, home ownership rates in Oregon finally began to grow over the last decade after falling between the 1960s and 1990. Oregon has lagged behind the nation in home ownership growth; only between 1980 and 1990 did the U.S. see a decline in home ownership. The deep structural conversion of the Oregon economy from agriculture and timber to manufacturing and services between 1970 and 2000 largely explains the discrepancy.

The following figure does, alternatively, demonstrate the powerful effect of low mortgage rates on homeownership as well. The data indicate that for every 0.5% decrease in 30-year rates, home ownership rates increase by 0.2% and vice versa. The Portland metro area housing market has benefited from this particular effect immensely, given the flurry of residential construction activity despite Portland's present stature as the most economically sluggish in the country.

SOURCE: Federal Home Loan Mortgage Corporation and U.S. Census Bureau

Outlook

Local employment gains, along with improving national economic indicators and job trends, support expectation for broader job recovery over the coming year.² Our forecast continues to assume that the Portland metropolitan area will benefit from a national expansion, although lagging national growth rates.

Mortgage rates, which more than anything have bolstered the local housing market, will creep upward over the next several months, though not dramatically. Long-term rates are determined by demand and supply of long-term debt instruments, largely by Asian central banks such as those of Japan and China. Because those two countries desire to keep their currency strong – to keep a surplus trade balance and render domestic capital assets expensive to foreign investors – the U.S. dollar will be propped up by their purchase of long-term U.S. debt for artificially low interest rates.

Over the next several years, however, mortgage rates stand to increase to the 8% to 9% range as economic recovery, wage inflation and higher short-term rates signal confidence in the U.S. economy. Two scenarios for Portland are possible:

² Oregon Employment Department, *2003 Employment Trends Show Ripple Effects*

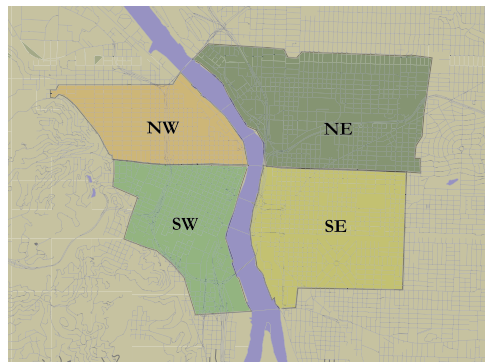

- *Higher Likelihood:* Portland metro area begins to add jobs at a greater pace, i.e. keeps up with the country as a whole, local in-migration and housing demand should sustain the ill effects of upwardly creeping mortgage rates.
- *Lower Likelihood:* Portland job growth fails to keep up with the U.S. over the long-haul, thus eroding residential market strength.

V. DEMOGRAPHIC CHARACTERISTICS

The existing demographic makeup of Portland's City Center provides insights as to potential households that would be interested in living at the Block 45 site. This section summarizes recent downtown Portland demographic trends using both U.S. Census Data and a recent Downtown Housing Survey.

Census Data Trends

Johnson Gardner used 2000 U.S. Census data to profile residents in close-in Northeast, Southeast, Northwest and Southwest Portland neighborhoods. We pooled information for these four regions with the assumption that Block 45, given its central location, would attract residents from across the City Center. The table below includes data collected for each of these neighborhoods as well as summary information for these areas in aggregate.

Of the 56,012 residents in close-in Portland's City Center, 53% are men and 47% are women. 19-39 year-olds make up 49% of the population followed by 40-64 year-olds, whom comprise 33%. Children under 18 and seniors over 65 are 8% and 10% of the population, respectively. Median Family Income in the area is \$28,854. The majority of housing (83%) consists of rental apartments, while only 17% is owner occupied. Non-family households (59%) greatly outnumber family households (33%).

Residential Characteristics	Southeast	Northeast	Southwest	Northwest	Total
Total Population	10,824	16,017	15,281	13,890	56,012
Age					
0-18	12%	11%	6%	6%	8%
19-39	48%	44%	50%	53%	49%
40-64	33%	34%	31%	32%	33%

Median Household Income	\$34,133	\$33,040	\$21,428	\$28,085	\$28,854

Source: U.S. Census 2000

Downtown Housing Survey Trends

In addition to U.S. Census data discussed above, JOHNSON GARDNER studied results from a recent downtown housing survey so as to better characterize potential residents at the subject site. This survey, commissioned by the Portland Business Alliance, in conjunction with the Portland Development Commission, profiled downtown workers and residents, including those from the Lloyd District.³ The survey was conducted as a component of the Greater Portland Downtown Housing Report, and was completed by Moore Information. It included random telephone interviews of 460 downtown workers in April 2002, with similar interviews conducted of downtown residents during the same month.

Following is a summary of selected findings from this survey⁴:

Perception of Downtown Quality of Life

Most study area workers and residents say the quality of life downtown is good or very good. These results mirror those of the Business Census and Survey conducted by APP, which indicates that most workers believe downtown is relatively safe and clean. Older residents and workers and those with higher incomes and more education are the most likely of all respondents to say it is very good.

Characteristics of Downtown Residents

- 63% of those surveyed live alone. 26% live with one other person. Of those living with additional household members, 69% live with a spouse and 19% live with roommates.
- Only 16% of surveyed residents live in households with children under the age of 18.

Reasons for Working or Living Downtown

³ The study area for this survey was slightly different from the area used in our census calculations above. It does not include locations west of I-405.

⁴ Greater Portland Downtown Housing Report – Executive Summary

- Going shopping and visiting restaurants are the top two reasons study area workers stay downtown after work.
- Nearly 80% of study area workers would prefer to keep working downtown if they could keep their same job. People with advanced degrees are most likely to prefer to keep working downtown.
- Study area workers perceive the proximity to a wide range of activities, including jobs, and the ability to access them without driving as the biggest benefits of living downtown.

Housing Preferences

- 14% of study workers currently live outside the downtown area, but would consider moving into the city center.
- Of those study residents living downtown, 26% live in studios and 32% live in one-bedroom apartments.
 - Once residents move downtown, they are inclined to stay there. Roughly a quarter of surveyed residents have lived downtown for more than 10 years. 60% of all surveyed residents plan to continue living downtown for the next five years.
- Study area workers who are not interested in moving downtown most frequently cite cost issues and satisfaction with their current neighborhood as the biggest reasons for not moving downtown.
- Overall, the most important housing amenities for workers and residents are basic features such as a washer & dryer, parking, amount of square footage and number of bedrooms. A deck or balcony also ranks high with both groups. Lowest-ranking features include a doorperson, pool and fitness center.

Commute Characteristics

- 34% of surveyed downtown residents walk or bike to work, while 28% drive and the remainder carpool or take public transportation.
- Over half of downtown residents surveyed have less than a fifteen-minute commute.

VI. RENTAL RESIDENTIAL MARKET TRENDS

Portland/Vancouver Metro Area Apartment Market

This section summarizes trends in the Portland-Vancouver metropolitan area's rental apartment market, as well as our forecast of demand for the next twelve months. The focus of this report is on market-rate developments, and the inventory reflects a comprehensive inventory of market-rate rental apartment projects of 15 or more units.

The metropolitan area rental apartment market showed signs of tightening during the first quarter, with overall occupancy rising 0.5%. This reverses a six-quarter slide in occupancy. With interest rates expected to rise over the next year, competition from ownership products should diminish. Leasing activity is reportedly picking up, with rent levels starting to rise. Norris Beggs & Simpson reports a 2.2% rise in average rents during the first quarter, reflecting a 9.1% annualized rate. Investment activity in existing apartment complexes has been robust, with 47 transactions reported during the first quarter.

The overall market occupancy rate was estimated at 92.4% at the end of the first quarter of 2004. Current estimated occupancy rates range from 91.3% in Beaverton/Aloha to 93.3% in the Clark County subregion. The range in occupancy rates by subregion has narrowed considerably, with markets that appeared to have weathered the general weakness now showing relatively high vacancy levels. New construction outside of downtown Portland remains largely limited to tax-credit projects, with achievable lease rates insufficient to justify new market rate construction. A surge in new construction in the Central City has already started to weaken that market, with projects reporting both higher vacancy as well as substantial price discounts.

RENTAL APARTMENT MARKET TRENDS / MARKET-RATE UNITS

Net absorption is projected to outpace new supply in 2004, for the first time since 2000. Overall market conditions are expected to improve through 2005, with average occupancy exceeding 95% by mid-2005. Depressed rent levels will keep new construction to a minimum until there is a substantial shift in achievable rents. With a rising interest rate environment and local economic expansion expected, a significant shift in rents would be expected in the latter half of 2004 and 2005.

Projections

Over the next year, we forecast that demand will exceed new supply, with most new supply in suburban markets being income-restricted. The overall occupancy rate is projected to rise modestly to 92.9% through the first quarter of 2005. In a reverse of recent trends, the close-in markets are expected to be relatively soft, with significant recovery in the suburban markets. The following table summarizes current and projected market conditions by major subregion in the metropolitan area:

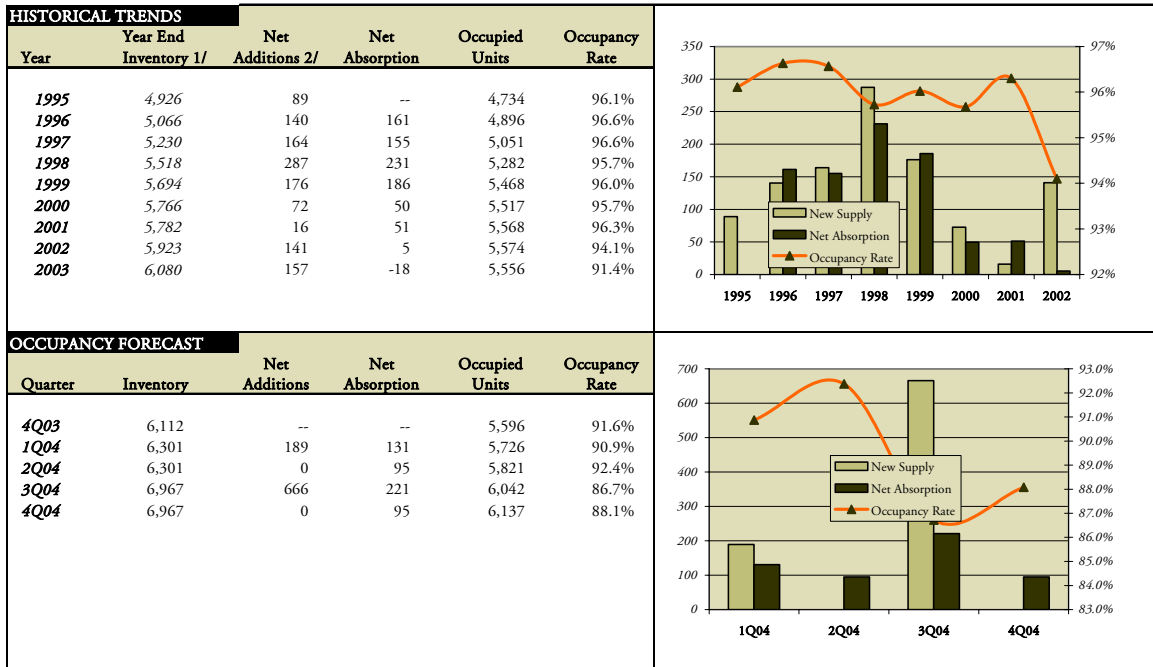

CURRENT AND PROJECTED MARKET CONDITIONS

Submarket	1Q04		New Supply	Net Absorption	1Q05	
	Inventory	Occupancy			Inventory	Occupancy
<i>Beaverton/Aloha</i>	16,977	91.3%	0	559	16,977	94.6%
<i>Hillsboro/Tanasbourne</i>	14,879	92.5%	426	489	15,305	93.1%
<i>Tigard/Tualatin/Wilsonville</i>	12,903	93.0%	0	163	12,903	94.2%
<i>Sunnyside/Clackamas</i>	5,313	93.1%	0	176	5,313	96.4%
<i>Lake Oswego/West Linn</i>	4,921	93.2%	10	120	4,931	95.5%
<i>Oregon City/Gladstone</i>	7,237	92.6%	0	105	7,237	94.0%
<i>Gresham/Troutdale</i>	20,738	91.6%	380	554	21,118	92.6%
<i>Close-In Westside</i>	9,761	92.7%	855	447	10,616	89.4%
<i>Close-In Eastside</i>	12,289	92.5%	960	564	13,249	90.0%
<i>Central City</i>	6,112	91.6%	855	541	6,967	88.1%
<i>Clark County</i>	20,885	93.3%	479	577	21,364	93.9%
Metro Area Total	132,015	92.4%	3,965	4,294	135,980	92.9%

Lloyd District Trends

Block 45 is part of the Central City rental apartment market, which includes Downtown, Close-in Northwest, and the Lloyd District. Over the last decade, the Central City housing market underwent dramatic change as a result of cooperative efforts between the development community and the City of Portland. The public and private partnership has resulted in the successful marketing and development of urban living, with associated cultural and lifestyle amenities. Recent success is best represented by the emergence of the Pearl District, as well as affordable housing construction in the Downtown Core.

The Pearl District had an estimated 1,764 residential units as of April 2003, of which only 602 were rental units according to the last formal survey.⁵ The estimated vacancy rate in the district was 2.7%, well below the metropolitan-wide average, as well as the broader Central City average. The wider Central City area, which includes the CBD and Chinatown, has a total of over 10,200 rental units, of which over 4,200 are income-restricted.

For eight of the last nine years, the Central City had an occupancy rate of 95% or above. As a general rule, a rate of 95% suggests a healthy, stable market. In the last year, occupancy fell significantly as a result of the weakened economy and a surge in new construction. An additional 675 units are expected to come on-line in the next year and occupancy in the market is expected to remain below 95% well into 2005.

Until recently, limited new supply of market-rate apartments in the Central City area has largely been the result of development economics pointing to for-sale attached as highest and best use given mortgage rates, development costs and demographics. As a result of ownership's predominance, rental housing for middle-income households and to a lesser extent upper-income households⁶ is lacking in the Central City, representing the greatest potential for untapped, or pent-up, apartment demand in the study area. New market rate rental supply currently in the pipeline appears to be largely targeting the upper range of the market, with price points at or exceeding those of Kearney Plaza in the Pearl District. The cost of structured parking is a reliable hurdle to delivering apartments at lower price points close-in. Accordingly, untapped market opportunity at the subject property, as will be discussed later in this document, will likely be this unmet need for middle-income households working close-in.

⁵ Portland Business Alliance, 2003 Spring Downtown Occupancy Report.

⁶ Middle-income and high-income households are more inclined to own rather than rent. However, rental units for these demographic groups are lacking based on analysis discussed later in this summary, as well as in the technical appendix.

As compared to the City Center at large, there has been less new construction in the Lloyd District. A handful of newer projects, including the recently completed Merrick, cater to relatively high-end renters similar to new downtown developments. Like the greater City Center, there appears to be untapped demand amongst middle-income households in the area. This is evident from Eastside projects built in the late 1990s, which charge rents lower than the newest projects and enjoy nearly full occupancy.

Peer Group Analysis

A total of fourteen existing market-rate apartment developments were identified as comparables for the purpose of this market analysis. The projects comprise 2,341 units, with an overall occupancy rate of 92%. The average rent level in the survey was \$1,003 per month, reflecting rents of \$1.30 per square foot. The following table outlines the basic market characteristics summarized for the market-rate projects in our survey, with more detailed information outlined in the appendix of exhibits.

COMPETITIVE PEER GROUP COMPARISON, CENTRAL CITY APARTMENTS

Project Name / Location	Unit Characteristics		Units	Occupancy	Monthly Rents	
	Total	Size (S.F.)	Occupied	Rate (%)	Price	Price/S.F.

1/ Museum Place began lease up in fall of 2003

2/ Includes 40 affordable units

3/ The Merrick began lease-up in April 2004. It is not included in the total vacancy calculation.

Survey results suggest some current weakness in the City Center rental apartment market. These projects charge rents at or near the top of the market, while their average occupancy is below 95%, which is typically the rate associated with balance in the market. Vacancy in newer units is generally higher than in older units. Museum Place, the newest rental apartment community in the Westside, presently has a 70% occupancy rate, skewing the sample occupancy rate downward somewhat. As of April 2004, the project had leased 105 of 140 units since it opened in October of 2003. At current pace, lease-up of the project may require a full year.

With the exception of River Place Square, which has townhouse units with attached garages, all of the projects surveyed rent parking outside of the basic rent structure. The typical charge for covered and secured parking is \$65 to \$95 per month for residents, with some projects leasing space to non-residents at a substantial premium.

In general Eastside projects charge less than Westside projects, although the Merrick, a new luxury apartment complex on Northeast Multnomah, is at a price point above more seasoned Westside developments. The Merrick opened in April of 2004 and after a month of lease-up is only 15% occupied. Its quoted rents dropped by nearly \$0.20 per square foot in the last month, suggesting there is currently little support in the Eastside market for product above \$1.30 per square foot. The Merrick is only 2 blocks away from Block 45 and is probably the best indication of potential apartment performance at the site.

VII. OWNERSHIP RESIDENTIAL MARKET TRENDS

Portland/Vancouver Metro Area Residential Ownership Market

The overall market beat last year's strong first quarter pace by a modest 1.3%, with strong attached product demand offsetting flat detached activity. Attached sales volume was 14.5% higher than during the first quarter of 2003, while detached volume was 0.3% lower. The overall sales volume during the quarter was 6,390 units, of which 12.5% were attached.

Prices rose significantly during the first quarter, with average pricing for new product in the Westside roughly \$20,000 per unit higher than reported during the fourth quarter of 2003. The average sales price of new detached product was \$377,000 on

the Westside, \$300,600 in Clark County and \$256,200 on the Eastside. New attached product averaged \$231,100 on the Westside, \$204,800 on the Eastside and \$163,100 in Clark County.

Units priced below \$200,000 accounted for 54.6% of all activity during the first quarter, with units priced below \$300,000 accounting for 82.4%. Attached housing continued to prosper as a low-price housing alternative, accounting for 27% of all sales priced below \$150,000 and 34% of all sales priced below \$125,000. These levels are largely consistent with trends during the fourth quarter of 2003.

Demand Forecast

A near-term demand analysis was prepared in order to determine the potential market depth for ownership housing in the Portland-Vancouver metropolitan area. The analysis is based on existing and projected demographics within the region, as well as observed construction and sales patterns. Regional demand is allocated to subregions based on historic patterns, permit data, and intra-metropolitan area trends. Demand was segmented into nineteen price categories. Overall net demand for ownership housing is projected to be 8,900 net new units over the next twelve months, with modestly rising interest rates being offset by the return of local economic growth. The following is a summary of current and projected demand in each of the for-sale residential subregions.

PROJECTED OWNERSHIP RESIDENTIAL DEMAND – 1Q04-1Q05

Geographic Subregion	Projected Net New Demand	Percent of Total	Demand by Price Range (\$ Thousands)					
			Under \$125	\$125 - \$199	\$200 - \$299	\$300 - \$399	\$400 - \$499	Over \$500

Lloyd District Trends

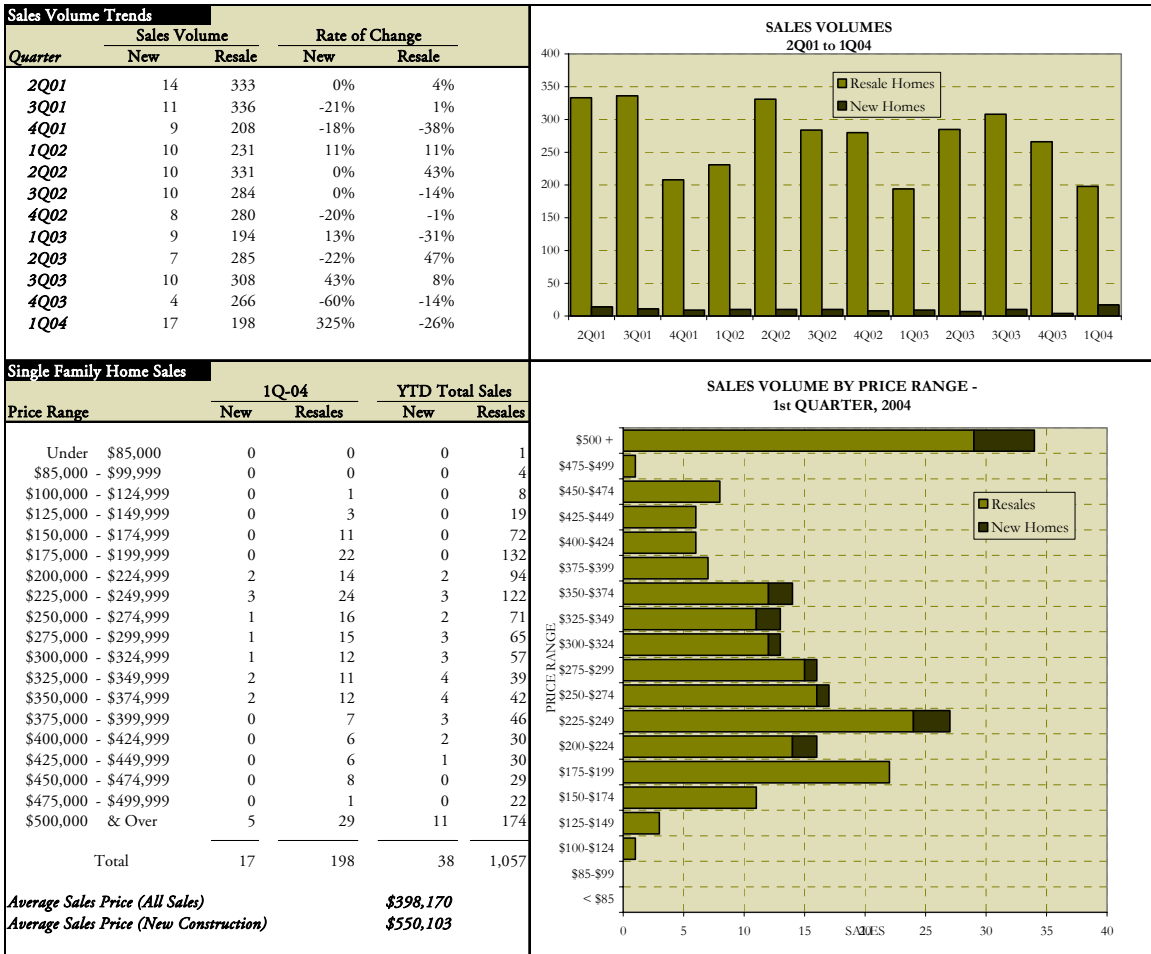

There are relatively few condominium developments in the Lloyd Districts. Sales at these projects are generally considered in the context of the greater downtown market, which has grown rapidly in recent years.

Condominiums have been the dominant development form downtown over the last decade, with new condominium projects built in the Pearl District, Mid-Town, University District, and Goose Hollow areas. Net absorption of these projects has reportedly been strong, with many of the projects largely pre-sold prior to completion. Anecdotal evidence is that this is largely true, but that higher-priced units, i.e. penthouse-type product in top floors have not sold as well with the exception of The Henry. Alternatively, McCormick Pier Condominiums, an apartment rehab project, has achieved dramatic sales pace with its first phase nearly sold out, largely because of its lower price point relative to new construction projects. As many of the other projects are still under construction, and no transaction can be recorded until completed, the reported sales cannot be considered hard sales as of yet. Sales agents report that a number of their pre-sales are to households currently living in the area and moving up, and the sale of the new unit may be contingent upon an assumed sale of the current unit.

Overall market activity for attached product is concentrated in the below \$250,000 range, however market strength is exhibited in units priced greater than \$500,000.⁷ New projects currently under construction in the Pearl District are priced in excess of \$330 per square foot, pushing prices well above the \$300,000 level for most units. As of the first quarter of 2004, the average sales price for new condominium and townhouse construction downtown was \$358,500 with average price for new units and resales topping out at \$483,500. Although sales prices are impressive, averages are likely skewed upward somewhat by more infrequent sales of top-floor, multi-million dollar units.

Given the large concentration of high-end condominiums downtown, new condominiums on the Eastside target a lower price point, typically \$50 to \$100 per square foot less than those in the Pearl District. These Eastside projects have been popular with budget conscious first-time homebuyers as well as empty nesters. Their sales have been relatively strong, although presales are somewhat slower than recent downtown projects.

⁷ RMLS

Peer Group Analysis

Johnson-Gardner identified eight recent condominium projects as comparables for the purpose of this market analysis. These projects comprise 755 units, with a 64% average sales rate. Four of them are still under construction and the others were completed within the last four years. Both Downtown and Eastside projects were selected to establish relative pricing in these areas.

Of the projects surveyed, the Henry is unique in that it has sold out before completion. Its average market price per square foot is \$302, with considerable variation. Cascadian Court delivers the highest value with average unit size of 728 square feet and average price per square foot at \$202. The Mosaic, located in the University District, is the vanguard of new attached for-sale product in the submarket, averaging \$297 per square foot with average unit size at 681 square feet and no parking. On the Eastside, the 1620 NE Broadway building, currently under construction, is indicative of the potential for a well-executed project in the area. Approximately 40% of its units have already been sold. The following table outlines the basic market characteristics summarized for our selected market-rate projects.

Project Name/ Location	Unit Characteristics					Sales Characteristics			Price/ (S.F.)	
	Number		Size Range			Price Range				
	Total	Sold	Low	High	Average	Low	High	Average		
<u>Downtown</u>										
Mosaic	40	28	454 - 1,050			681	\$134,900 - \$320,000		\$202,425	\$297
<u>Pear District</u>										
Park Place	124	52	725 - 2,715			1,381	\$206,000 - \$1,171,000		\$452,780	\$328
The Edge	124	70	842 - 2,028			1,504	\$240,850 - \$724,000		\$345,084	\$229
The Elizabeth	180	108	884 - 3,293			1,302	\$296,300 - \$1,325,000		\$433,918	\$333
The Henry	124	124	755 - 2,945			1,409	\$199,000 - \$1,180,000		\$474,694	\$337
<u>Eastside</u>

1620 NE Broadway	88	35	844 - 2,247			1,237	\$199,750 - \$786,450		\$343,271	\$278
Totals/Averages:	755	483	771 - 2,396			1,109	\$189,608 - \$863,278		\$334,639	\$302

SOURCE: Johnson Gardner LLC

Based on this survey, Johnson Gardner predicts that condominiums at the Block 45 site could potentially sell between \$215 and \$280 per square foot. The site is well situated amongst low-rise buildings, and would have substantial view premiums above the fourth or fifth floor.

VIII. ABSORPTION AND PRICING

The following section provides a discussion of potential market reception of residential development at the subject property. It gauges potential new competition in the market area and quantifies potential residential unit demand

Future Residential Supply

Rental Apartments

There are approximately 3,177 apartment units proposed for the Central City. In the next three years, 2,518 rental apartment units are expected to enter the Central City market based on future development activity anticipated by PDC, various local press reports and prior research by JOHNSON GARDNER. Expected new supply is considerable, given that since 1998, the market area has averaged 150 new market-rate apartment units annually while retaining a healthy occupancy rate of roughly 95%. The table below outlines selected projects with known completion dates.

RENTAL HOUSING PIPELINE, PORTLAND CENTRAL CITY, 2004 FORWARD

Project	Number of Units	Location	Status	Scheduled Completion
Residential Mixed Use Bldg	141	1613 NE Weidler St	Final Planning	2004
The Burlington	32	900 NW Lovejoy St	Start	2004
Lexis Apartments	14	1125 NW 9th Ave	Start	2004
10th & Hoyt	175	NW 10th and NW Hoyt	Start	2004
The Tower at Station Place Apartments	176	NW Ninth & NW Lovejoy	Start	2004
South Pearl Apartments	246	NW 12th & Couch	Planning	2004
Albina Fuel Site Apartments	310	3246 N.E. Broadway	Planning	2005
Macadam Student Housing	250	North Macadam Riverfront	Planning	2006
Wesbild	300	N.W. 14th & Marshall	Planning	2006
PDC Unnamed	60	S.W. 3rd and Oak	Planning	2006
PDC Unnamed	60	S.W. 3rd and Salmon	Planning	2006
Trammell Crow Unnamed	200	S.W. 5th and Harrison	Planning	2006
North Macadam Residential Tower	250	North Macadam Riverfront	Final Planning	2006
Roosevelt Tower	104	934 SW Salmon St	Final Planning	2006
Macadam Affordable	200	North Macadam Riverfront	Planning	2007

Beyond 2005, the pipeline of apartment development for any market area is somewhat speculative, particularly for mixed-use urban projects like many of those listed above. Apartments may become condominiums or vice versa, project financing may be elusive or other development opportunities may change developer priorities. For the purposes of a conservative demand analysis, however, JOHNSON GARDNER assumes that projects scheduled through 2006 will be delivered as planned and that after 2006, the market area will return to historical averages of 150 new market-rate apartments annually.

For-Sale Attached

Over the next several years, the Central City market area may see up to 4,611 new condominium and townhouse units based on the current development pipeline reports. Through 2006, approximately 2,757 units are expected to enter the market. The table below summarizes selected projects scheduled for completion in the next three years.

FOR-SALE ATTACHED HOUSING PIPELINE, CENTRAL CITY, 2004 FORWARD

Project	Number of Units	Location	Status	Scheduled Completion
Belmont Lofts Condominiums	27	3442 SE Belmont St	Start	2004
1620 Broadway Condominiums	88	1613 NE Weidler St	Start	2004
The Henry Condominiums	125 10	1025 NW Couch St 2222 NW Hoyt St	Start	2004
Meier & Frank Warehouse Convert to Loft Condos	166	1438 NW Irving St	Start	2004
Park Place Condos	124	922 NW 11th Ave	Start	2004
The Embassy (rennovation to condos)	69	2015 NW Flanders	Start	2004
The Avenue Lofts	166	1400 NW Irving	Start	2004
Brewery Block Five - Housing / Retail Tower Condominiums - Hume Court Site	244 34	1120 NW Davis St 8323 SW 24th Ave	Start	2004
NW Thurman Town Homes	5	2484 NW Thurman St	Start	2004
The Pinnacle	176	1030 NW 12th Ave	Start	2005
Elizabeth Lofts	182	333 NW 9th Ave	Start	2005
Envoy (rennovation to condos)	41	2336 SW Osage St.	Start	2005
Benson Tower Condominiums	168	1504-1520 SW 11th Ave	-	2005
RiverPlace Parcel 1- Condos	210	Parcel 1- SW River Parkway	-	2005
North Macadam Condominium Tower - Block 30	500	North Macadam Riverfront	-	2006
North Macadam Residential Tower	200	North Macadam Riverfront	Final Planning	2006
Eliot Tower	222	SW 10th and Jefferson	Final Planning	2006

As with apartment development, the condominium pipeline becomes less firm beyond 2005 due to market condition variability. For the purposes of a market demand analysis for the subject property, JOHNSON GARDNER assumes that the pipeline of condominium development will roughly follow the timeline expressed above through 2006. After 2006, we assume 150 units will enter the market per year, which is consistent with historical trends.

Absorption Analysis

JOHNSON GARDNER'S residential demand analysis is based on both recent market trends as well as the current and projected demographic characteristics of households in the defined study area. Existing and projected households are stratified by age- and income-cohort, which are the best predictors of tenure split. The net change in households by cohort group is converted to structural demand for owner housing units using a matrix of propensities to own or rent by cohort. Structural demand forecasts are then generated, which reflect the net change in households on the basis of tenure, age and income range.

For this particular analysis, our model included a calculation of pent-up demand. The Central City area has historically been considered to be supply-constrained, with a significant amount of downtown employees interested in living in the area if appropriate supply were available. We refer to this type of demand as Workforce Demand in our model.

Our demand model was run for the primary market area including the CBD, River District, Pearl District, South Auditorium District. Results of this analysis are summarized in the following table as well as in the appendix of exhibits.

Structural Demand

The figure below summarizes projected structural demand – new households to the defined market area – over the next five years. Results of the demand analysis indicate a continuation of current trends in the area, as well as additional demand induced by the anticipated new supply in the area.

Demand for renter-occupied housing will largely comprise entry-level professionals working in the CBD and Lloyd District, as well as households seeking an urban lifestyle. Based on the above numbers, however, the economics of new development will place necessary rental rates increasingly beyond the reach of much of the market, i.e. households earning between \$35,000 and \$50,000.

Ownership demand is somewhat different in that households earning above \$100,000 can be expected to continue to power sales based on the results of the analysis. Demand is spread fairly evenly across other income groups with households making between \$35,000 and \$75,000 comprising approximately 30% of the future source of for-sale demand, and buying attached units priced in the neighborhood of \$131,500 to \$213,000.

STRUCTURAL DEMAND PROJECTIONS: PRIMARY MARKET AREA, 2003-2008

Rental Housing	5-Yr Net	Affordable Payment 3/		% of	Projected Payment

Mortgage Term 30

% of Income 26.00%

% Financed 80.00%

3/ Assumes 30% of gross income towards rent.

Pent-up workforce demand will account for the bulk of new demand in the area assuming development over the next five years cannot be delivered at price points moderate enough to render them affordable to households in the \$25,000 to \$75,000 range. Roughly half of the estimated demand profile will be from households earning greater than \$50,000 annually, while 30% is estimated to come from households earning greater than \$75,000. This profile is significantly less affluent than that reported by the only major market rate project in the Pearl District, Kearney Plaza. We believe that this discrepancy reflects the relative scarcity of high-end product in the area, and that the overall demographic mix will need to more closely reflect the general market profile as new products enter the market.

In addition to producing an analysis of structural demand, the model also forecasts a demand profile. This profile represents the anticipated profile of overall demand, including turnover demand. The profile of demand is typically more critical for developers, as it better represents the market they will be building towards. In addition, turnover demand is particularly important in an urban setting which is under-supplied, as much of the support for new housing is expected to be drawn from existing residents that would relocate to downtown if appropriate housing was available. The profile of demand, which presents a more relevant analysis, indicates a diverse range of demand sources, in terms of both household income and age.

PROJECTED STRUCTURAL RENTAL RESIDENTIAL DEMAND AND DEMAND PROFILE, PRIMARY MARKET AREA (FIVE-YEAR INCREMENTAL)

Ownership Demand Profile: Structural and Workforce Demand

The following figure provides five-year estimates of both pent-up workforce⁹ ownership housing demand and new structural demand discussed above.

As with rental housing demand, pent-up workforce demand will account for the bulk of new demand in the area assuming development over the next five years cannot be delivered at price points moderate enough to render them affordable to households in the \$25,000 to \$50,000 range. Unmet need for workforce ownership housing is more acute than for rental housing as pent-up demand is estimated to account for 90% of five-year demand potential in the market area. Over half of the estimated demand profile will be from households earning less than \$50,000 annually, with the greatest need for households earning between \$25,000 and \$50,000.

⁹ See previous footnote.

1/ Assumes 26% of gross income towards payment.

2/ Based on the following financing assumptions

Interest Rate 6.75%

Mortgage Term 30

% of Income 26.00%

% Financed 80.00%

3/ Assumes 30% of gross income towards rent.

As expressed above, the vast majority of ownership housing opportunity in the competitive market area recently has been well beyond the reach of the majority of households seeking residential opportunity in the Central City proximate to their locations of employment. The higher costs of mid and high-rise residential development, particularly with structured/below-grade parking, has ensured a wealth of pent-up demand that has not been tapped. Even so, a sizeable demographic earning above \$100,000 can be expected to continue to fuel demand for higher-priced product if properly executed.

Fair-Share Absorption Analysis

An overall market absorption forecast was conducted utilizing the previous structural and turnover demand estimates for both rental and ownership housing. The analysis assumes a project will capture its proportionate share of annual demand based on its own share of total supply on the market. It does not factor in qualitative advantages, which we assume are largely offset by price differences among projects.

Rental Market Performance

Results of the rental absorption projection are presented in the appendix of exhibits and are summarized below. The analysis assumes development of 150 middle-income, market-rate rental apartment units at the subject site with entry into the market in 2006.

<i>Estimated Absorption per Month (1st Year):</i>	9.5 - 11.5					
<i>Estimated time to Lease-up (Months):</i>	13.1 - 15.7					

1/ Exhibit 2.04

2/ Annual turnover of existing rental units in the competitive market area, assuming a 20% turnover rate.

Our model projects total annual leasing activity in the Central City of approximately 8,418 units per year, of which 25% would be for mid-range product and 15% for high-range product (units priced above \$1,300). Projected market activity is allocated to individual projects as well as units in turnover on the basis of their proportionate share of available units each year. As shown, the model projects estimated annual absorption at the subject site between 10 and 12 units per month.¹⁰

¹⁰ Please note that both our rental and ownership absorption analyses include a 150-unit proposed PDC project at Block 49. While the tenure of this project is not yet known, we include it in both models to provide the most realistic forecast for each type of development.

Ownership Market Performance

Results of the ownership absorption projection are presented in the appendix of exhibits and are summarized below. The analysis assumes development of 150 market-rate condominium units at the subject site in 2006.

Our model projects total annual leasing activity in the Pearl District of approximately 1,746 units per year, of which 48% would be for mid-range product and 22% for high-range product (units priced above \$250,000). Projected market activity is allocated to individual projects as well as units in turnover on the basis of their proportionate share of available units each year. As shown, the model projects estimated annual absorption at the subject site between 10 and 12 units per month.

Residential Market Conclusions

Currently available information suggests market success for either market-rate rental apartments or market-rate condominiums. The following are key considerations for this conclusion:

- *The location of the property is suitable for residential development.* The importance of views, proximity to the MAX and the proposed Portland Streetcar extension, and easy access to Downtown, Lloyd Center and Interstate 5 serve as highly marketable amenities.
- *The subject property will have cross-shopping appeal for households seeking residences in either Close-In Westside or the Close-In Eastside.* The property is centrally located for employees in the Pearl District, Downtown, PSU and Lloyd District. Accordingly, residential development at the site can successfully tap demand – cross-shopping appeal - for housing in the Pearl District and Downtown or on the Eastside in ways that development in both distinct submarkets will not.

As a rental apartment project, the development is likely to be capable of achieving base pricing of close to \$1.20 per square foot, with view premiums available for higher stories. The overall pricing mix with premiums should be close to \$1.35 per square foot, assuming strong execution. At this price point, the project will be positioned above the older projects along the South Park Blocks, but below Pearl District rents.

A condominium development on the site would be expected to achieve sales prices in the \$225 to \$280 range on average, assuming mid-range condominium-quality execution. We would recommend relatively small units targeted towards singles and young professionals, with a significant absolute price advantage vis-à-vis Pearl District product. While many of the projects in the Pearl District have successfully targeted the move-down market, the subject project's location is still somewhat isolated and not as proximate to a wealth of amenities like development in the Pearl District and future development planned in the South Waterfront Plan District. Accordingly, the project would more likely appeal to a more price-sensitive market. From a product program perspective, units should be designed to keep size down to allow for a more marketable price point.

Given the longer-term horizon and likely market and financial trends, JOHNSON GARDNER finds that market risk for rental apartment development stands to decrease relative to risk for attached for-sale product at the subject property. The following are key considerations for this conclusion:

- *Mortgage rates stand to return to the 8% range or higher over the next few years.* Record-low mortgage rates and unprecedented access to residential financing have almost solely fueled Portland's remarkable condominium market the last few years. While the economy was in the doldrums, in-migration slowed, though not as much as many analysts expected. The result is that Central City purchases have been driven by the existing, local Empty-Nester "move-down" market, first-time owners seeking affordable loft units and low-mortgage-rate induced rise in the rate of home ownership. A return of economic expansion, inflation fears and resulting higher mortgage rates will reverse this trend over the next several years, sooner rather than later.
- *Rental apartment development can better leverage the Streetcar and MAX amenity, potentially reducing parking need and expense.* Apartment success is more predicated on locational proximity than is ownership development given that relocation costs for renters are far lower than for owners. Accordingly, the subject property's streetcar and rail linkage and central location relative to the Pearl District, Downtown, PSU and Lloyd Center will allow a lower parking ratio. Because of the small parcel size, some surface parking may be necessary, reducing the potential footprint of the building.
- *Rental apartments will likely have greater development flexibility in meeting yet untapped central city housing need, particularly south of Northwest Portland and the Pearl District, than will condominiums.* The economics of new mid-rise and high-rise condominium development

make it difficult to achieve moderate price points for workforce housing in the market area. Although substantial condominium conversion opportunity exists in Northwest Portland, that submarket is unique and more isolated for households seeking homes near downtown, Lloyd District and University District employment. Lower apartment construction costs and greater upside on rental rates contribute to the potential financial advantage.

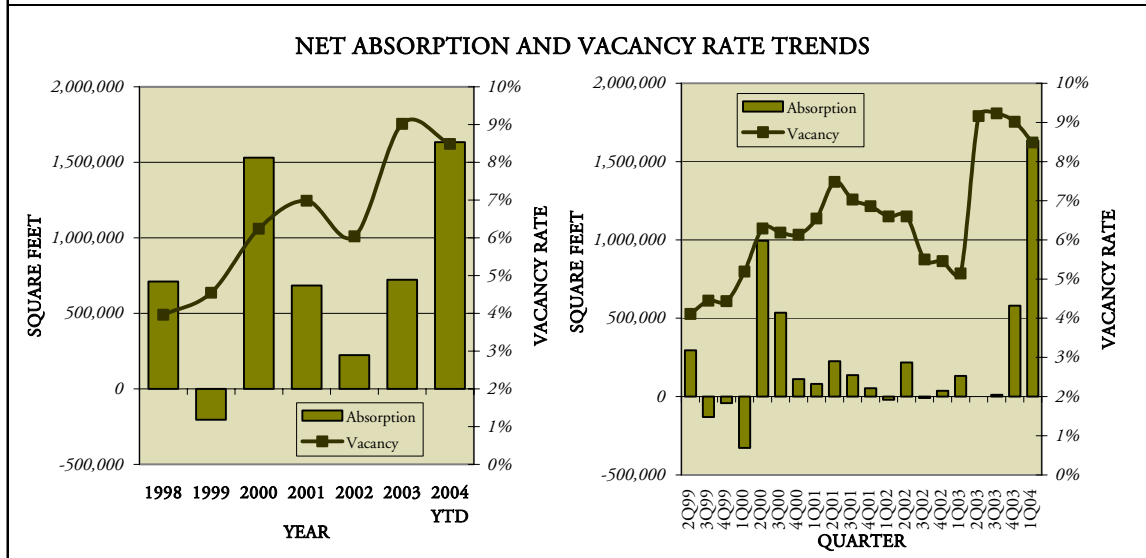

IX. SPECULATIVE RETAIL MARKET

Portland/Vancouver Metropolitan Area Retail Trends

The Portland metropolitan area's retail market continues to see new construction related to the entry and expansion of major retailers. The overall vacancy rate in the retail market is estimated by CoStar at 8.5%, with the highest vacancy rates seen in mixed-use and strip/specialty/urban centers. Norris Beggs & Simpson estimates overall vacancy rates at a more robust 5.1%. Vacancy remains negligible in regional and power centers, while community/neighborhood centers report a relatively healthy 7.0% rate. Tenants continue to drive the market, as expansion by major retailers such as Lowe's, Wal Mart, Target, Dollar Tree and the major grocers driving development.

The Clackamas Town Center is planning a major expansion, adding 240,000 square feet of retail space. Gateway Station will bring 120,000 square feet of retail space, mixed with office and residential space.

	Speculative Inventory	New Construction	Inventory Adjustments	Net Absorption	Vacancy	
					S.F.	Rate
BREAKOUT BY TYPE						
Strip/Specialty/Urban	9,974,902	153,192	5,603,239	833,149	1,672,035	16.8%
Community/Neighborhood	18,219,922	106,000	-6,051,355	-79,263	1,272,111	7.0%
Mixed Use	316,663	0	316,663	69,152	73,634	23.3%
Power/Regional	8,067,709	375,000	-809,479	810,226	86,014	1.1%
Total	36,579,196	634,192	-940,932	1,633,264	3,103,794	8.5%

A total of 480,000 square feet of new space is projected to enter the market over the next twelve months, while demand is forecasted at 500,000 square feet. As a result, the overall vacancy rate is

projected to decline slightly to 8.3% over the next year. The overall vacancy rate is expected to fall to 7.1% by the first quarter of 2006.

Lloyd District Trends

Retail vacancy in the Lloyd District sub-market averages 7.1%. The Lloyd Center Mall, with approximately 1,500,000 square feet, makes up nearly three-quarters of retail space in the area. Excluding the fully occupied mall, vacancy among other sub-market retailers jumps to nearly 25%. Gross rents in the area vary widely ranging from \$6.00 to \$25.00 per square foot (Net). Generally speaking, retail in the Broadway/Weidler Corridor outperforms other parts of the sub-market.

	Speculative Inventory	New Construction	Inventory Adjustments	Net Absorption	Vacancy

Peer Group Analysis

Johnson Gardner identified four Northeast retail locations near the Block 45 site. These selected locations comprise 187,929 square feet and are currently 16% vacant. Their rents vary from \$14.00 to \$23.00 per square foot (Net).

Location	Year Built	Total SF	Vacant SF	Vacancy Rate	Asking Rate	Lease Type
3030 NE Weidler	1989	127,929	0	0%	\$14.00-\$21.00	Net
1200 NE Broadway	1986	26,000	25,000	96%	\$20.00	Net
1500 NE Weidler	1996	18,000	5,194	29%	\$18.00	Net
1127 NE Broadway	n/a	16,000	0	0%	\$23.00	Net
Total/Average		187,929	30,194	16%	\$14.00-\$23.00	

Source: Norris Beggs & Simpson, Retail Market Report, Fourth Quarter 2003

There are relatively few mixed-use residential/retail developments in the Lloyd District, but given available data, Johnson Gardner finds that rents of \$16-\$20 per square foot (Net) would be achievable at the subject site. Plans for a mixed-use development, with some housing component, should be complementary to retail at the location and help it maintain lower vacancy than the 16% rate of these surveyed retailers.
